

KIVI Chair - Big Data Science Master Class

Computer Graphics and Visualization

prof.dr. Elmar Eisemann

10 November 2016

Koninklijk Instituut Van Ingenieurs

[Ritschel, Eisemann, Ha, Kim, Seidel - CGF 2011]

[Kehl, de Haan – Gi4DM 2012]

[Kroes, Post, Botha - PLoS ONE 2012]

Introduction

- Computer Graphics has many applications
 - Architecture/Design
 - Engineering/Medical
 - Education
 - Movies
 - ...

Koninklijk Instituut Van Ingenieurs

Sensors everywhere...

- Big brother is measuring you...

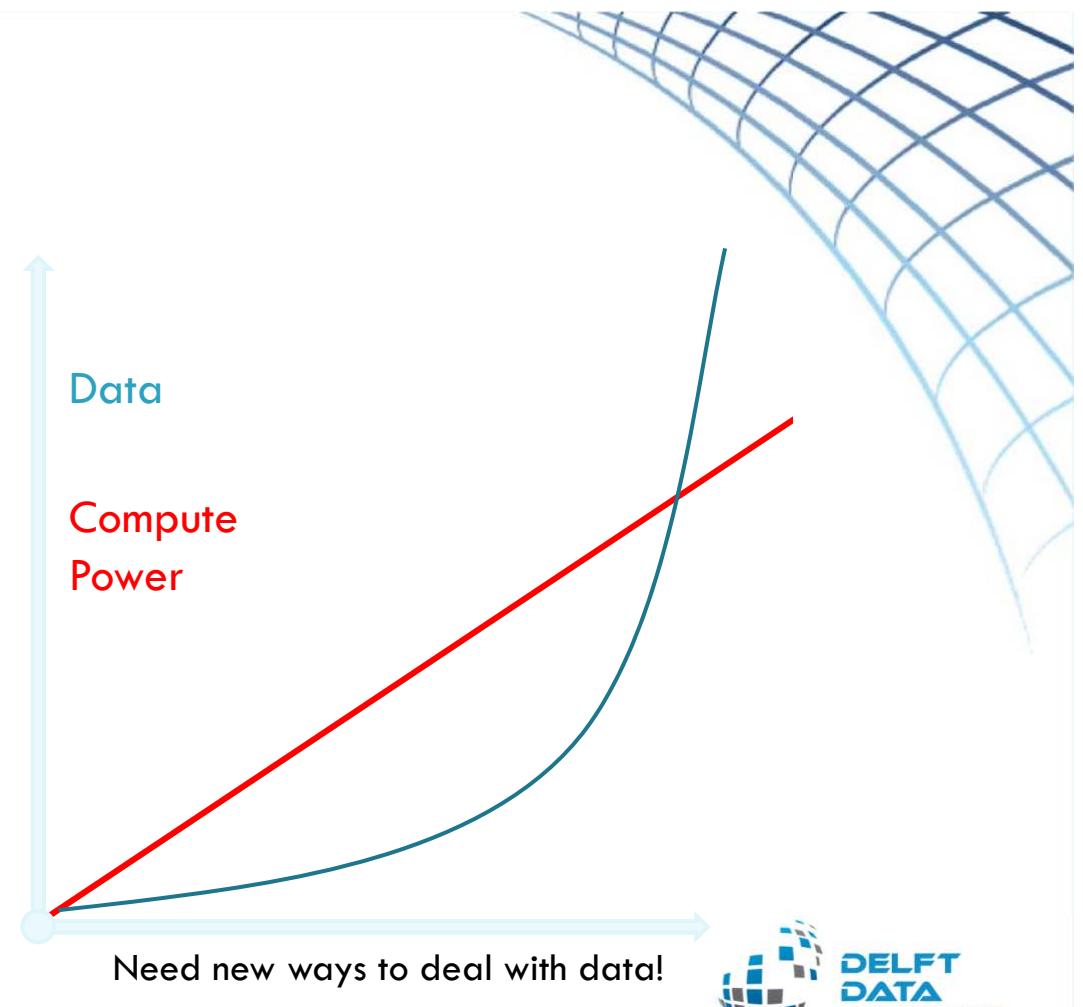

There will be a trillion (!) sensors within the next 5 years...

E.g., Google Earth already stores 21 Million Gigabytes

How can we make use of this data?

Data Development

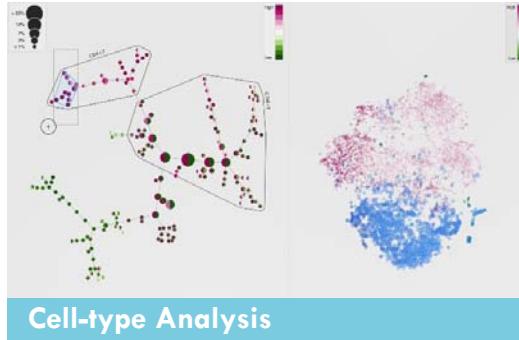

- Processing
- Analysis
- Interaction
- Visualization
- Guidance

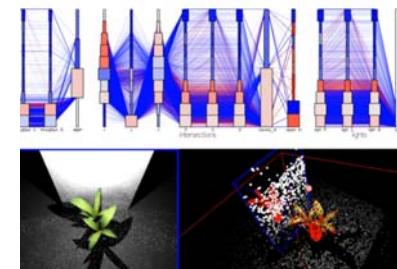

Modern Visualization Systems

Very complex:

- Large-scale Data Handling
- Effective Illustrations
- Responsive Interactivity
- Analysis Solutions

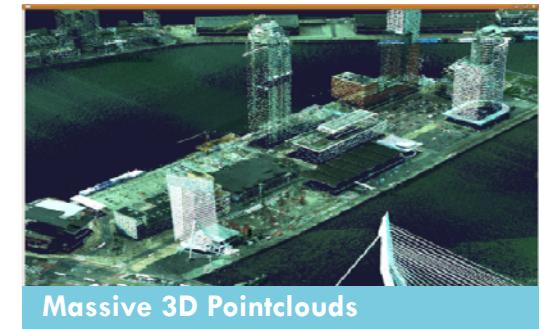

Cell-type Analysis

Light-Transport Analysis

Volume Rendering

Massive 3D Pointclouds

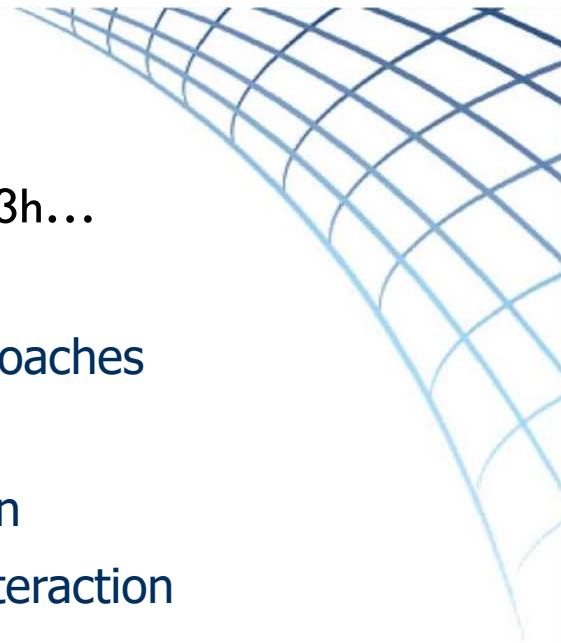

Flooding Simulation

Multi-touch Data Mining

What topics to cover? ...

>20 topics in 3h...

- Realistic Rendering
- Graphics in Data Visualization
- Aesthetic imagery
- Human perception
- Real-time processing
- Real-time large-scale data rendering
- Compression
- Multi-dimensional data
- Analysis (with Machine Learning Components)
- Basic graphics approaches
- Aeronautics
- Object Simplification
- User experience/Interaction
- Solutions used in practice
- Collision Detection
- Fabrication
- Geoscience ...

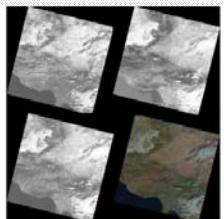

Effective Data Visualization Requires

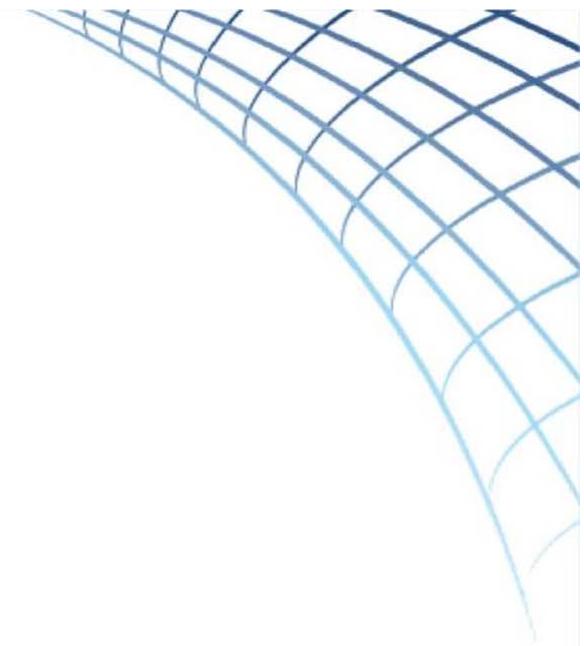

- **Large-Scale Rendering**

- **Visualization and Perception**

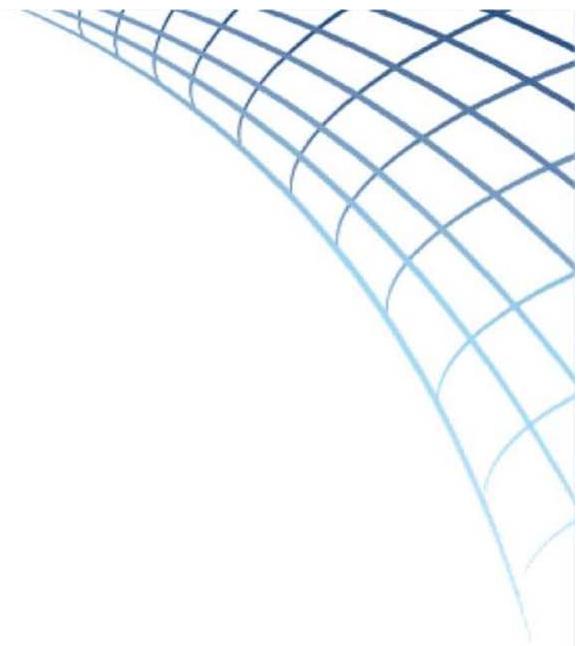

- **Data Analysis**

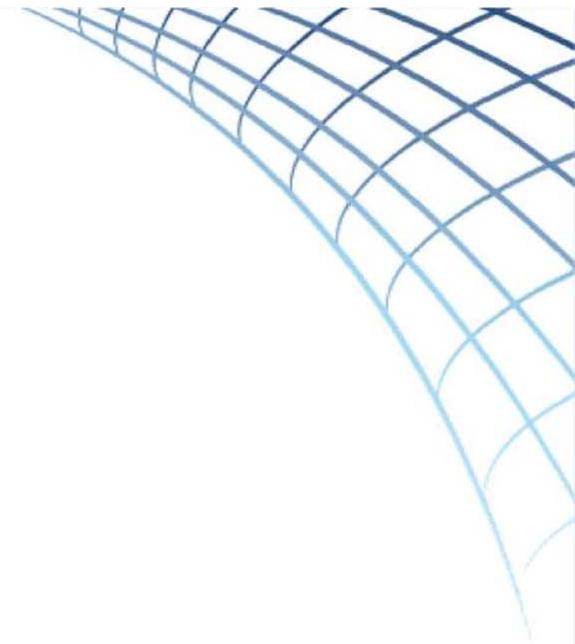

Large-Scale Rendering

- Ray Tracing
- Graphics Pipeline
- Specialized Methods for Different Data Types
 - Height-Field Data, Voxel Data, Data Management, Compression

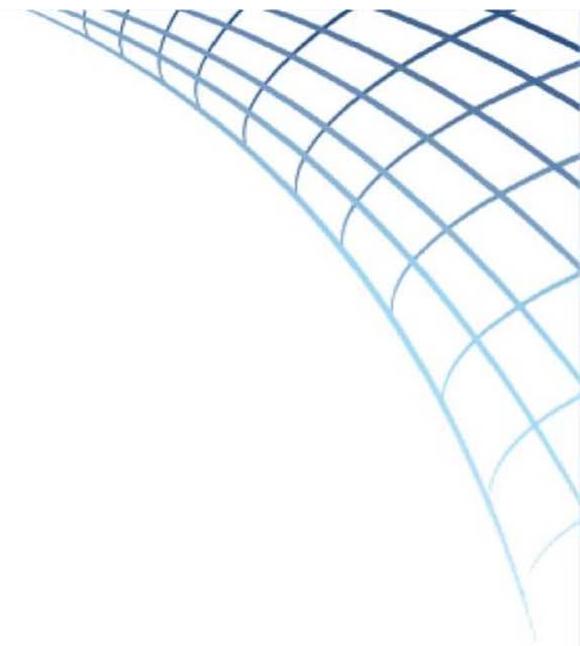

Visualization and Perception

- Realistic Rendering
- Perceptual Methods
- Visualization & Interface

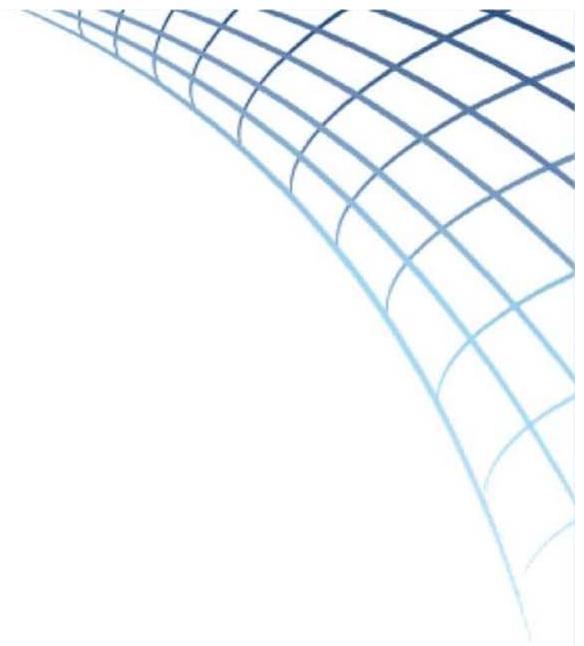

Data Analysis

- High-dimensional/Heterogeneous Data
- Dimensionality Reduction
- Visual Analytics

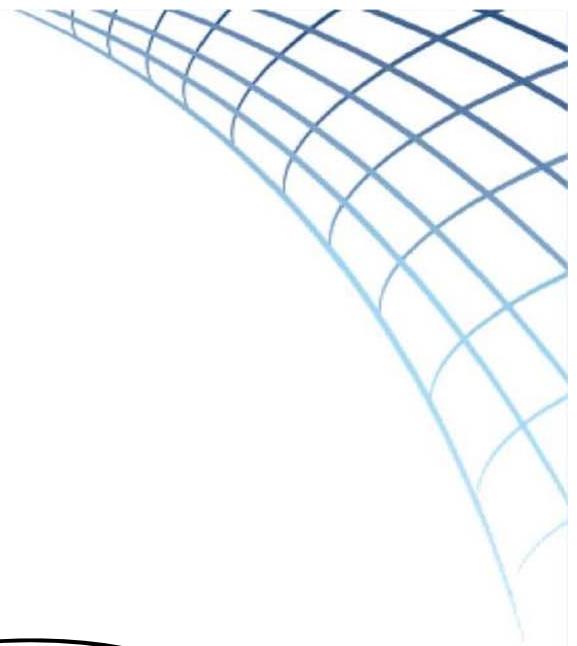

Large-Scale Rendering

- Ray Tracing
- Graphics Pipeline
- Specialized Methods for Different Data Types
 - Height-Field Data, Voxel Data, Data Management, Compression

How to produce an image?

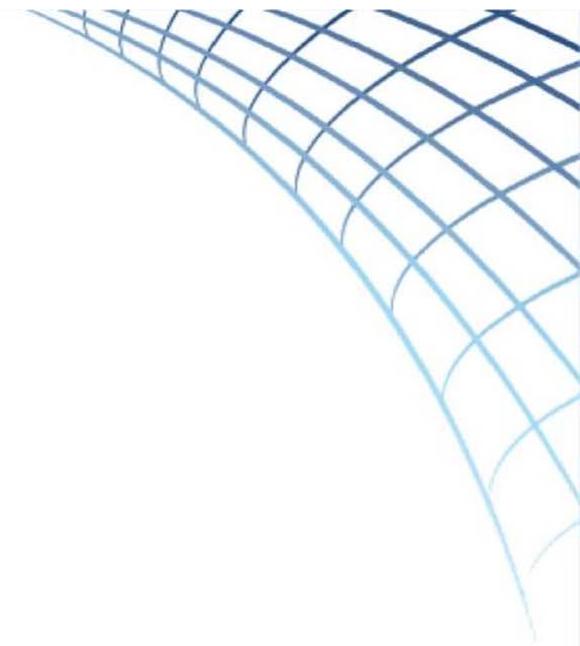

- Computers can only calculate...

Well, what do you expect when you just tell me "10101001101..."

You just don't understand me...

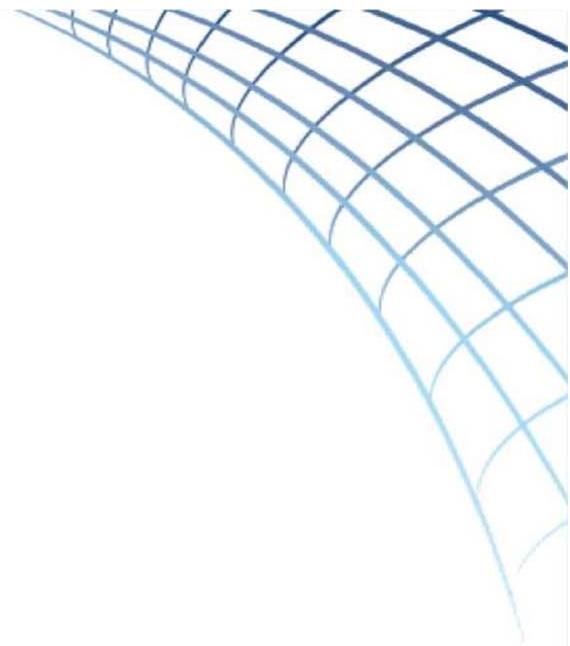

Making images with a Computer

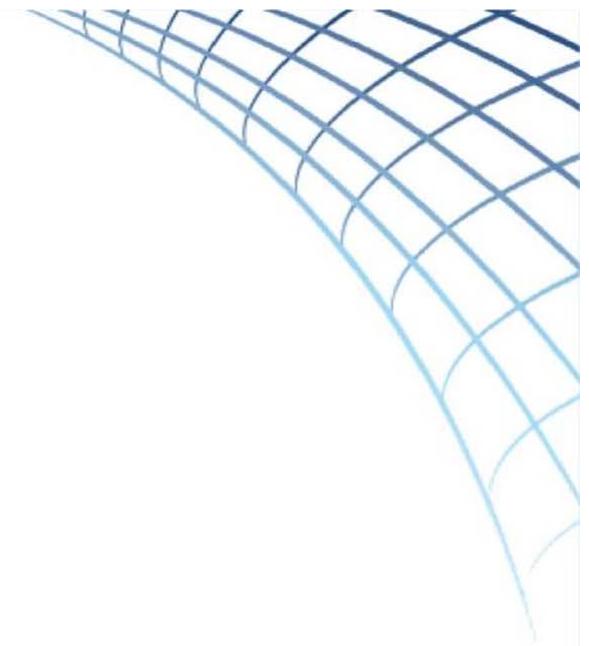

Koninklijk Instituut Van Ingenieurs

Pixel

Koninklijk Instituut Van Ingenieurs

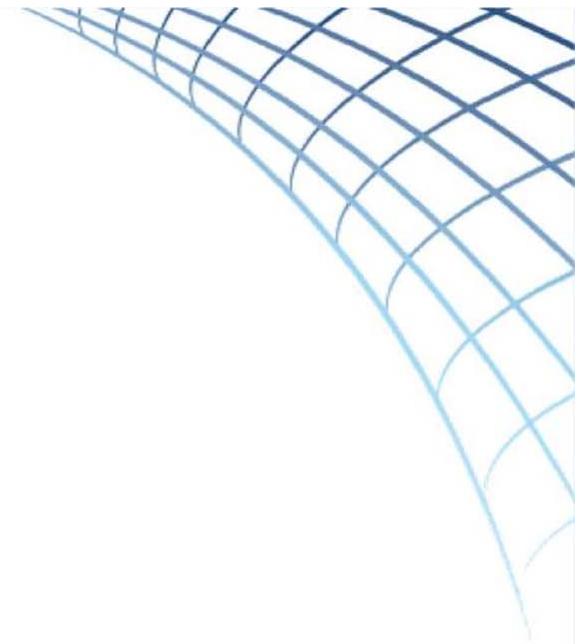

Pixels – Picture elements

- A colored pixel has typically Red Green Blue values.

1 2 3

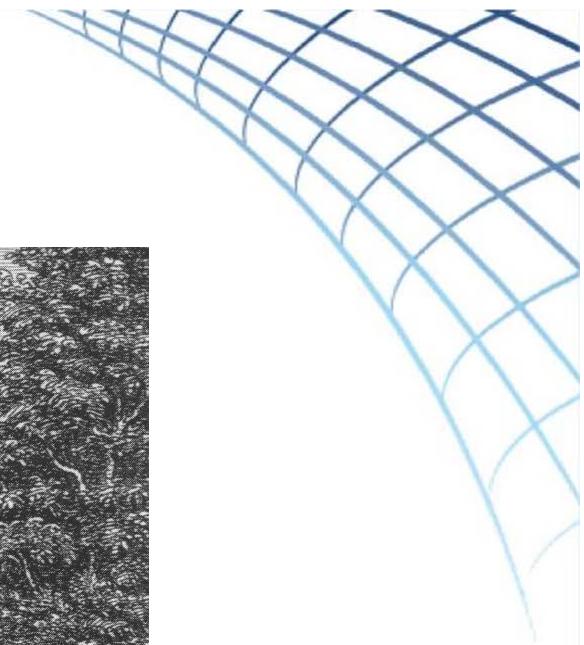

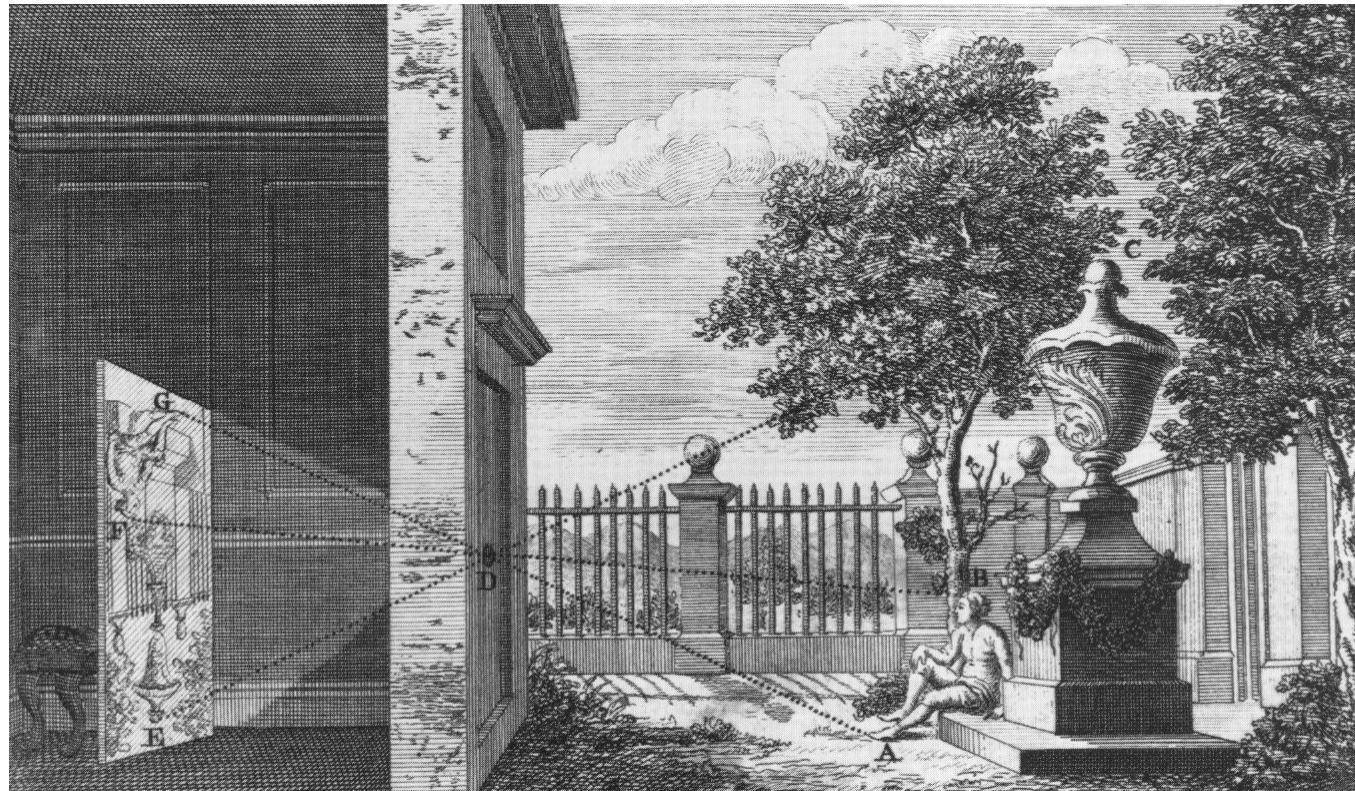

- We color by numbers...
sounds simple...
but choosing the values can be difficult

Producing Images in the Real World

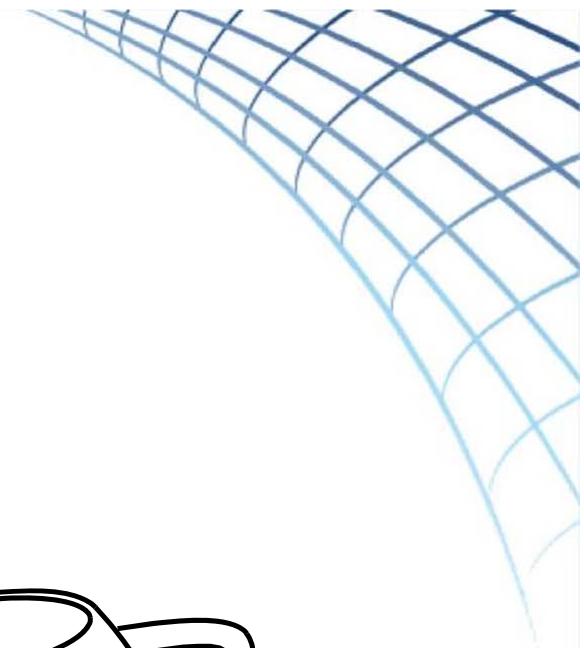

Koninklijk Instituut Van Ingenieurs

Producing Images in the Real World

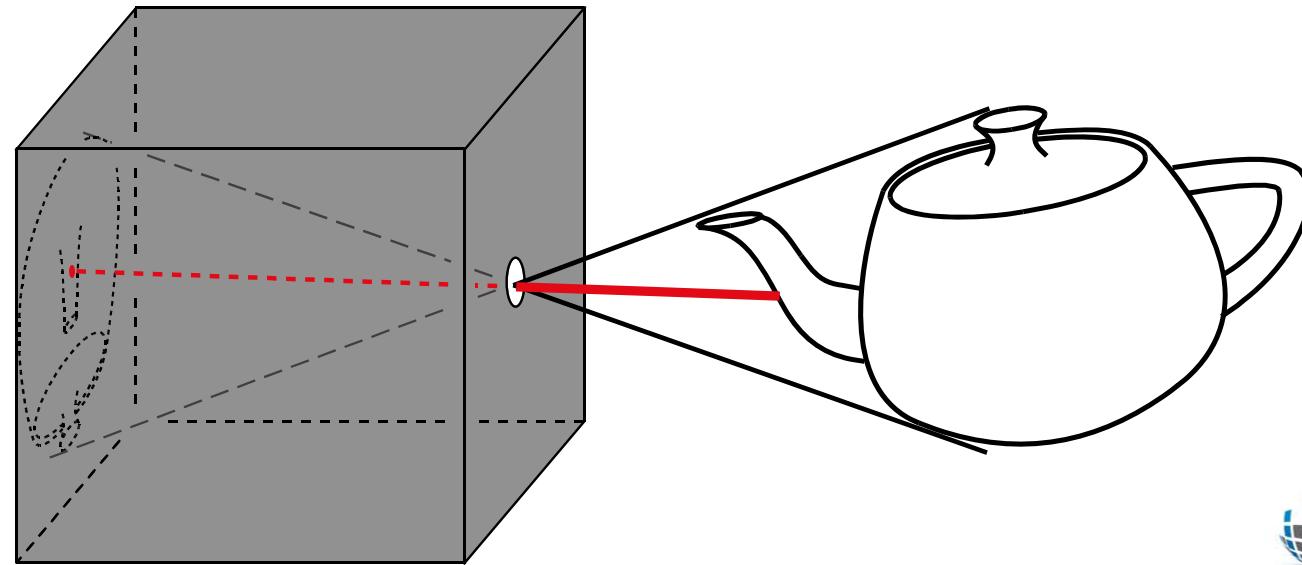

Camera obscura

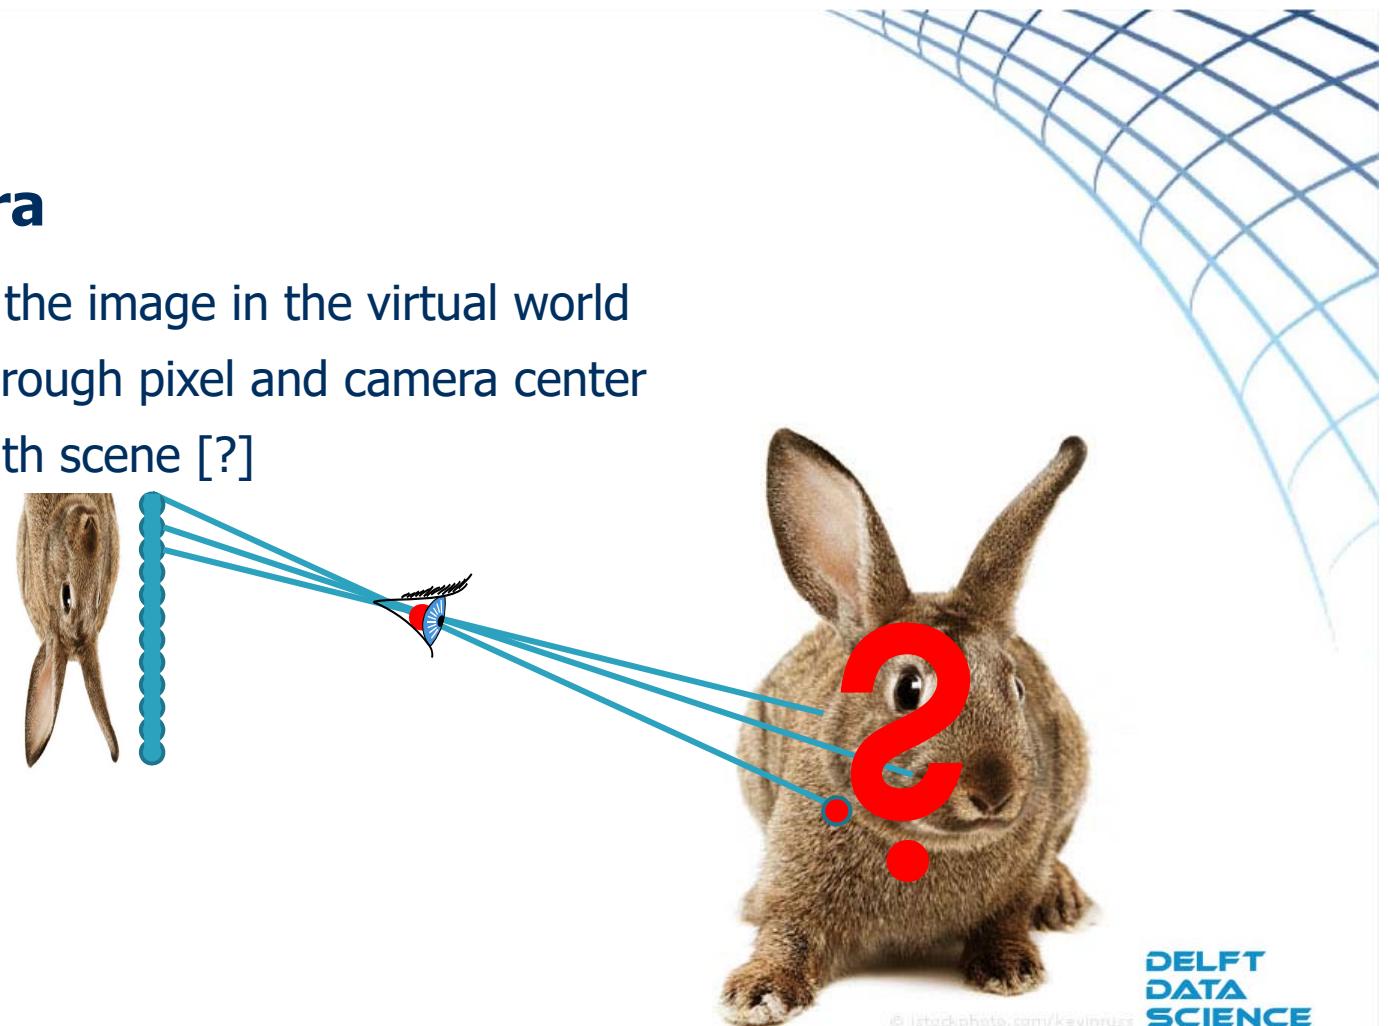

Pinhole camera

- Box with hole
- Perfect image for “point-sized” hole

Virtual Camera

- Take a pixel on the image in the virtual world
- Compute ray through pixel and camera center
- Intersect ray with scene [?]

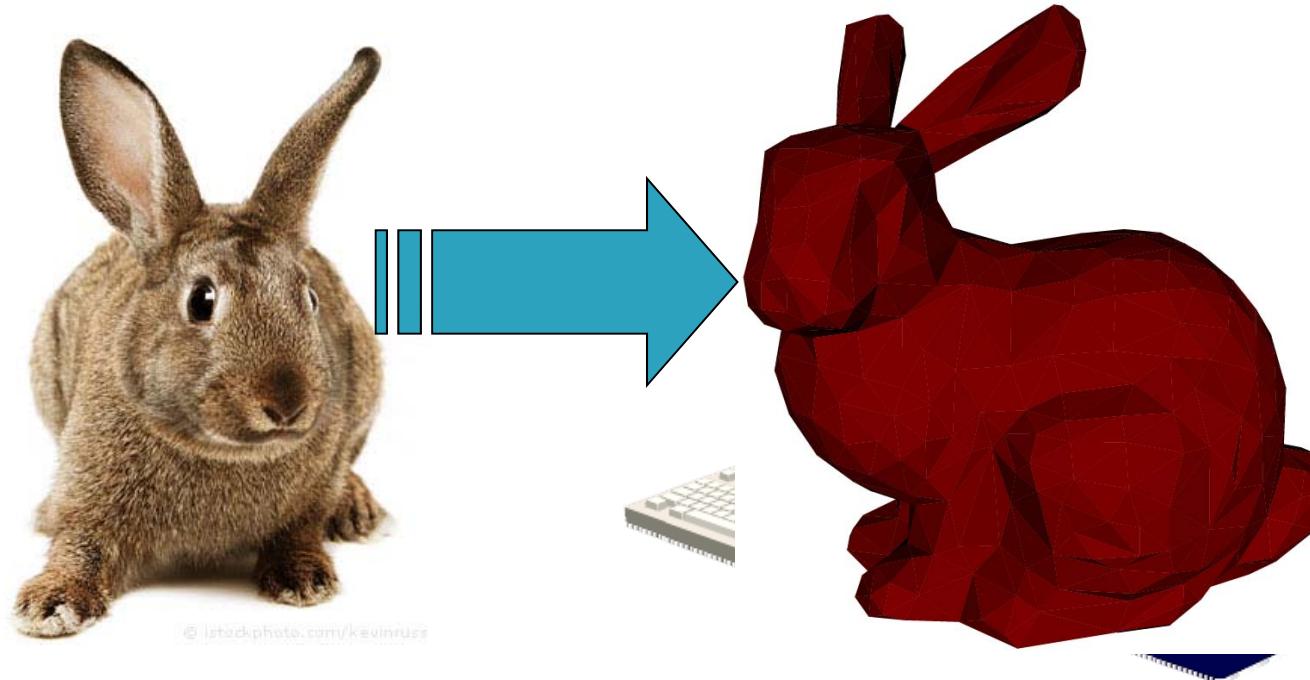

DELF
DATA
SCIENCE

@ istockphoto.com/kevinruss

Koninklijk Instituut Van Ingenieurs

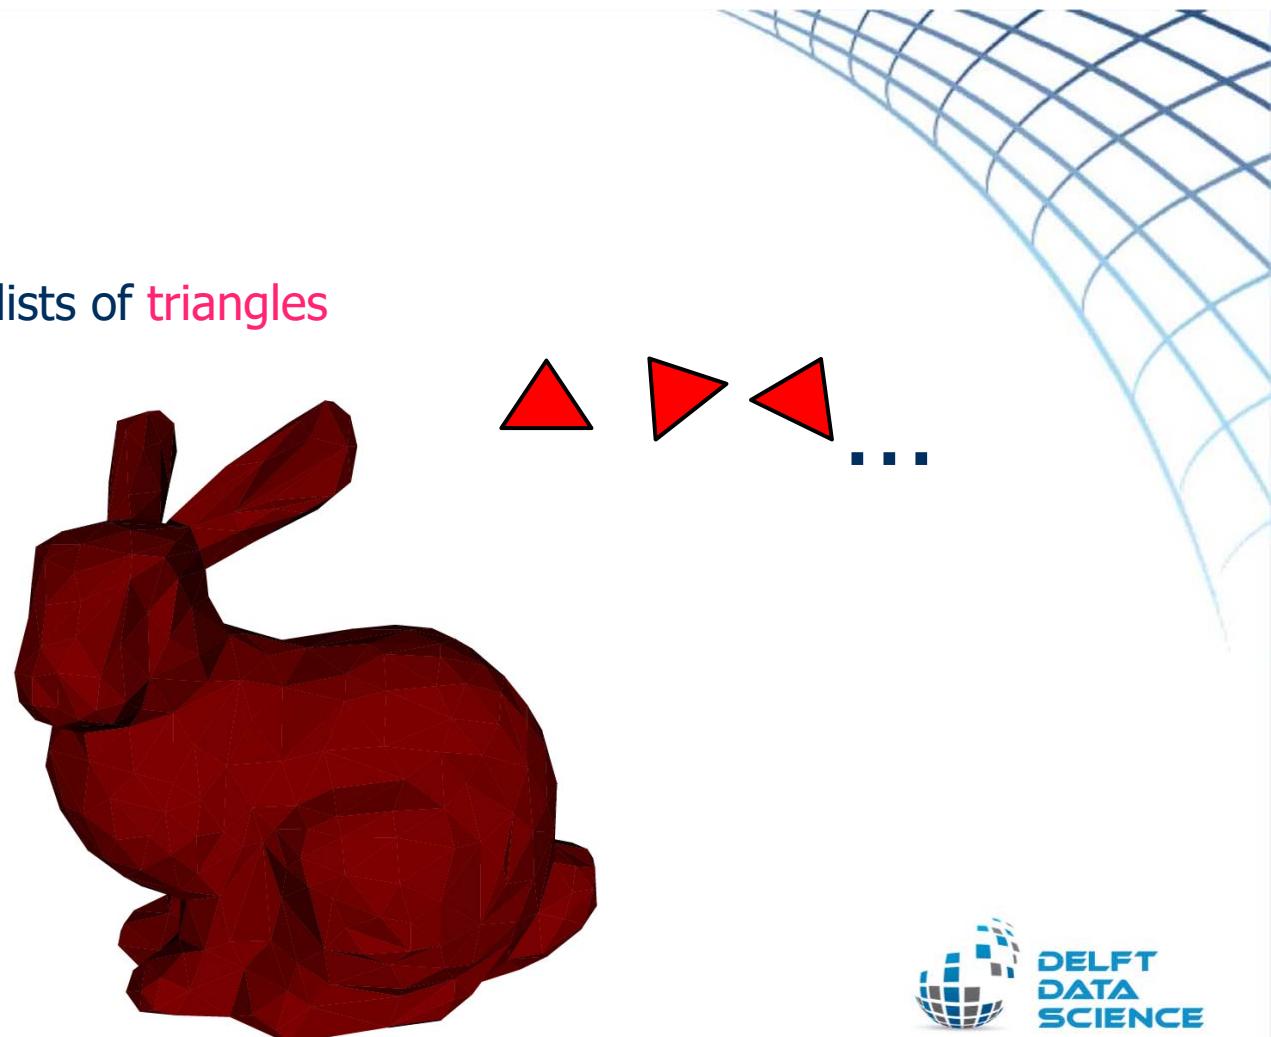

Models

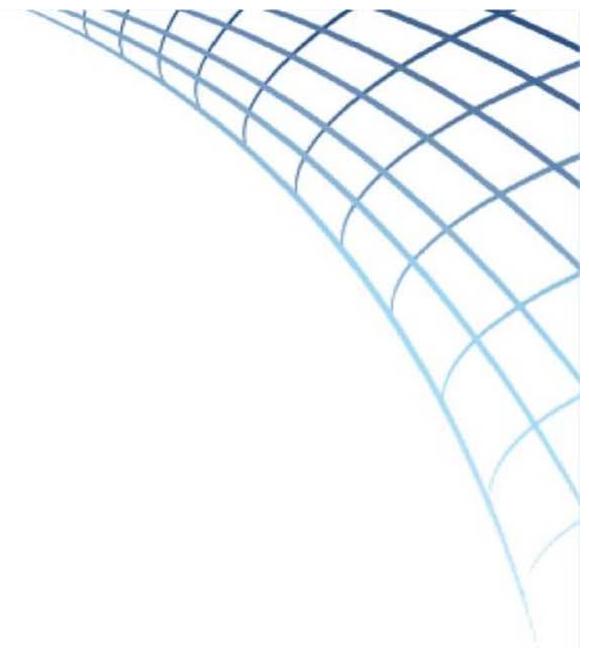

- Representing reality

Models

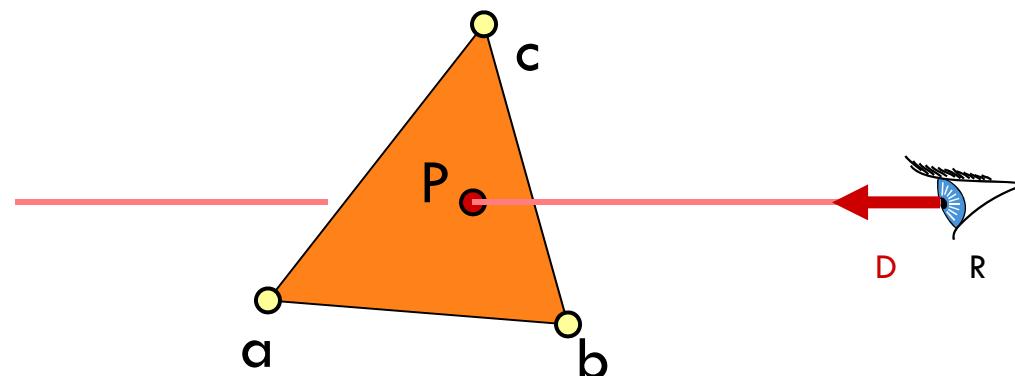

- Models are typically lists of triangles

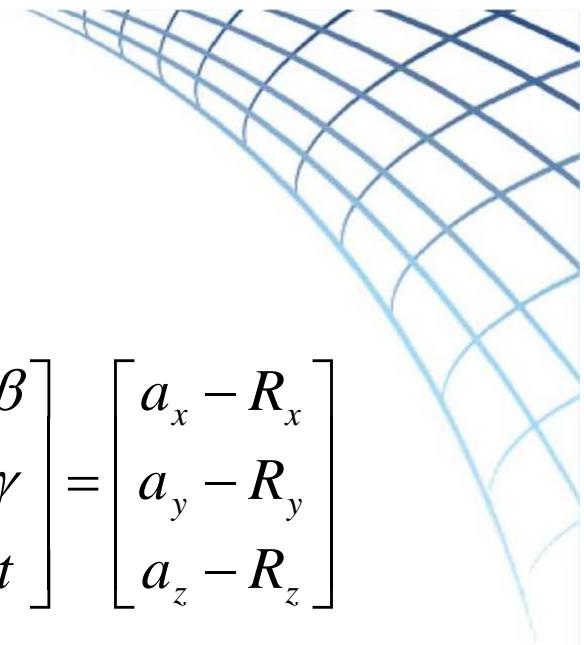

Solve Equations

- $R+tD= a+\beta(b-a)+\gamma(c-a)$

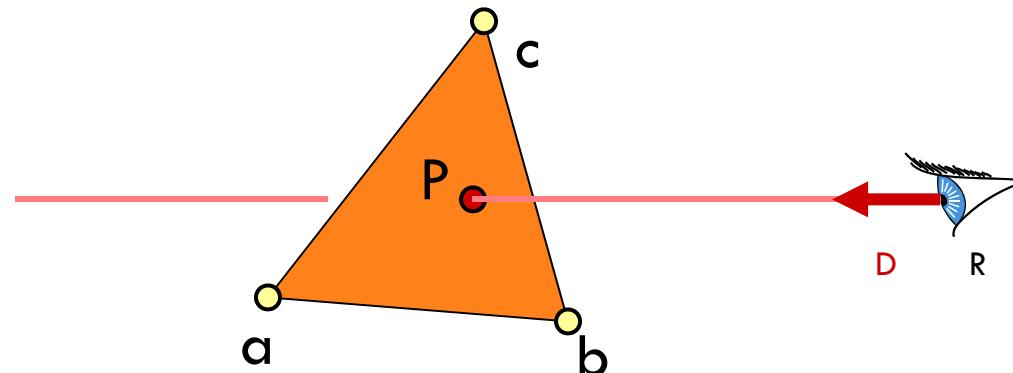

Solve Equations

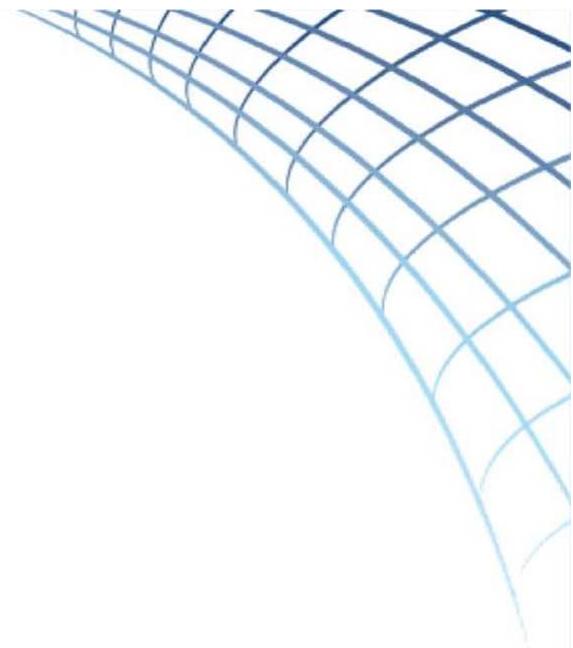

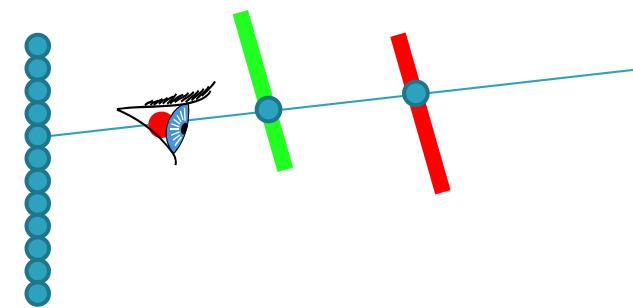

- $R_x + tD_x = a_x + \beta(b_x - a_x) + \gamma(c_x - a_x)$
- $R_y + tD_y = a_y + \beta(b_y - a_y) + \gamma(c_y - a_y)$
- $R_z + tD_z = a_z + \beta(b_z - a_z) + \gamma(c_z - a_z)$

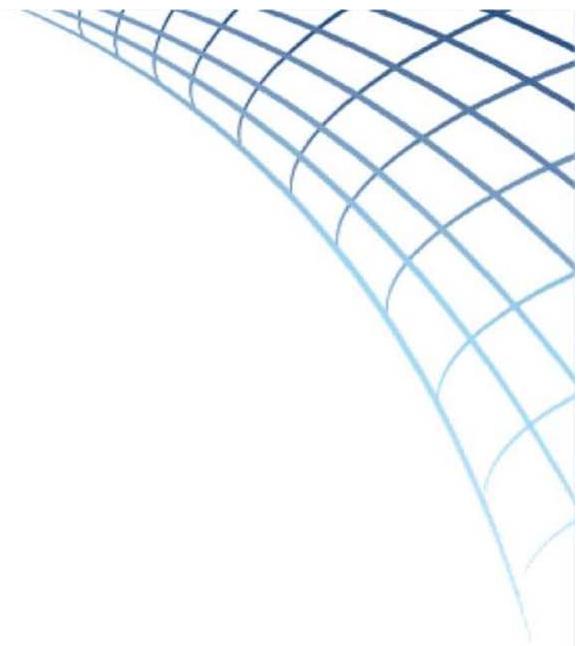

$$\begin{bmatrix} a_x - b_x & a_x - c_x & D_x \\ a_y - b_y & a_y - c_y & D_y \\ a_z - b_z & a_z - c_z & D_z \end{bmatrix} \begin{bmatrix} \beta \\ \gamma \\ t \end{bmatrix} = \begin{bmatrix} a_x - R_x \\ a_y - R_y \\ a_z - R_z \end{bmatrix}$$

Produce Final Image

- Keep the closest intersection point

Ray Tracing - Recap

For each pixel

Distance=MAX

Color=0

Ray=computeRay(pixel)

For each triangle

(CurrColor,CurrDistance)=computeIntersection(Ray)

If (CurrDistance<Distance)

Distance=CurrDistance

Color=CurrColor

Ray Tracing - Cost

For each pixel

Distance=MAX

Color=0

R=computeRay(pixel)

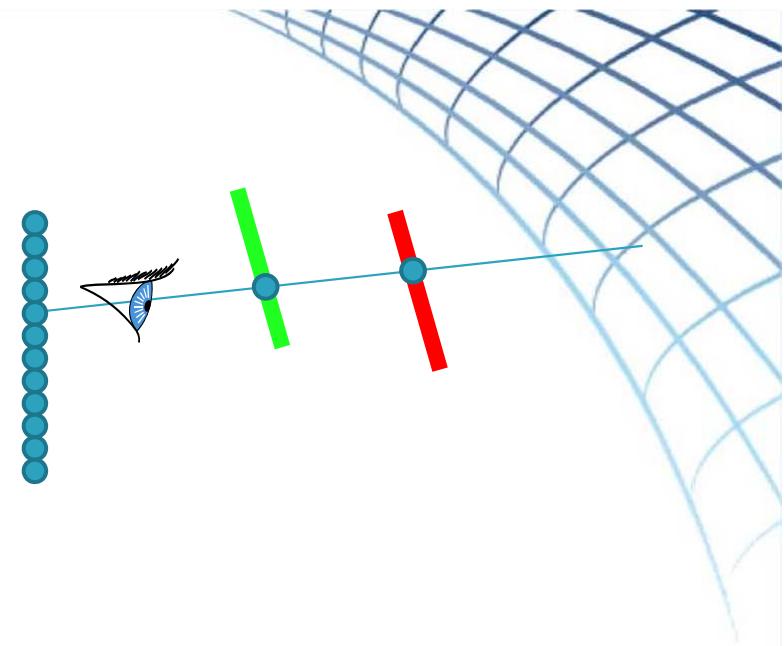

For each triangle

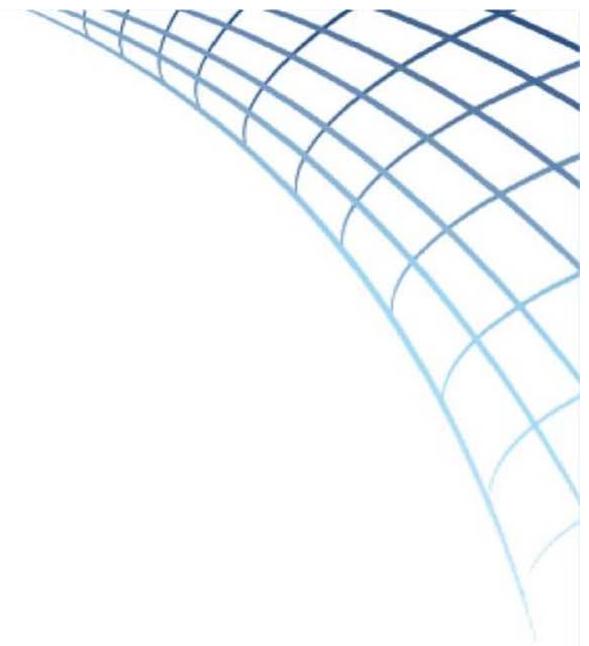

(CurrColor,CurrDistance)=testIntersection(R)

If (CurrDistance<Distance)

Distance=CurrDistance

Color=CurrColor

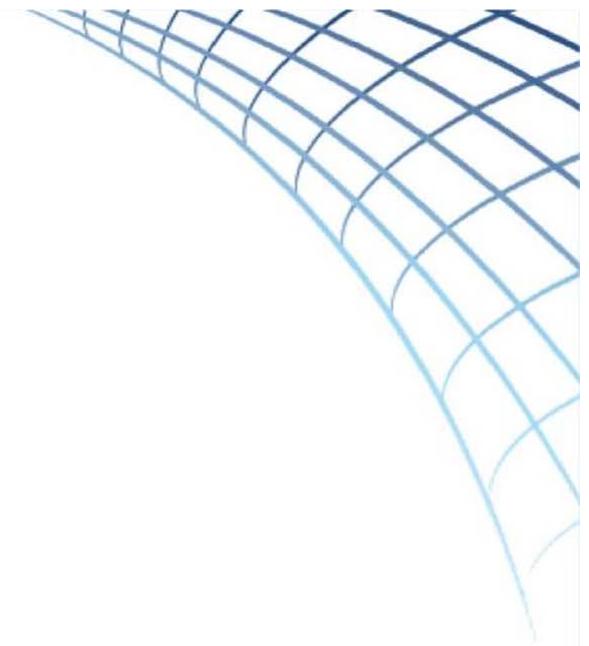

Performance Analysis

- **Stupid** implementation:
- Ray Tracing:

$$\text{Cost} = \text{Pixels} * \text{Triangles}$$

e.g., 100.000 triangles and a 1000^2 screen:

$$\text{Raytracing: } 100.000 * 1.000.000 = 10^{11}$$

Performance Analysis

- Smart implementation:
- Ray Tracing:

$$\text{Cost} = \text{Pixels} * \log(\text{Triangles})$$

 + building a structure

e.g., 100.000 triangles and a 1000^2 screen:

$$\text{Raytracing: } 1.000.000 * 5 + X = 5 * 10^6$$

Especially suitable for static data

What about real-time (30 Images/Sec)

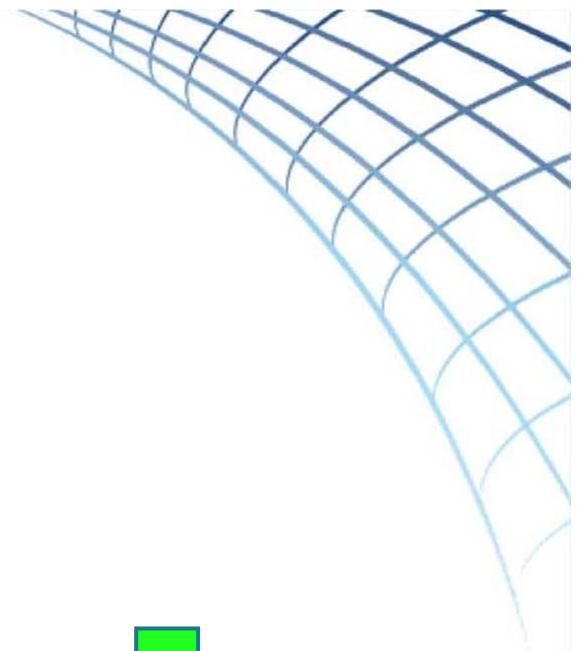

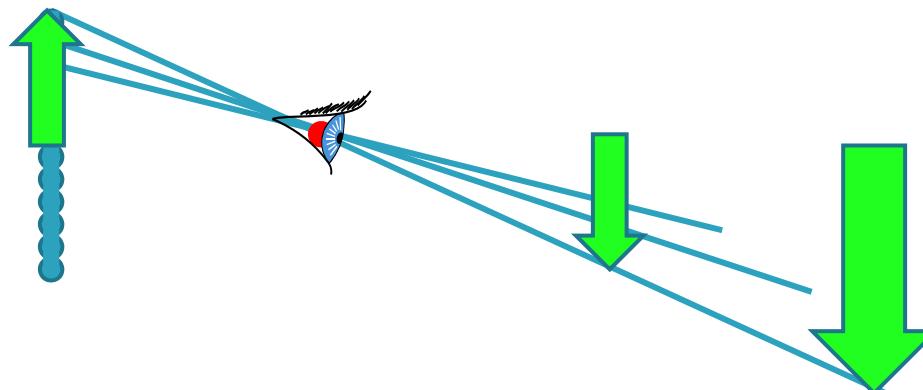

"building a structure" is generally slow

Alternative approach:

Rasterization via the Graphics Pipeline

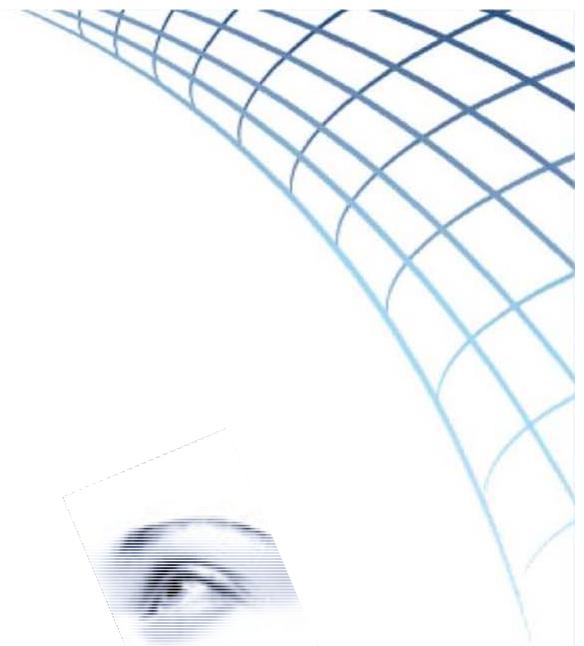

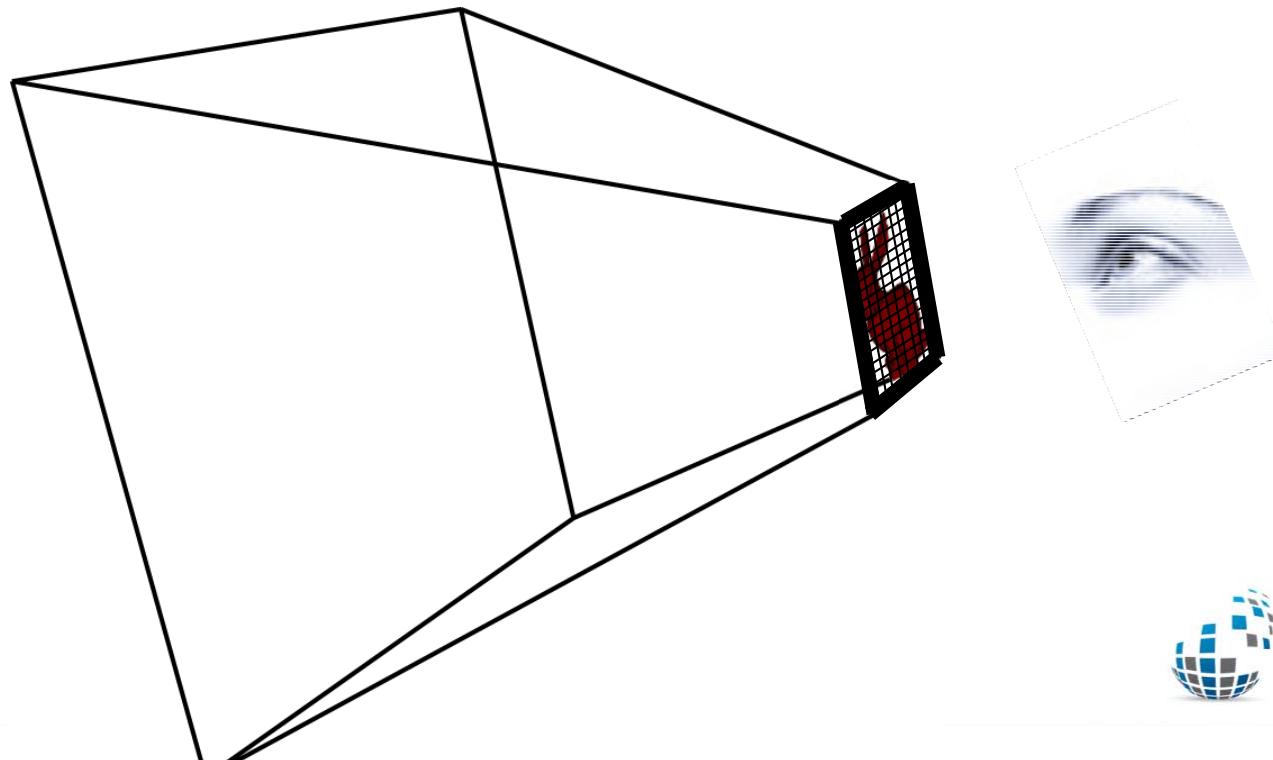

Virtual Camera

- Camera Plane in front of the eye

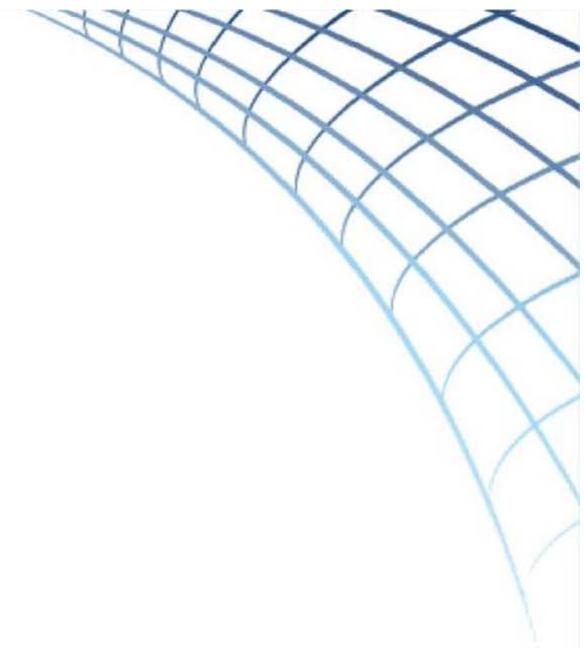

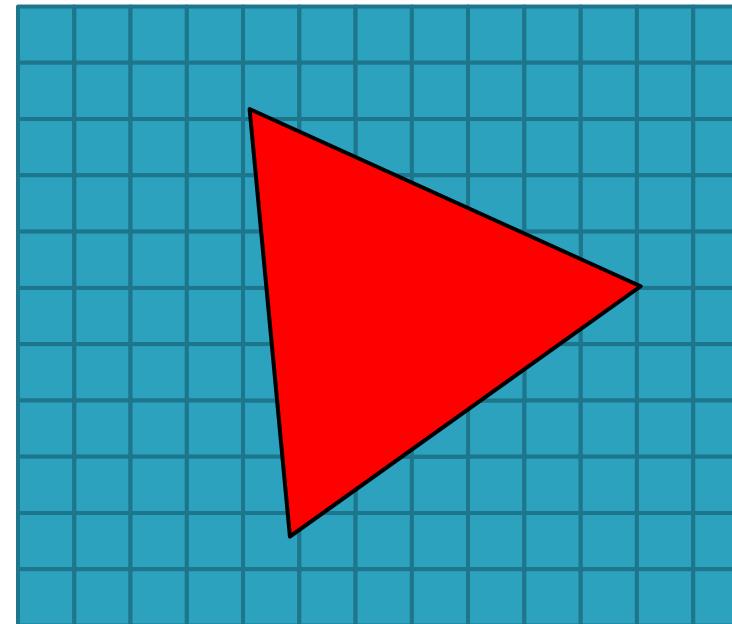

Simplified Graphics Pipeline

- **Projection:** Transform coordinates to screen

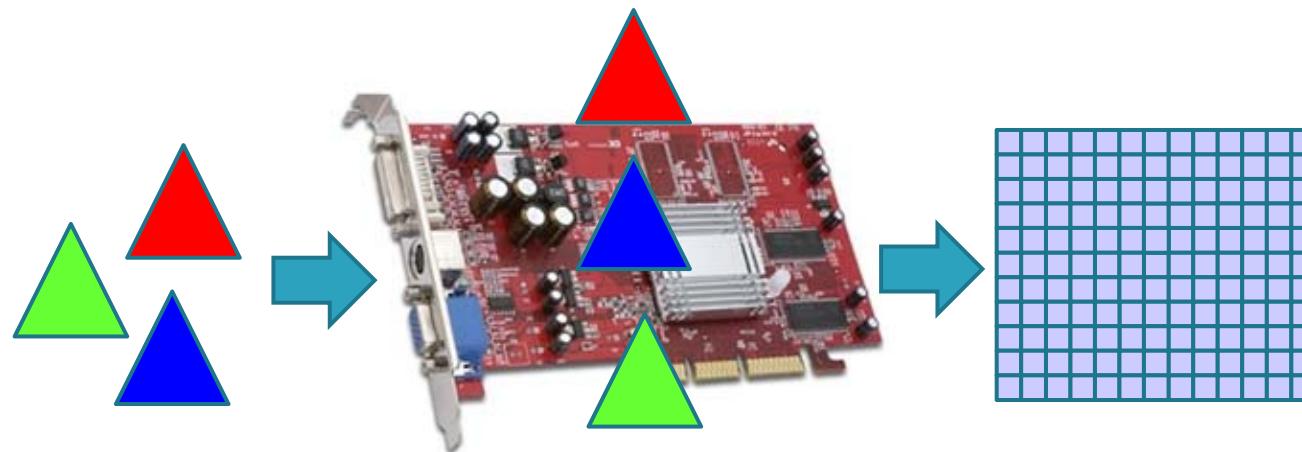

Simplified Graphics Pipeline

- Rasterization: Fill screen pixels

Simplified Graphics Pipeline

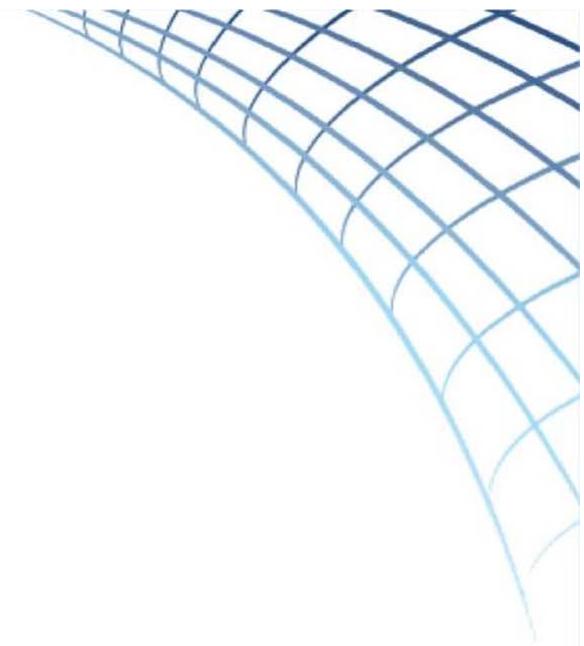

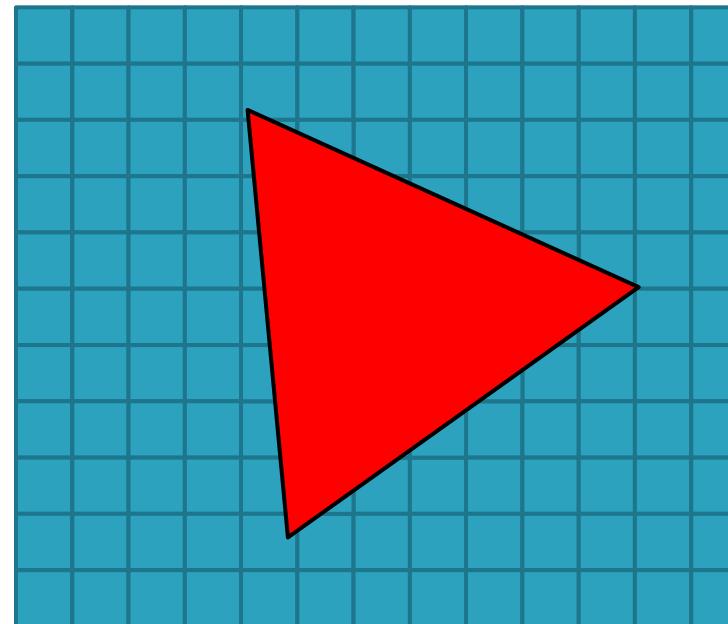

- Highly parallelizable → GPUs

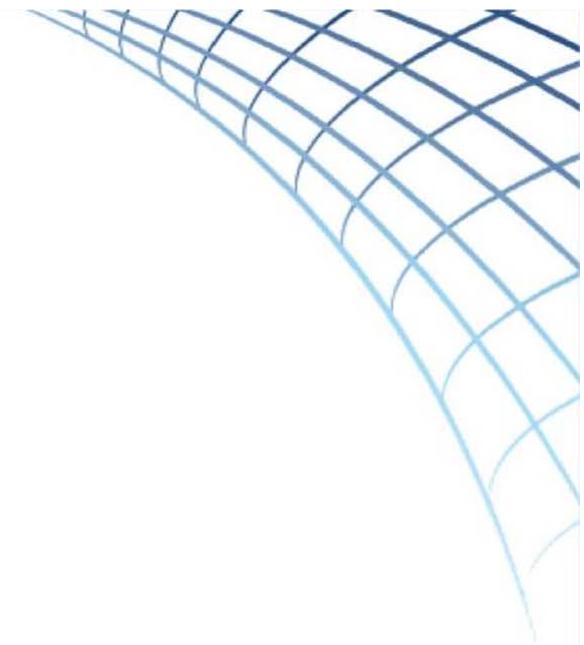

Thousands of processors working in parallel

Simplified Graphics Pipeline

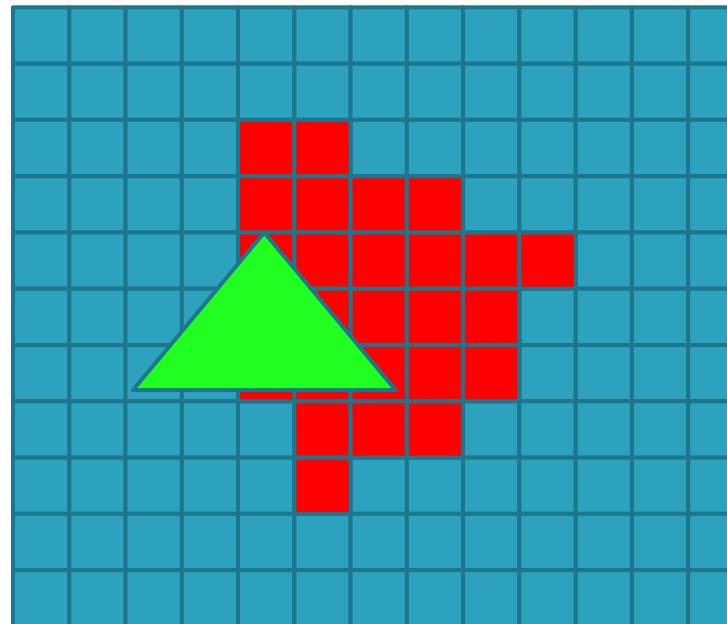

- **Catch:** Let's look at a second triangle...

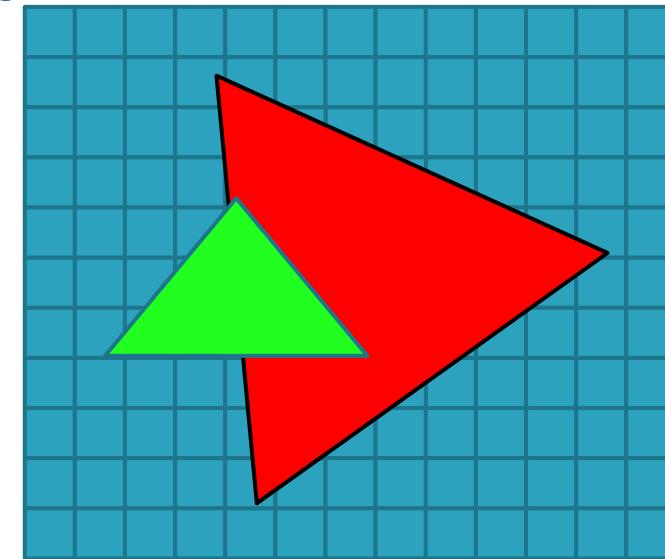

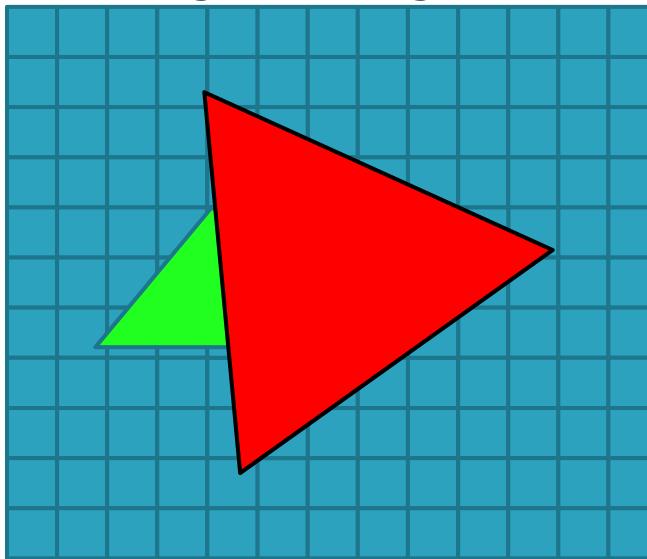

Simplified Graphics Pipeline

- **Catch:** Let's look at a second triangle...

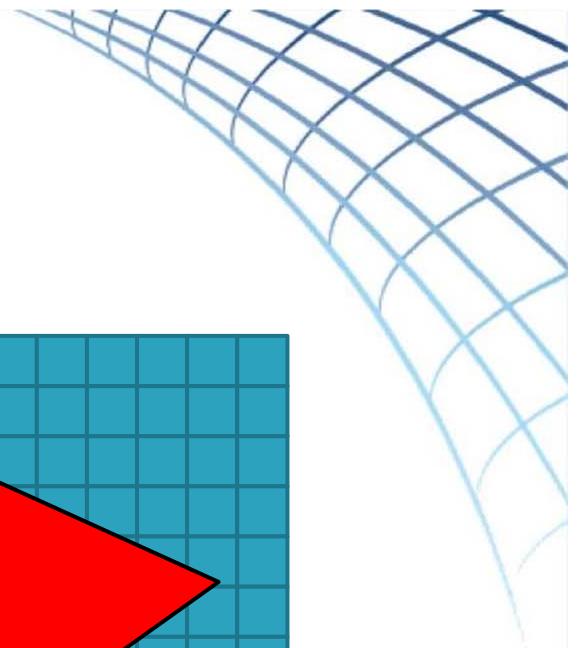

Simplified Graphics Pipeline

- **Catch:** Triangle drawing order changes result

As for ray tracing: need the closest triangle

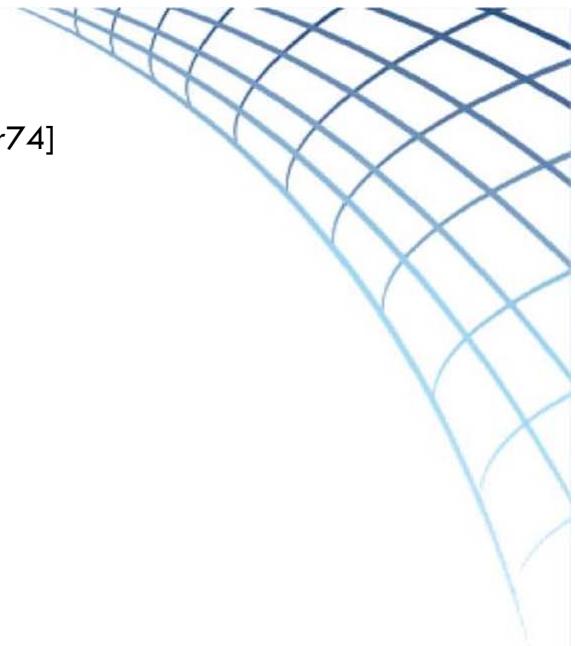

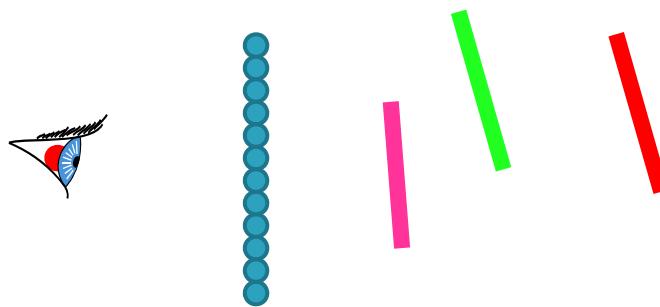

[Catmull74] , [Strasser74]

Simplified Graphics Pipeline

Depth Buffer: Avoid sorting triangles!

- Store a color and **depth** in each pixel

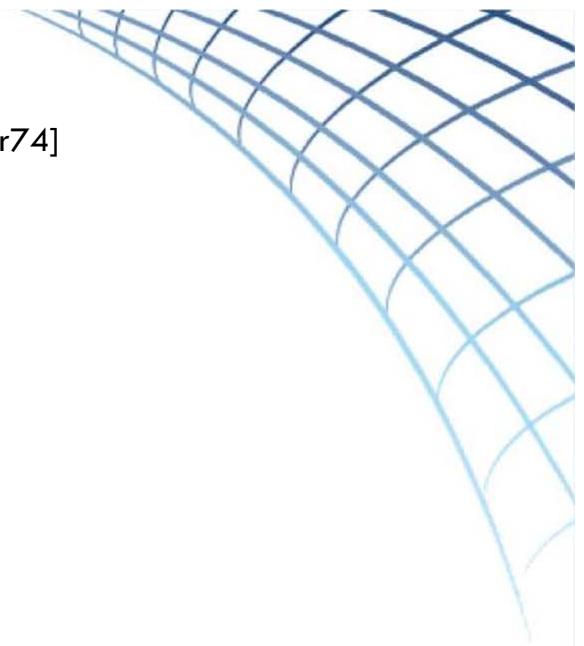

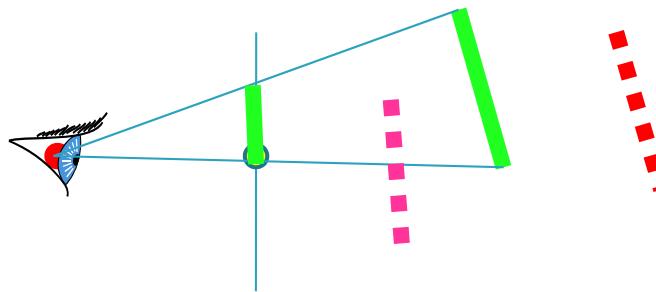

Koninklijk Instituut Van Ingenieurs

[Catmull74] , [Strasser74]

Simplified Graphics Pipeline

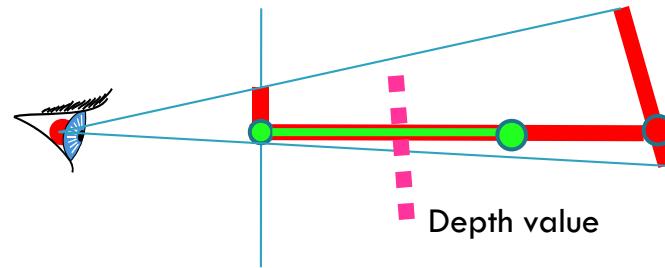

- Depth Buffer: Avoid sorting triangles!
- Store a color and depth in each pixel

[Catmull74] , [Strasser74]

Simplified Graphics Pipeline

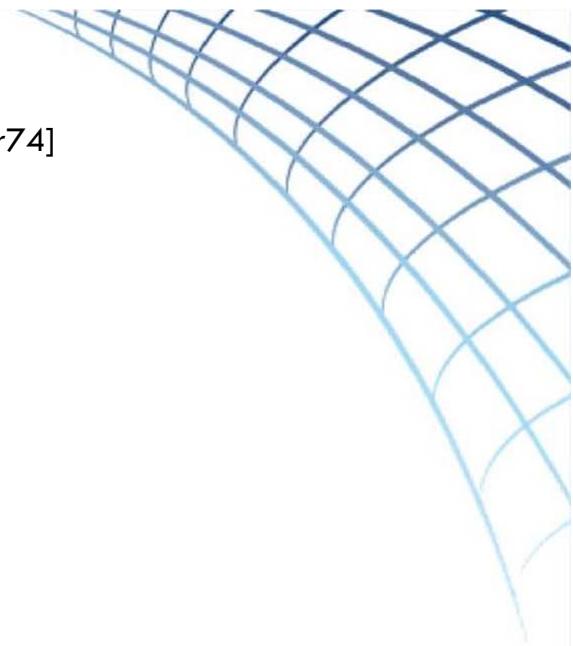

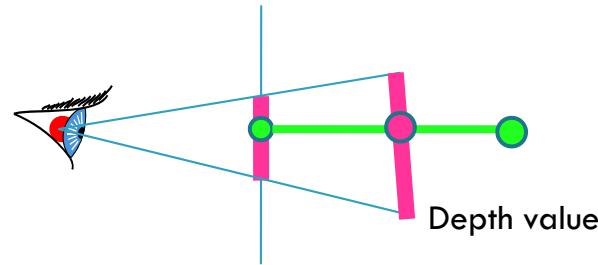

- Depth Buffer: Avoid sorting triangles!
- Store a color and depth in each pixel

[Catmull74] , [Strasser74]

Simplified Graphics Pipeline

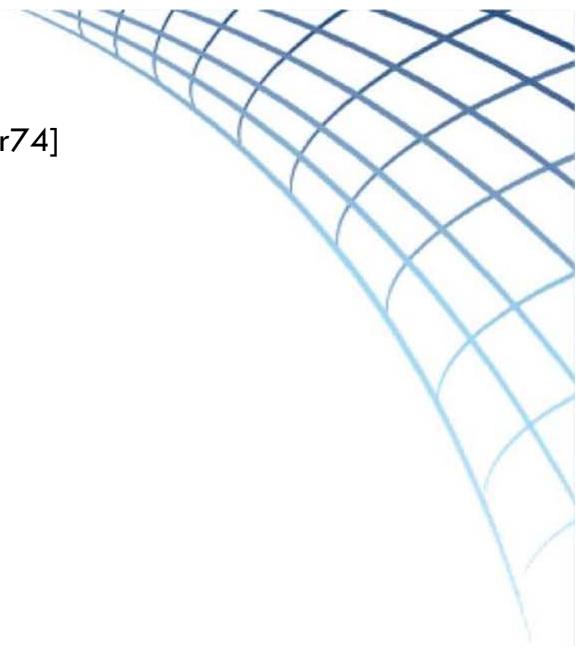

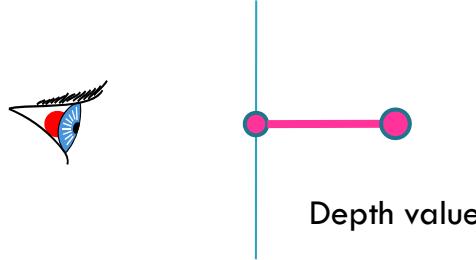

- Depth Buffer: Avoid sorting triangles!
- Store a color and depth in each pixel

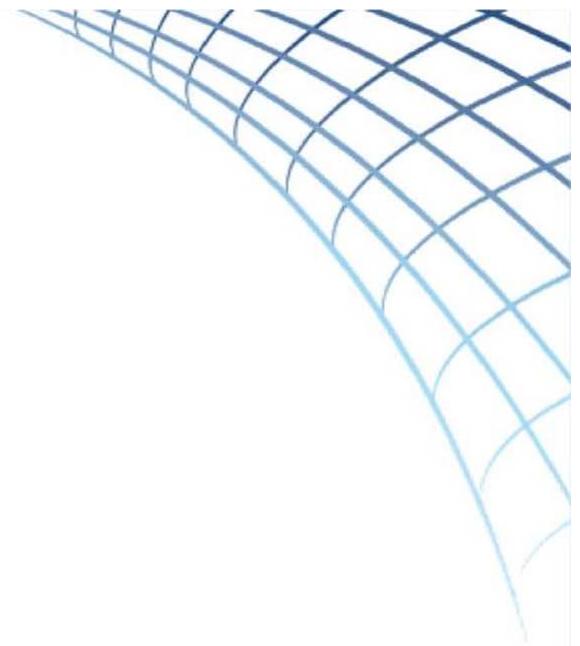

[Catmull74] , [Strasser74]

Simplified Graphics Pipeline

- Depth Buffer: Avoid sorting triangles!
- Store a color and depth in each pixel

Koninklijk Instituut Van Ingenieurs

Depth Buffering [1974]

But was applied much later... Why?

Memory requirements

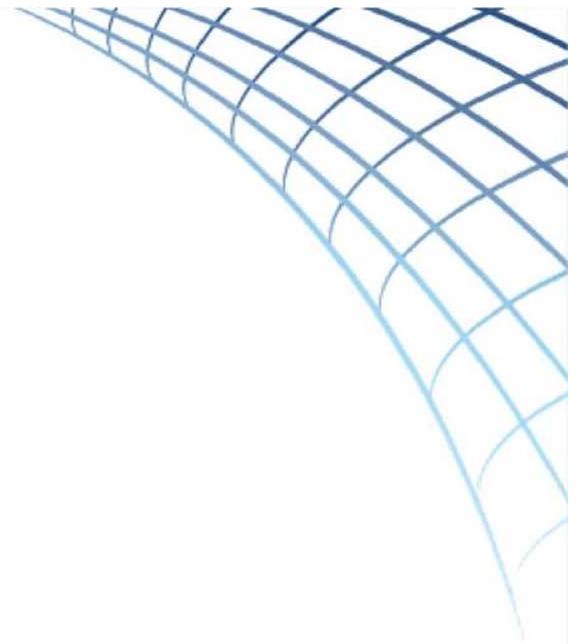

320x200 pixel -> 200 KB of memory !

2000x1000 pixel -> 6 MB of memory !

1974 : \$314,573 /MB

1986 : \$ 300 /MB

1993 : \$28 /MB (Nvidia)

Cost of Rasterization

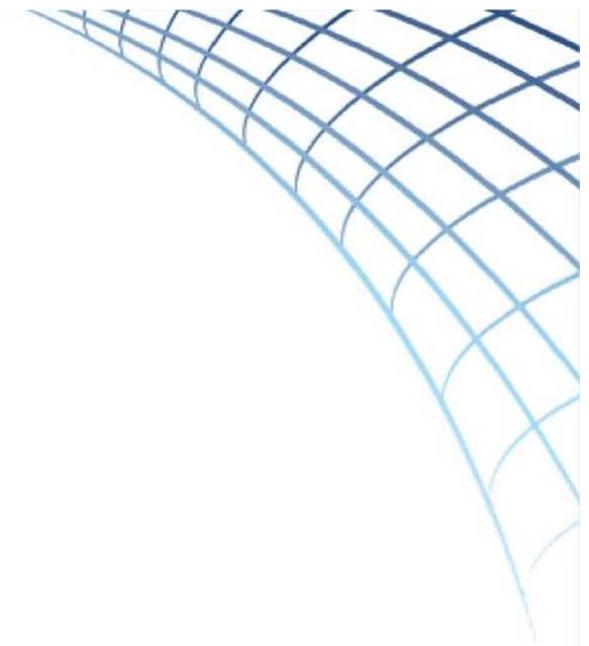

Algorithm:

For each triangle

```
projTri=projectTriangle(triangle)
```

```
fillPixels(projTri)
```

Cost = Triangles + “drawn pixels”

Performance Analysis

Ray Tracing:

$$\text{Cost} = \text{Pixels} * \log(\text{Triangles}) + \text{structure}$$

vs.

Rasterization:

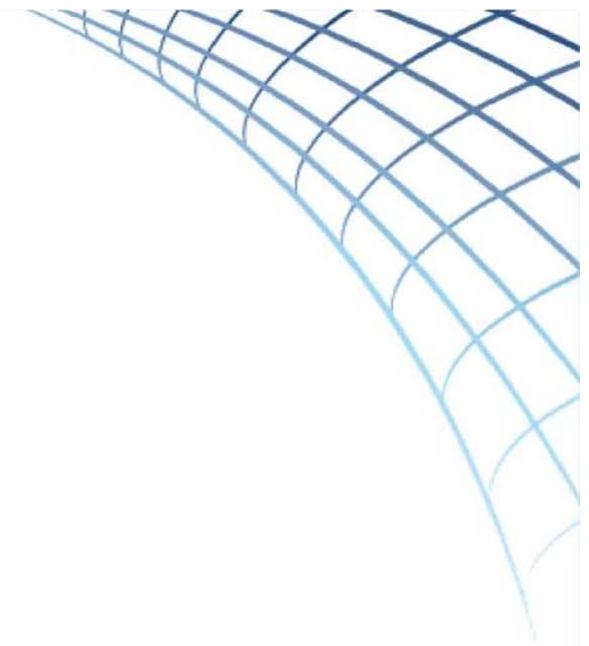

$$\text{Cost} = \text{Triangles} + \text{"drawn pixels"}$$

e.g., 100.000 triangles and a 1000^2 screen:

$$\text{Raytracing: } X+5 * 1.000.000$$

$$\text{Rasterization: } 100.000 + \text{"drawn pixels"}$$

$$\text{Raytracing/Rasterization time: } \sim 50$$

Performance Analysis

Ray Tracing:

$$\text{Cost} = \text{Pixels} * \log(\text{Triangles}) + \text{structure}$$

vs.

Rasterization:

$$\text{Cost} = \text{Triangles} + \text{"drawn pixels"}$$

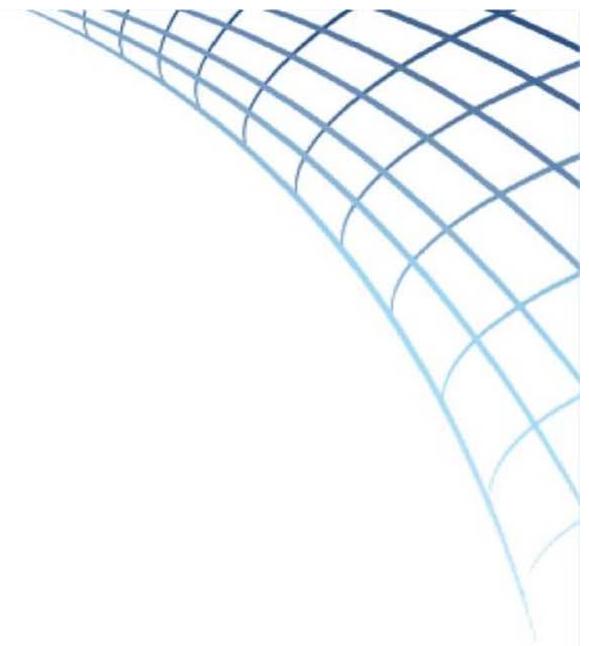

e.g., 100.000.000 triangles and a 1000^2 screen:

$$\text{Raytracing: } X+8 * 1.000.000$$

$$\text{Rasterization: } 100.000.000 + \text{"drawn pixels"}$$

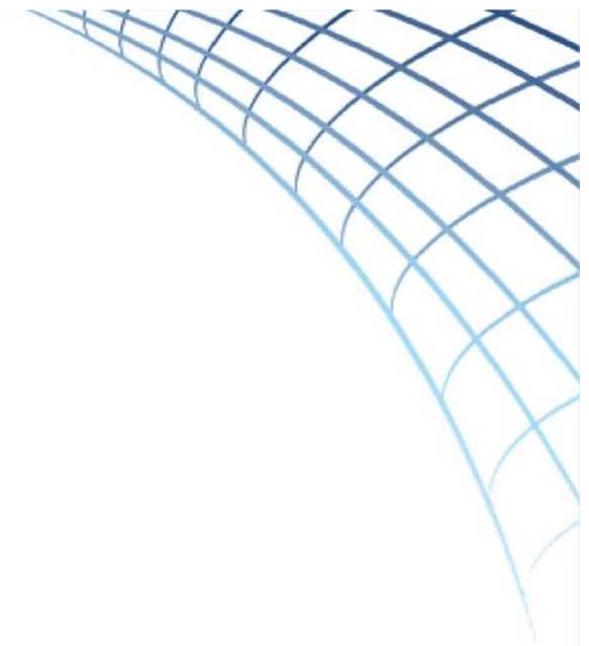

$$\text{Raytracing/Rasterization time: } \sim 0.1$$

... but Rasterization can be made smarter too...

What complexity do we work with?

- Today's Games:
 - 200.000 triangles
- Today's Movies
 - more than 1 Billion

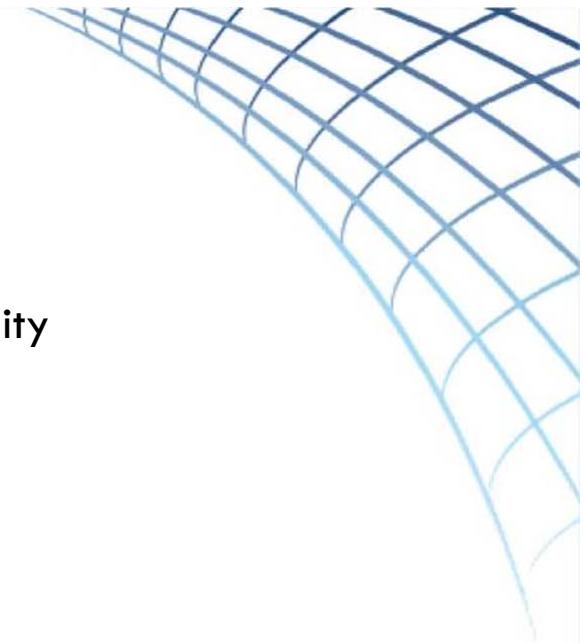

Movie Rendering Costs

>1000 hours!

Big Hero Six – copyright Disney

Koninklijk Instituut Van Ingenieurs

What complexity do we work with?

- Today's Games:
 - 200.000 triangles

Designed for optimality

Often real-world data

- Visualization Systems:
 - Millions of Data points
 - Potentially summarizing much more information

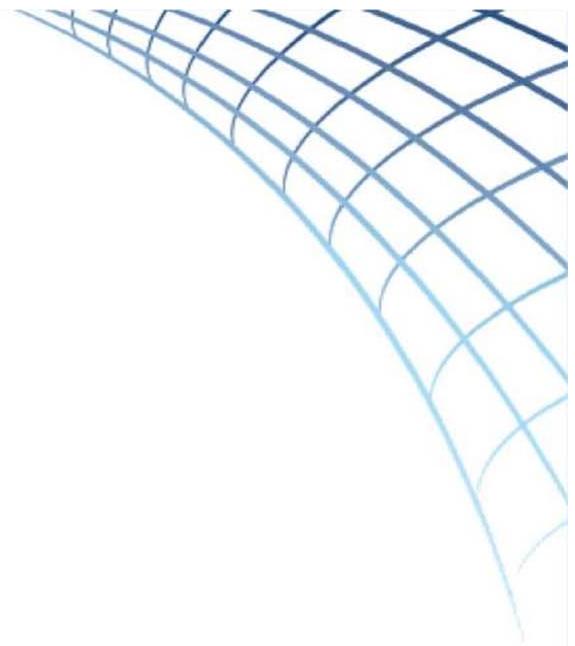

- Today's Movies
 - more than 1 Billion

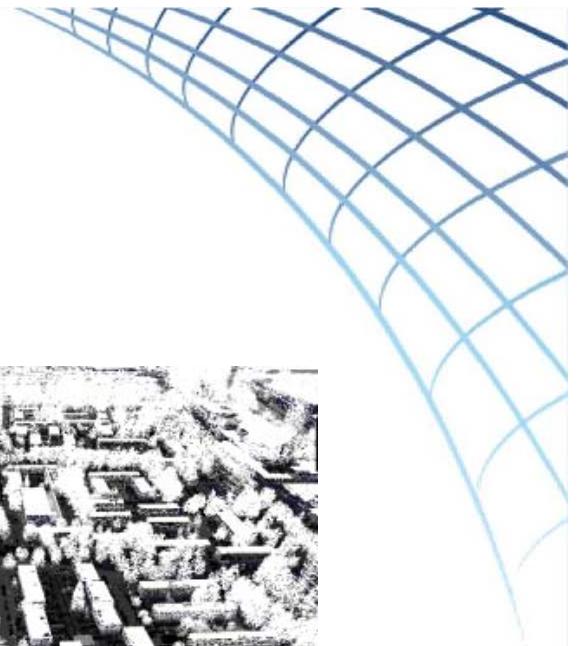

Designed for artistic look

For large-scale data display, we need to mix rendering strategies

Questions?

Marching Shapes – Non-collision distances

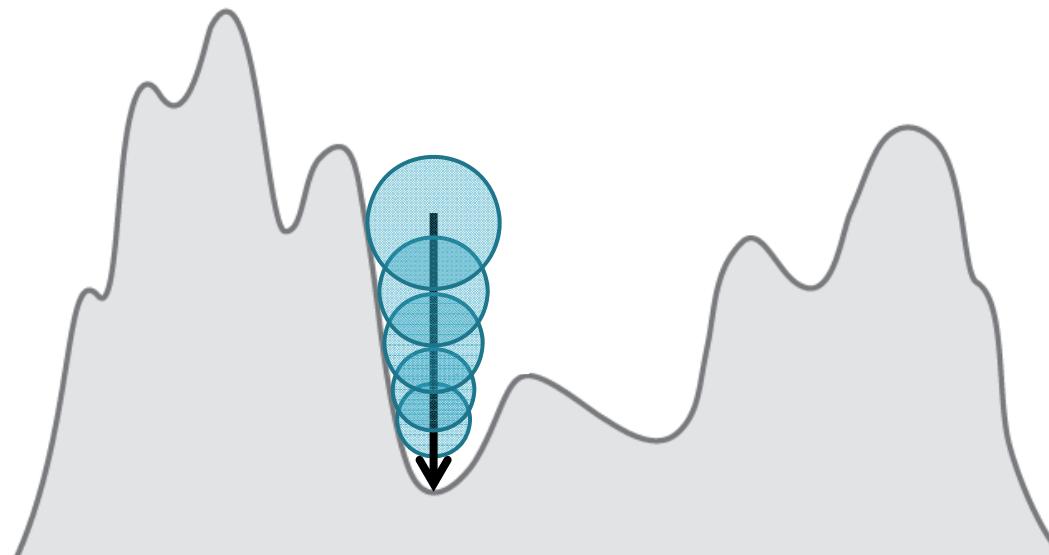

- Store distance to surface in 3D volume

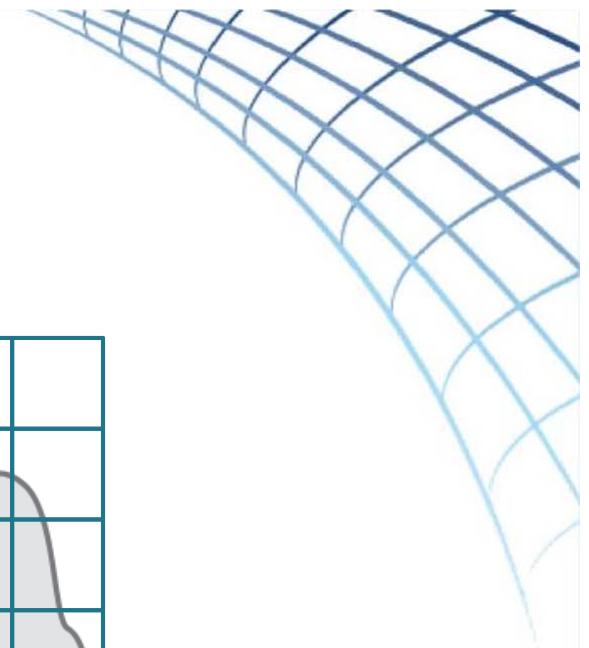

Marching Shapes – Non-collision distances

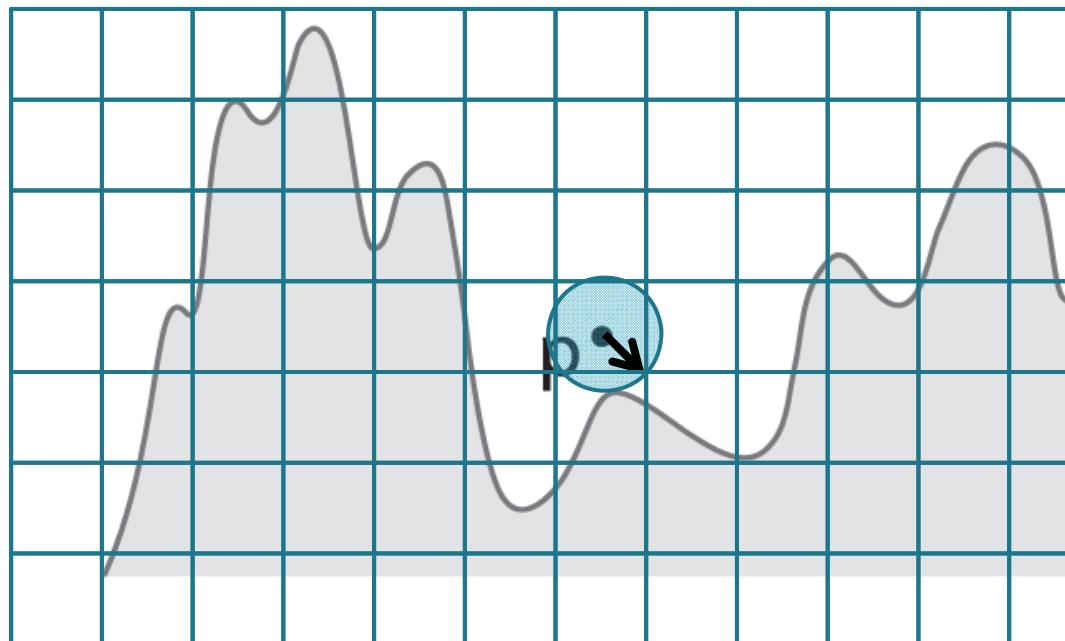

- Problems: Requires 3D storage
No converge on surface

Marching Shapes

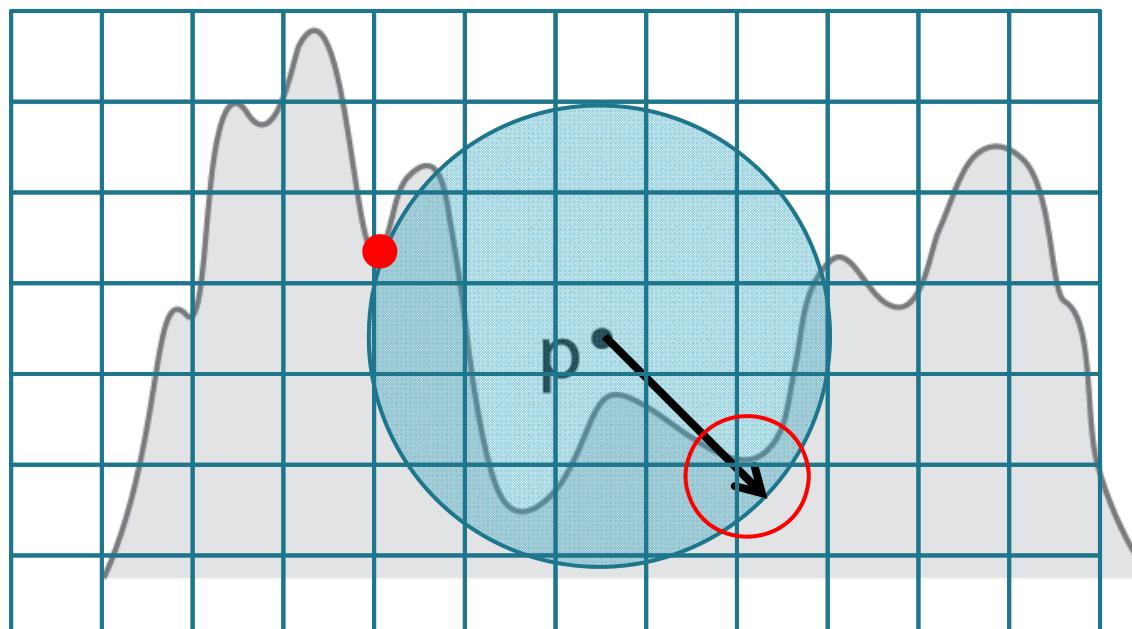

- Store distance to surface in 3D volume

[Baboud, Eisemann, Seidel – IEEE TVCG 2012]

Safety Shapes

- Store distance to 2nd surface in 3D volume

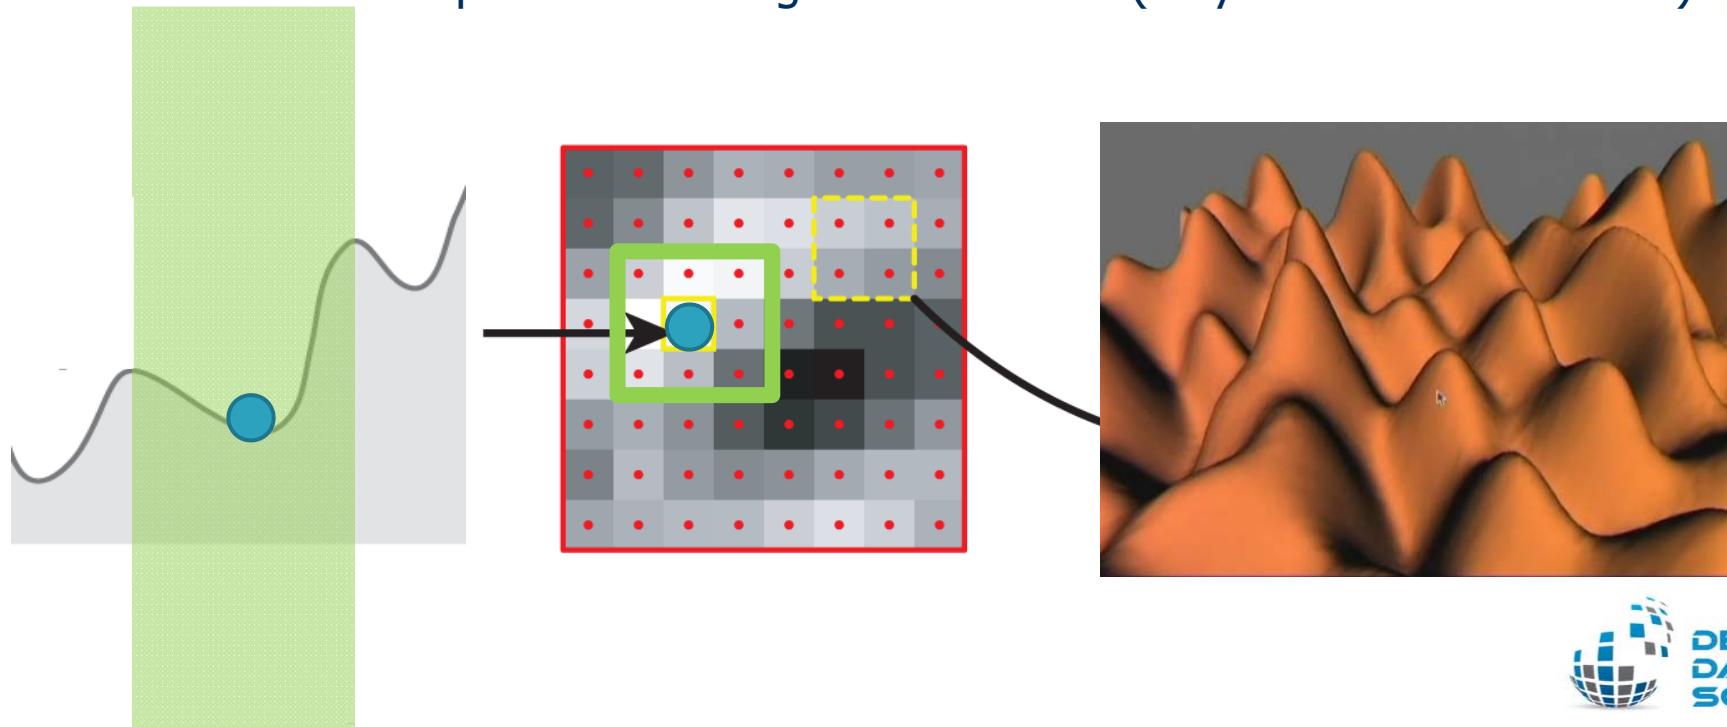

Start bisection method

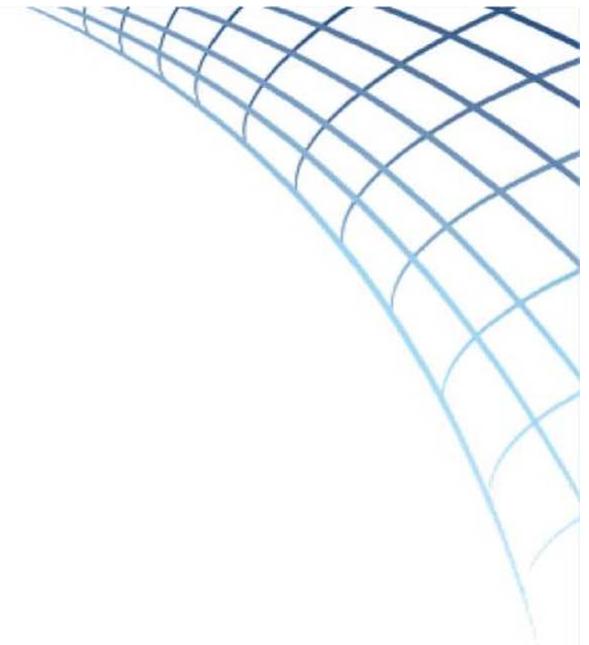

[Baboud, Eisemann, Seidel – IEEE TVCG 2012]

Reduce Memory Cost

- Store 2D square in the height-field texture (only one additional value)

[Baboud, Eisemann, Seidel – IEEE TVCG 2012]

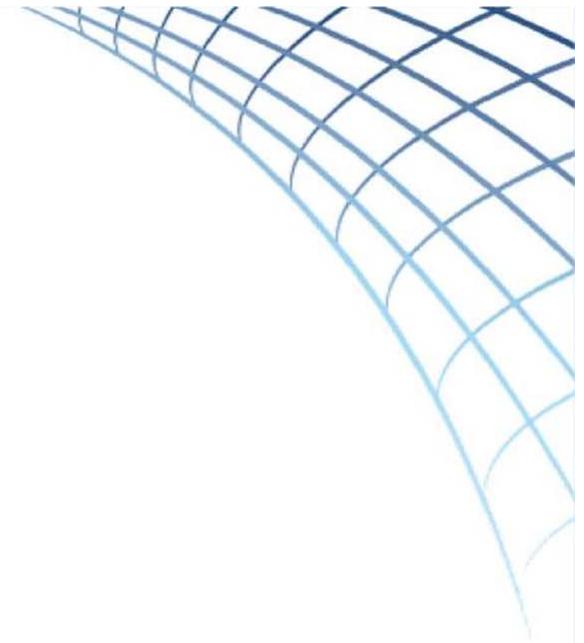

Safety Shapes – Bells and Whistles

- Fast Computation
- Novel Interpolation Method
- Improved Safety Shapes
(Directional, Cylicone etc.)
- Highest Numerical Stability

[Baboud, Eisemann, Seidel – IEEE TVCG 2012]

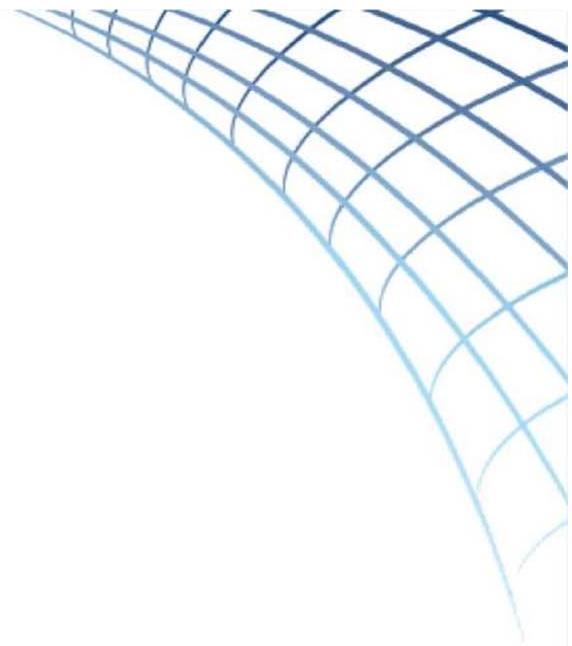

Precomputed Safety Shapes

- Fast and accurate height-field rendering
- Arbitrary rays
- Low precomputation (3-4 orders of magnitude)
- Pure 2.5D
- All data has to reside in memory

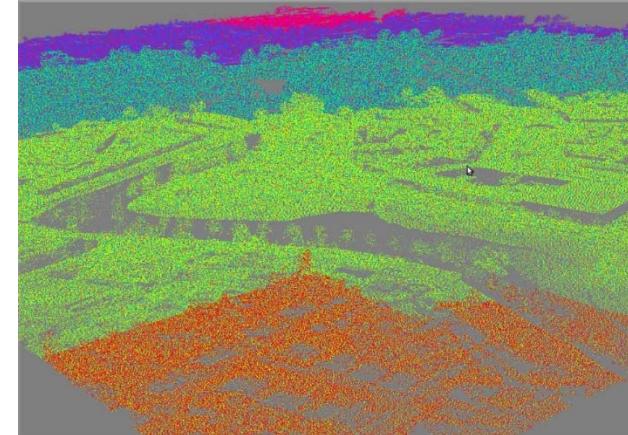

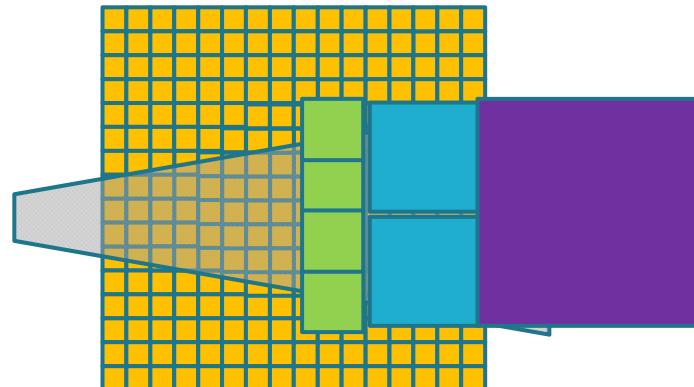

Koninklijk Instituut Van Ingenieurs

Questions?

Large-scale Out-of-core Rendering

- Create Hierarchy (tile area and create multiple resolution height fields)
- Choose resolution according to viewer
- Cull nodes outside the frustum

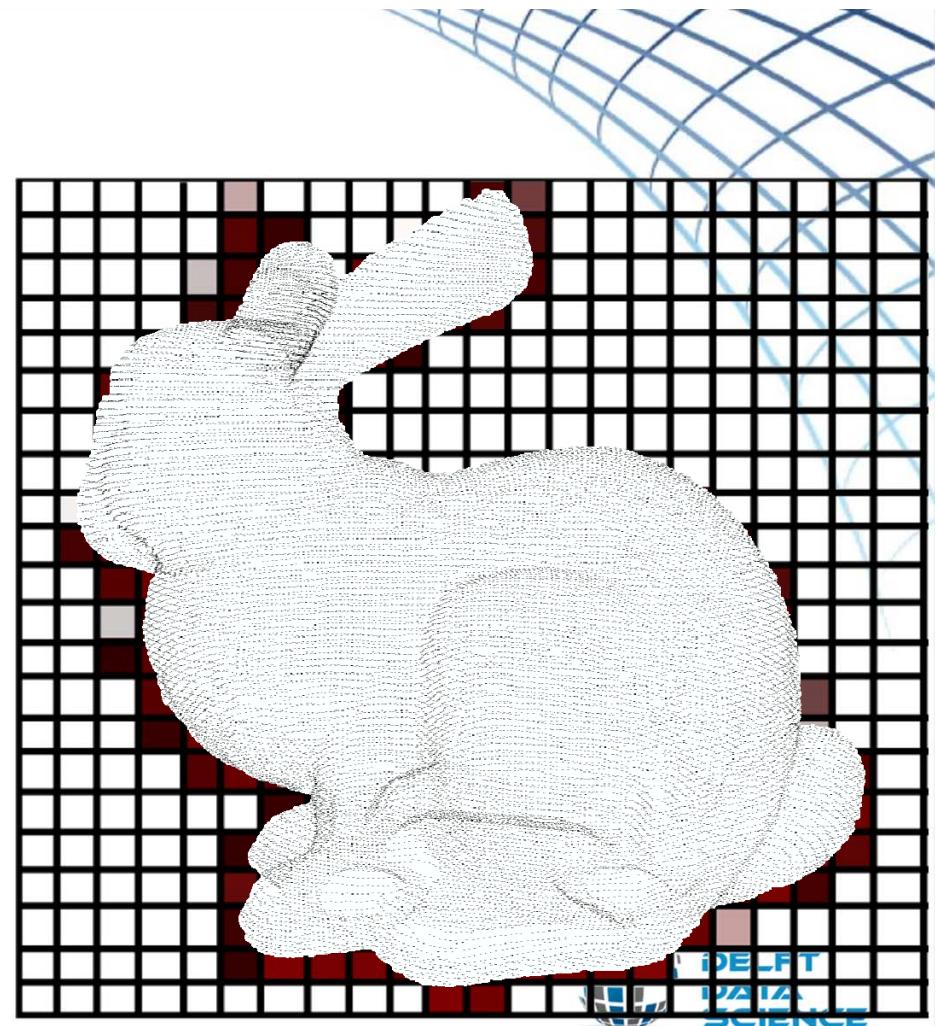

Large-Scale Data

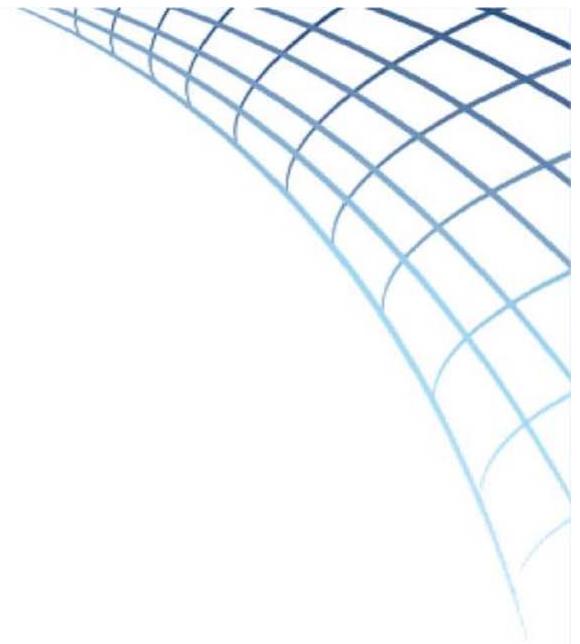

- Integration of street-view scans into the AHN2 dataset

Add structure...

- Voxel Representations

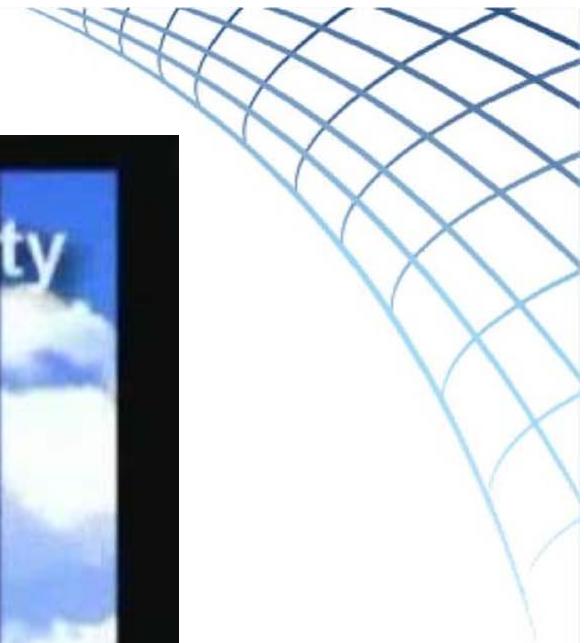

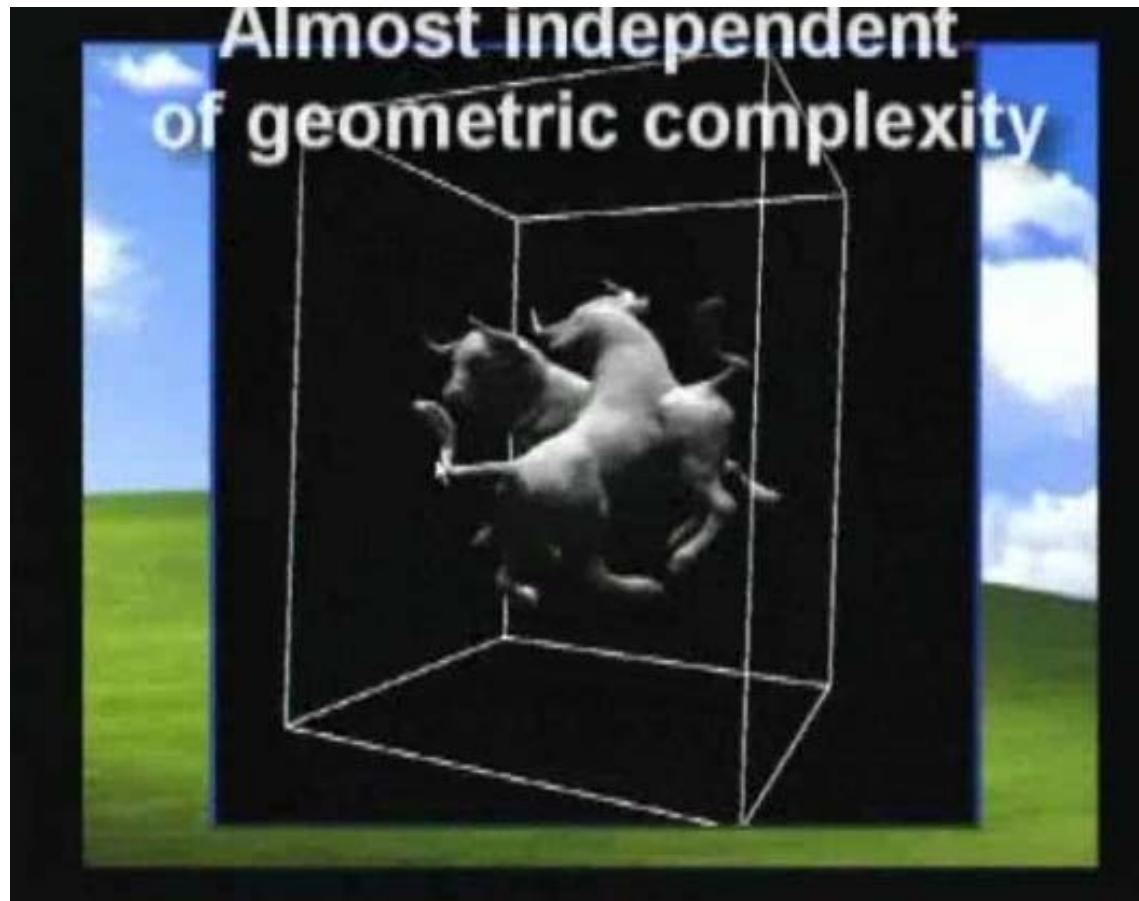

Voxels - Excursion

- Have many applications
- Allow for random-access queries
- Fast algorithms to voxelize objects in real-time
[Eisemann & Decoret i3D2006], [Eisemann & Decoret GI2008]
Back then: 1024^3 binary voxelization at 100 fps for 300K triangles (NvidiaG80)

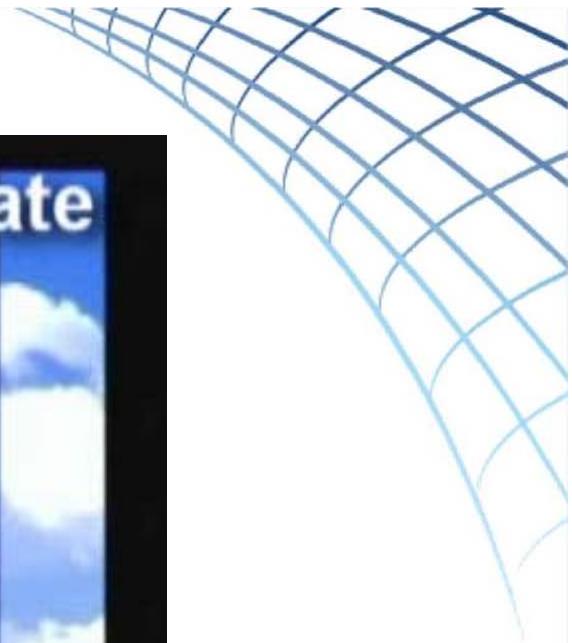

[Eisemann & Decoret i3D2006], [Eisemann & Decoret GI2008]

Voxels

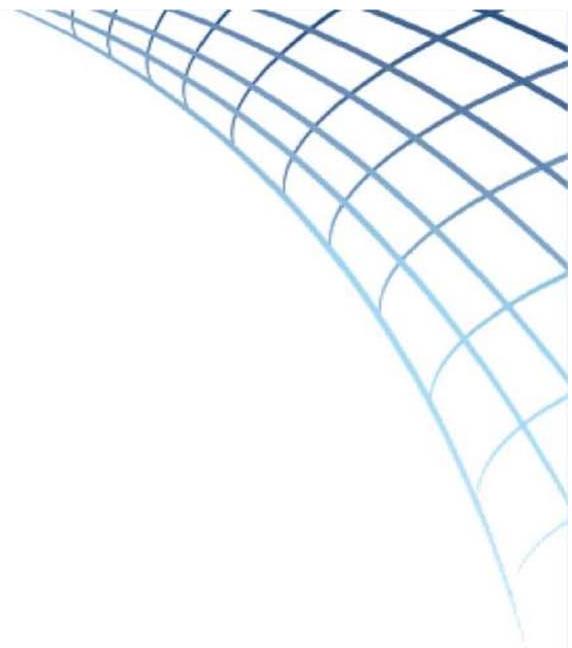

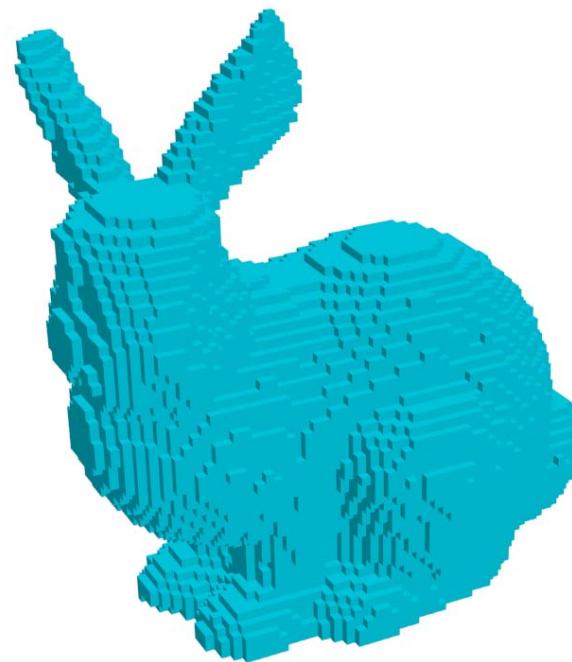

[Eisemann & Decoret i3D2006], [Eisemann & Decoret GI2008]

Voxels

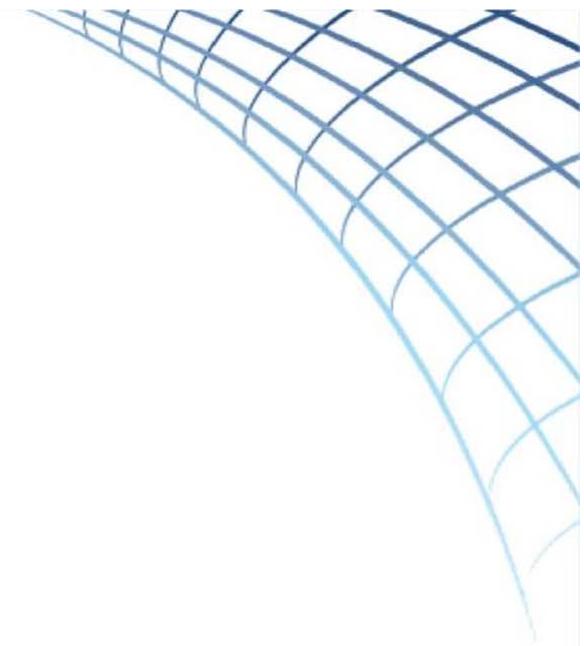

Voxels

Koninklijk Instituut Van Ingenieurs

Voxel Representations

- **Main problem:**
 - Memory is a key issue!
 - E.g. $2048^3 \times \text{RGBA} = \text{32 GB}$

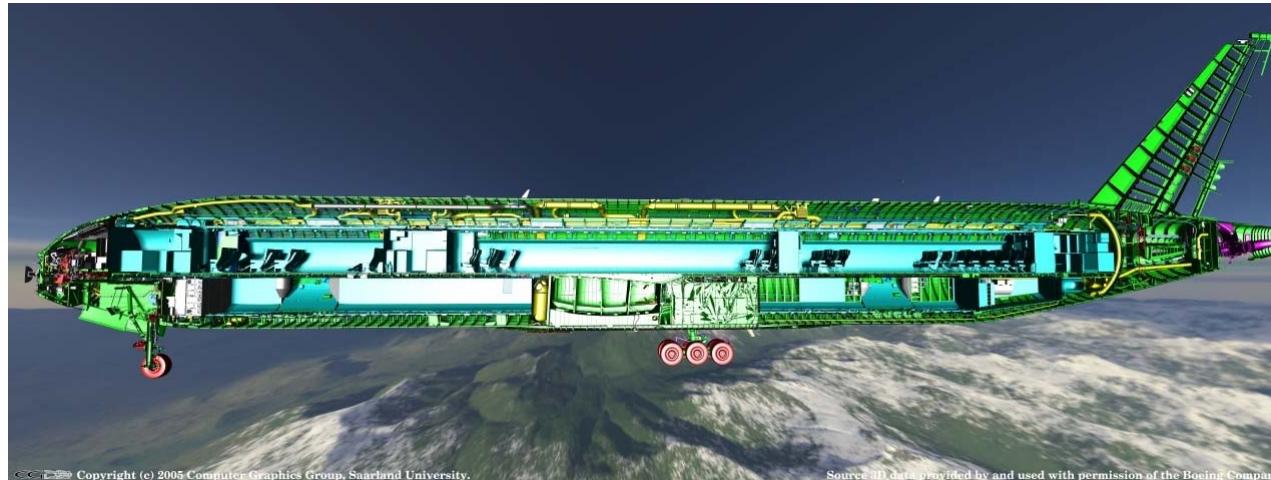

How to deal with large-scale scenes?

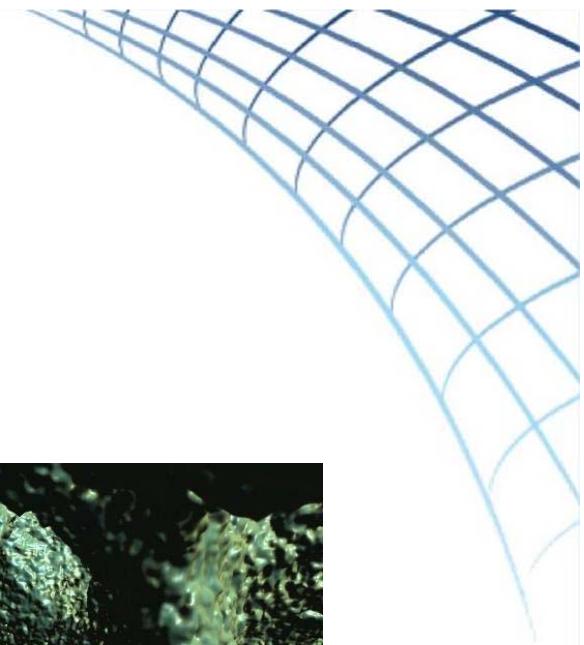

Level of detail, visibility tests, compression...

Today: only a glimpse of what is done...

Ray-tracing methods [Wald et al. 2004]

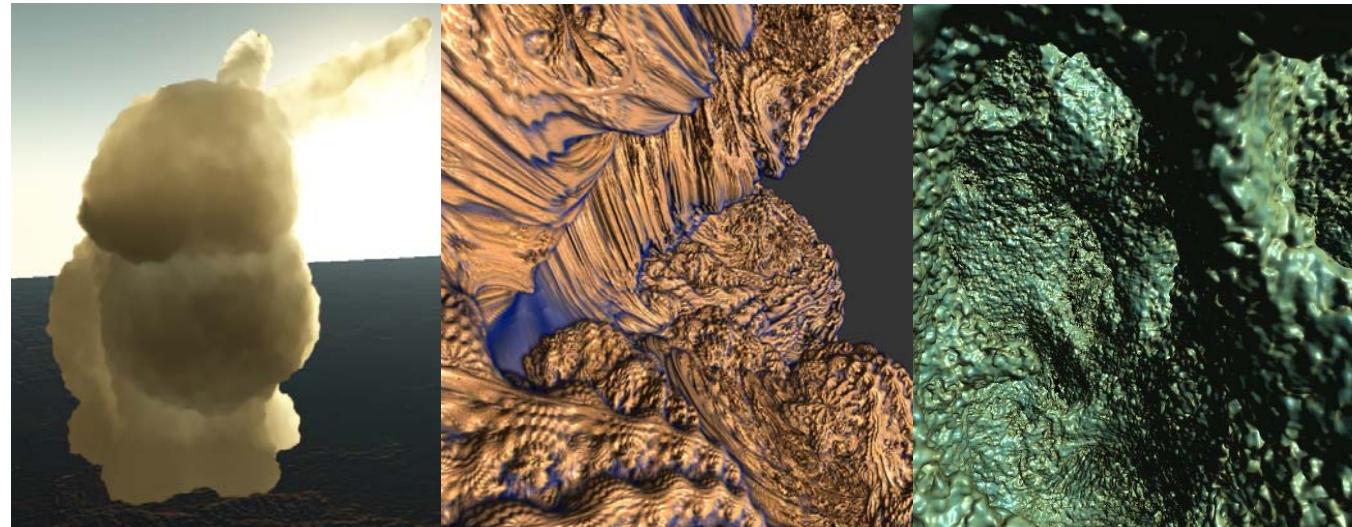

- During ray traversal record missing data and upload

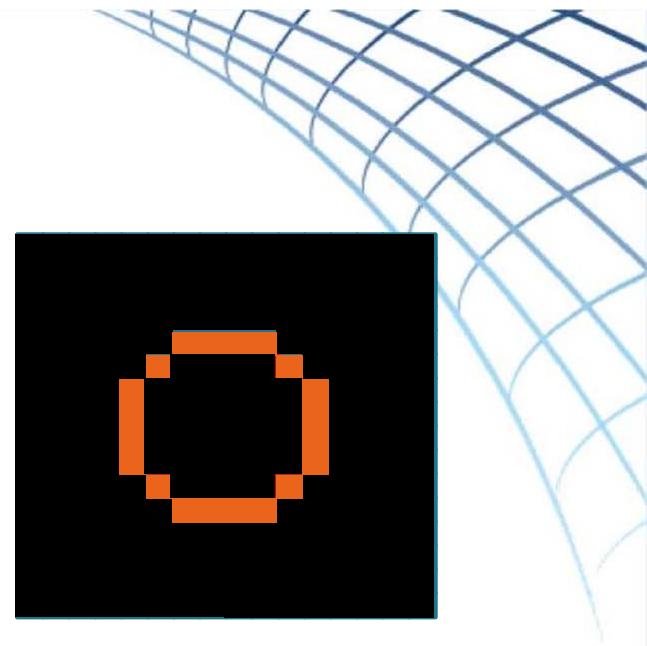

Modern GPU instances

- Hybrid CPU/GPU approach [Gobetti et al. 2008]
- Full GPU approach [Crassin et al. 2009]

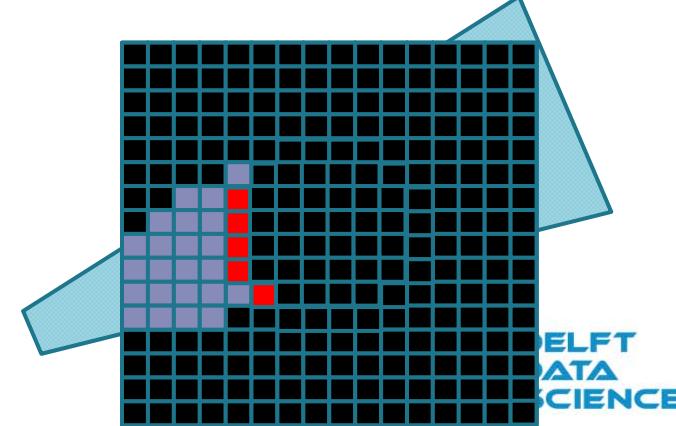

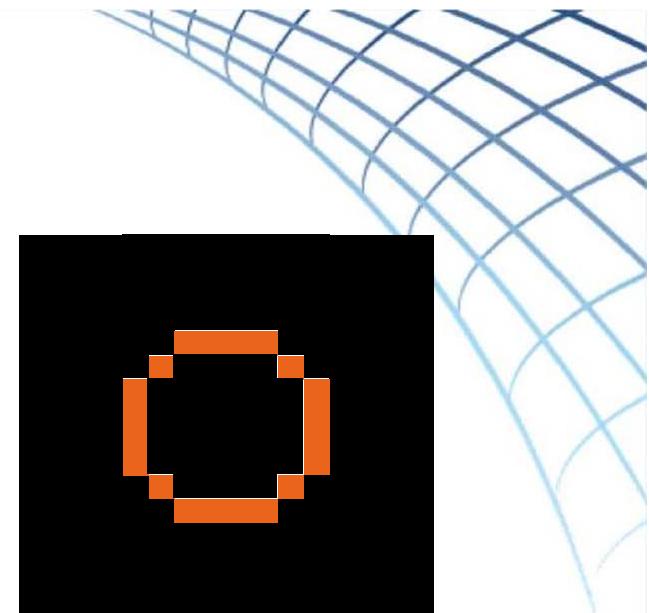

Ways to deal with large data

- Constant valued areas
(also empty)

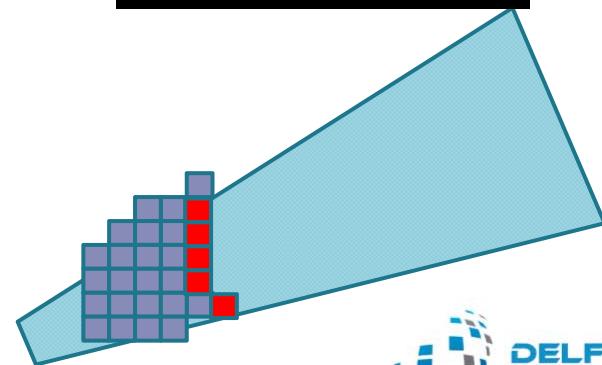

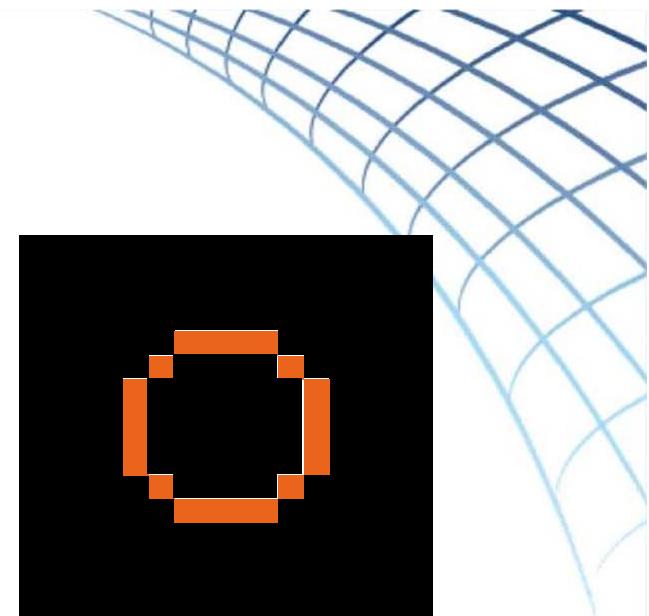

Ways to deal with large data

Ways to deal with large data

- How to exploit these observations in practice?

Need:

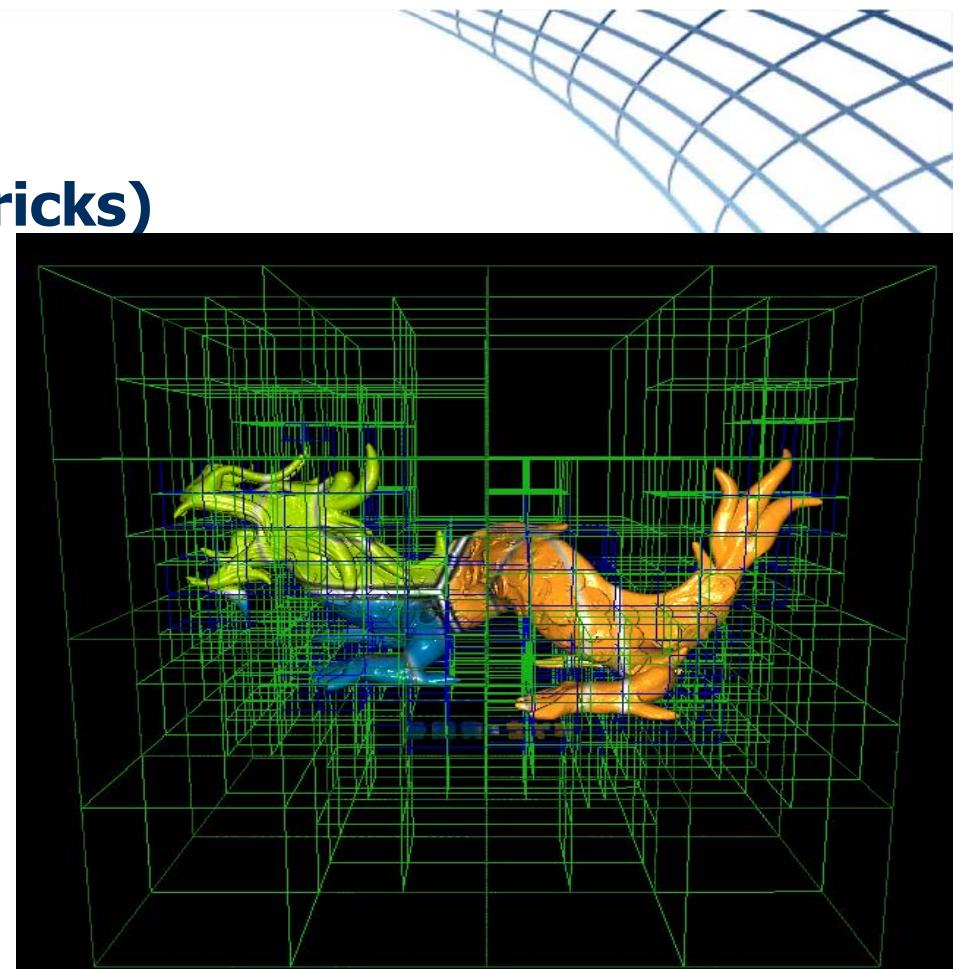

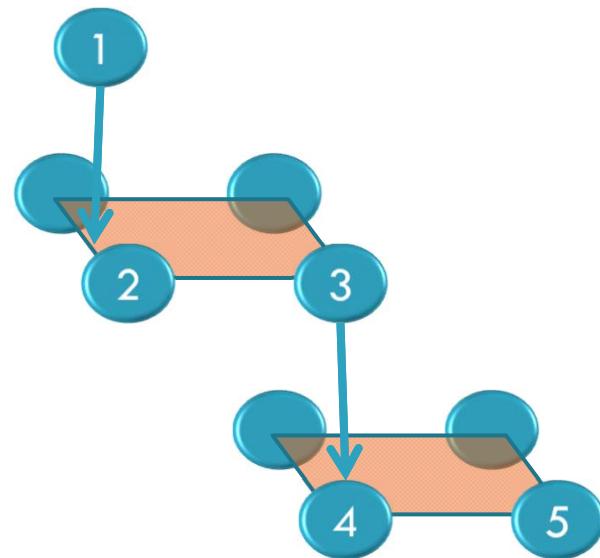

- Data structure allowing for easy adaptation
- Memory management

[Crassin, Lefebvre, Neyret, Eisemann - i3D 2009]
[Crassin, Neyret, Lefebvre, Eisemann - GPUPro2010]

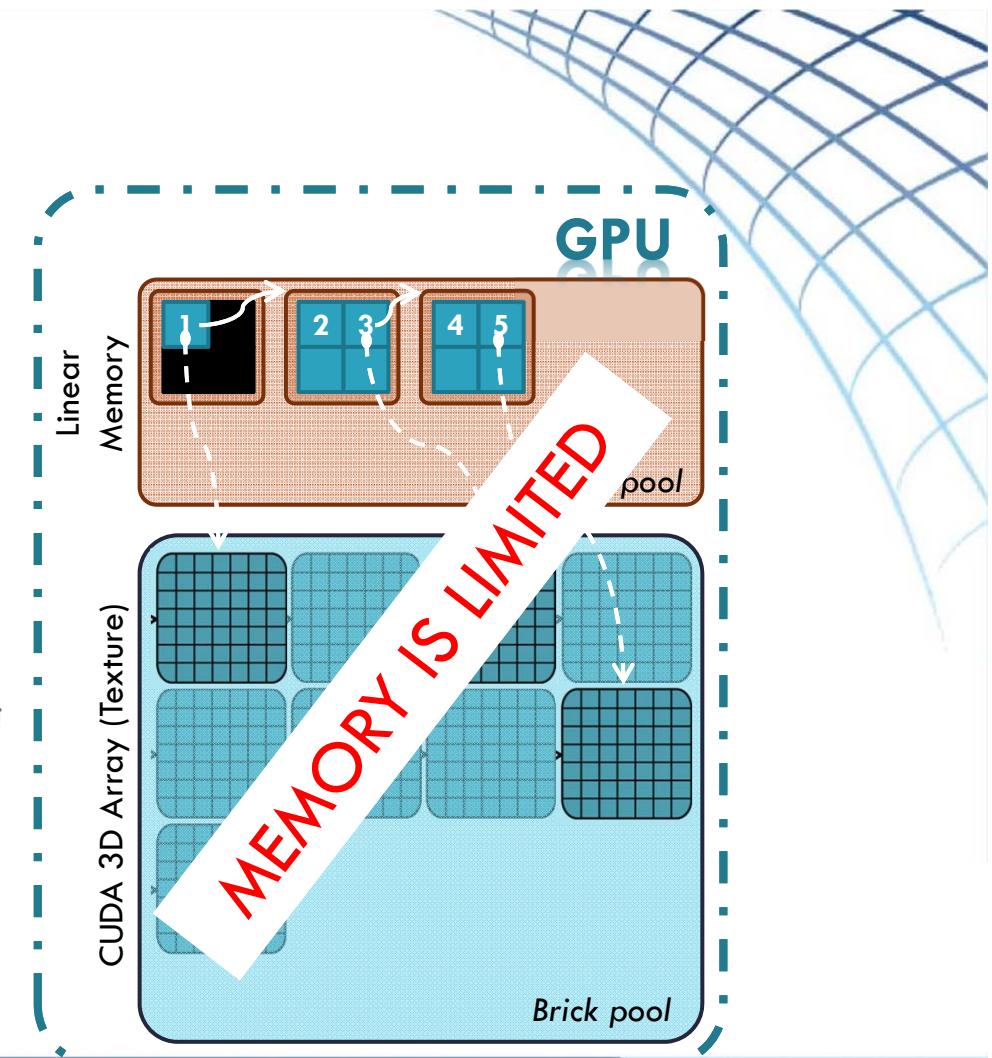

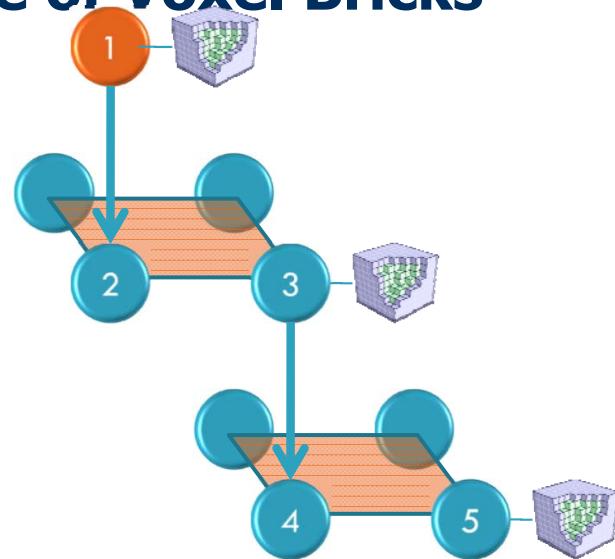

GigaVoxel System

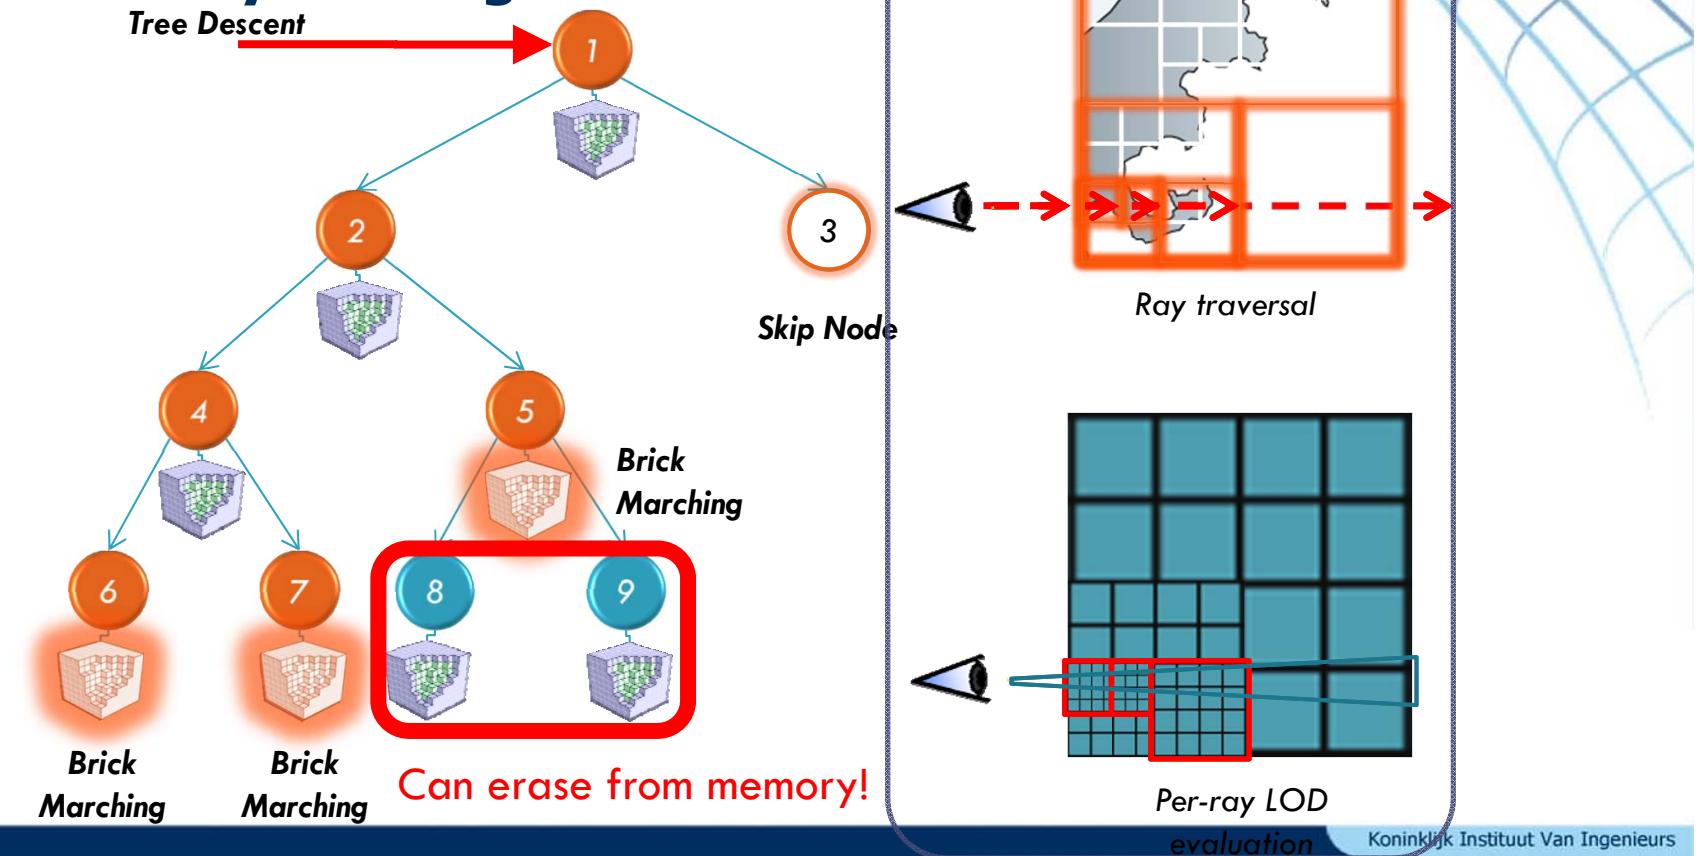

Octree of Small Volumes (Bricks)

Octree of Voxel Bricks

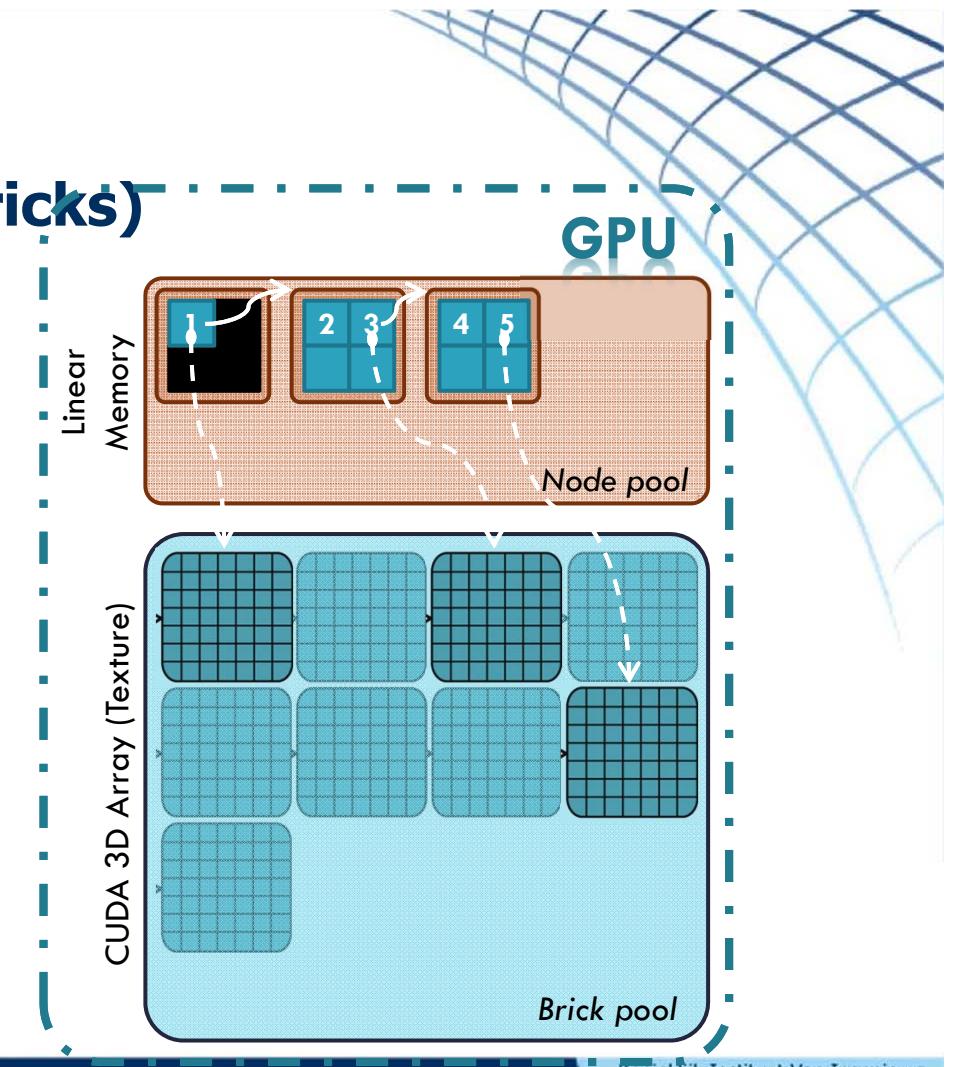

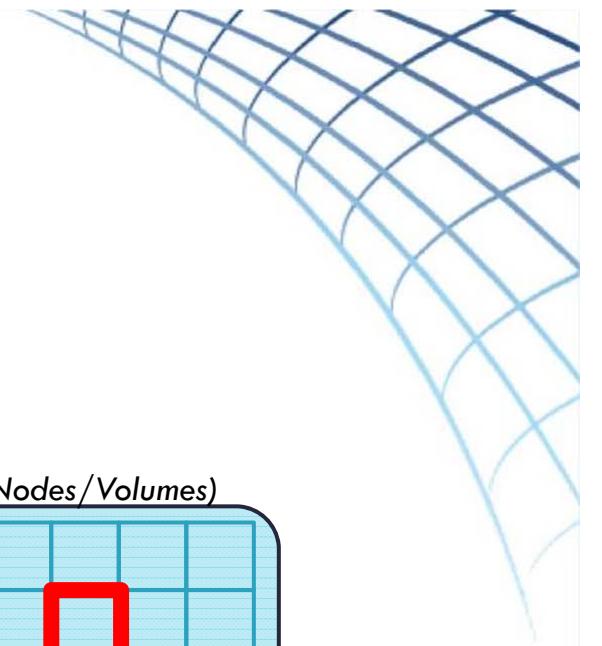

Volume Ray-Casting

Octree of Small Volumes (Bricks)

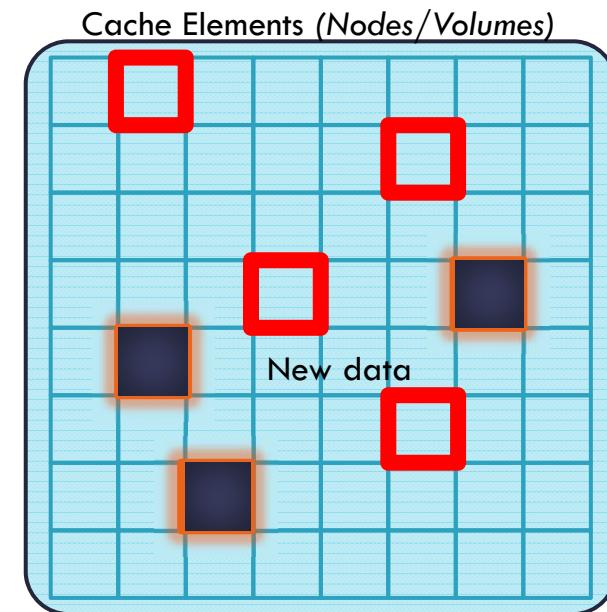

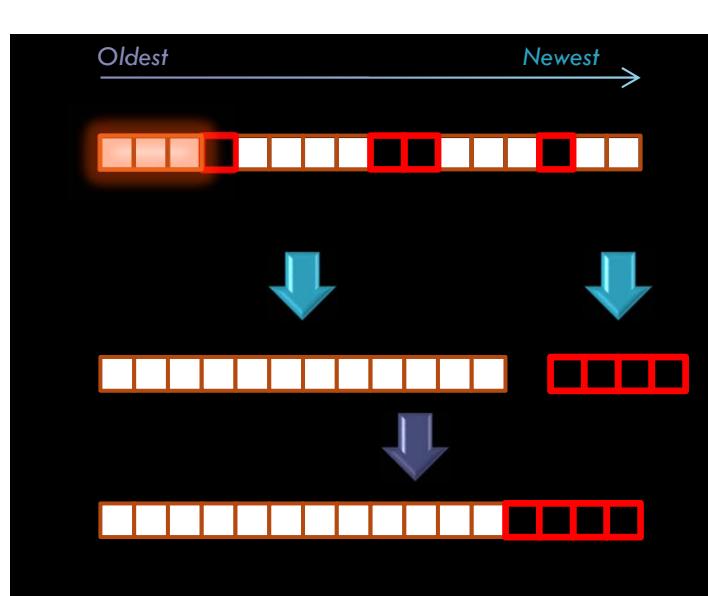

- All elements have the **same size** in memory!
- Makes exchanges easy

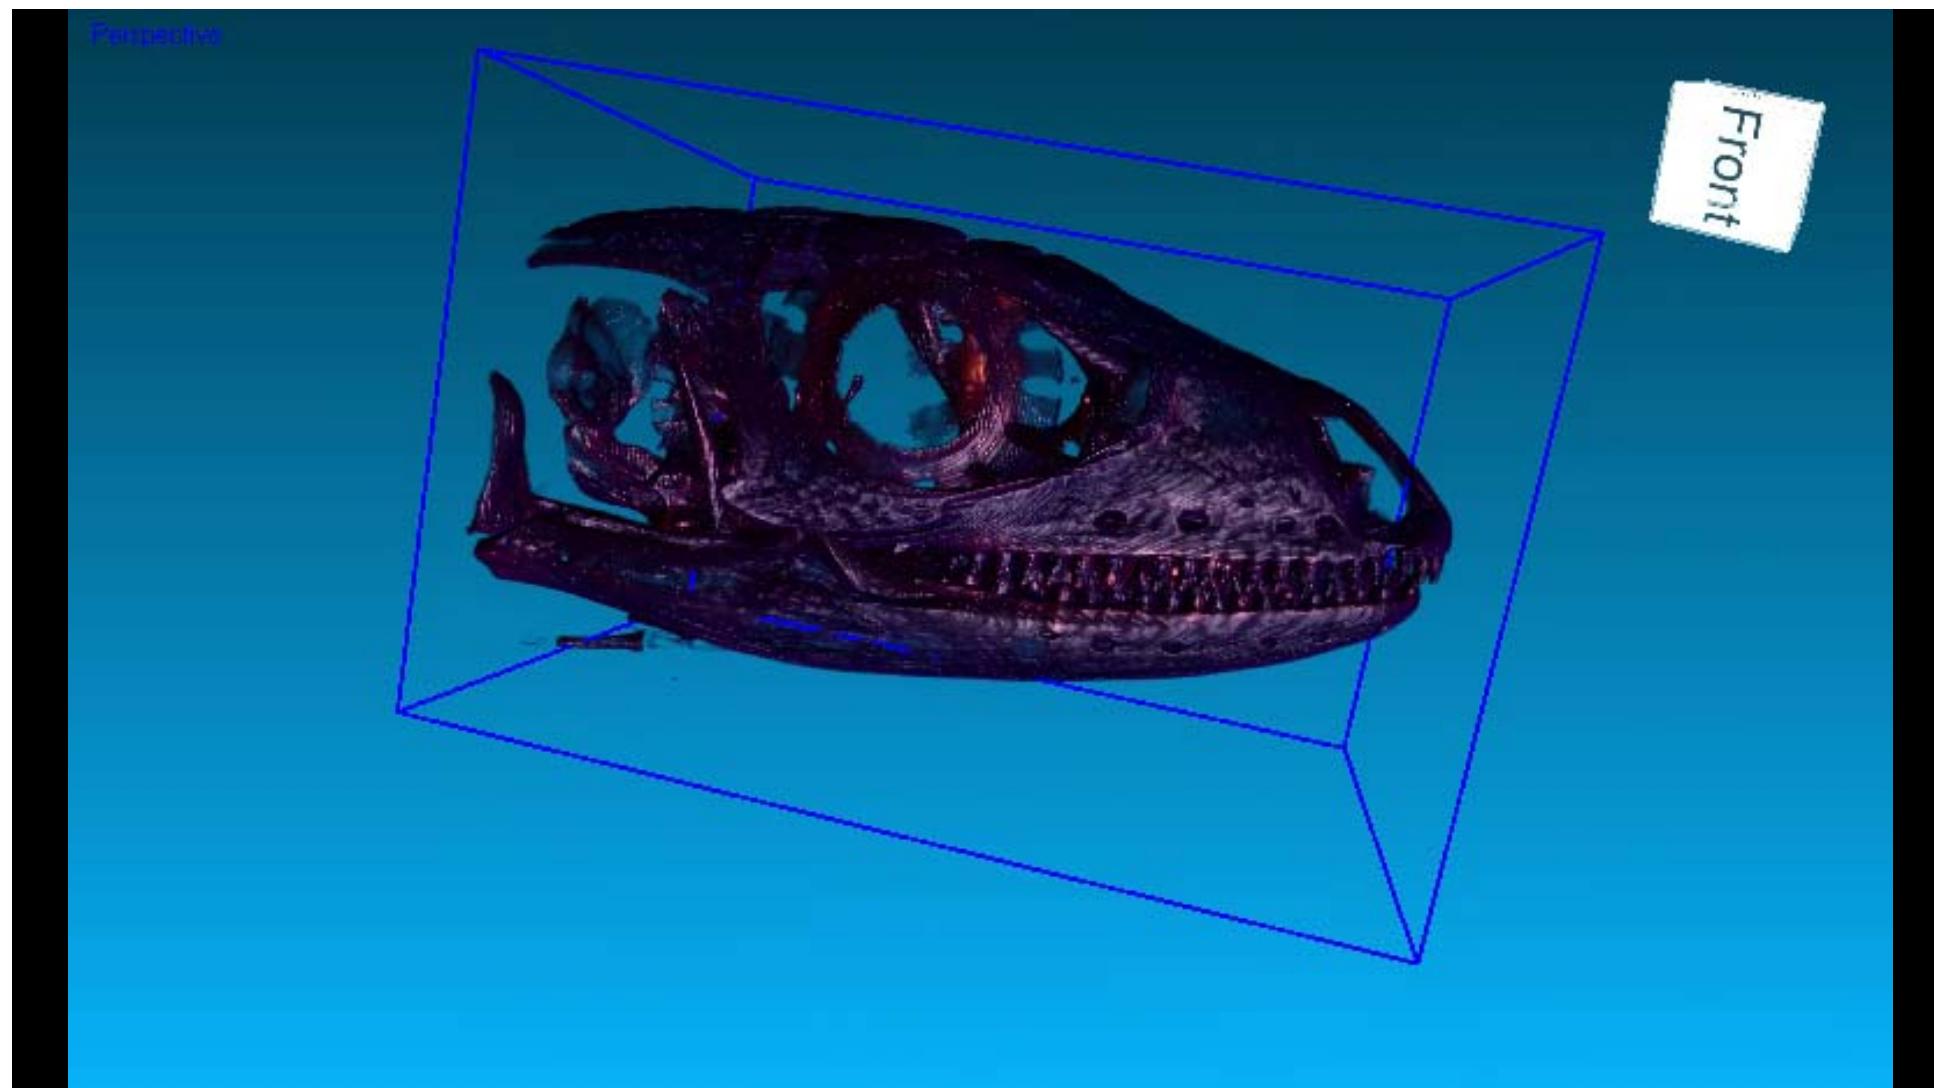

“Rendering Queries” – Ray Queries

- GPU Least-Recently-Used Cache
 - Track element usage
 - **Maintain** list with least-used element in front

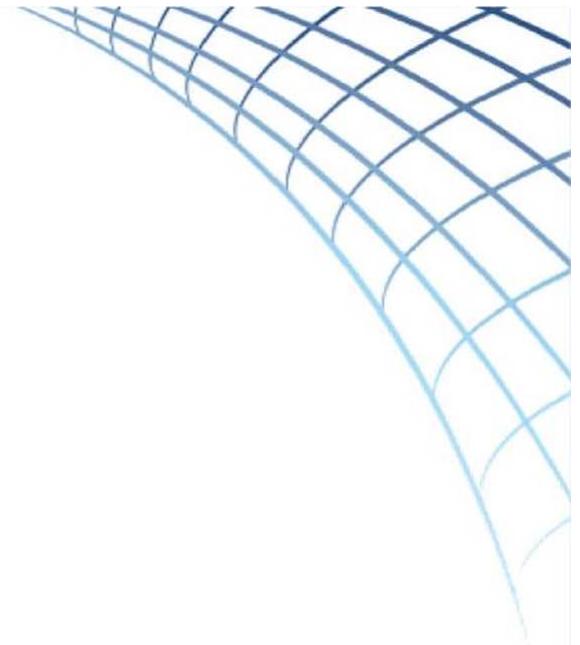

Node/Brick
Pool

[Crassin, Lefebvre, Neyret, Eisemann - i3D 2009]

[Crassin, Neyret, Lefebvre, Eisemann - GPUPro2010]

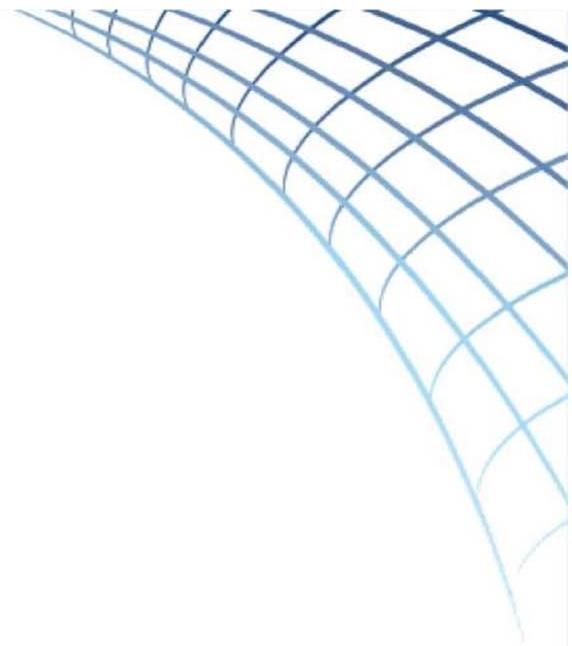

GigaVoxels

- Interactive Out-of-core Exploration of Volume Data
- Fully GPU-oriented
 - Rendering Algorithm
 - Data Representation

Major remaining challenges:

- Bandwidth to GPU
- Storage (volumes grow quickly)

Questions?

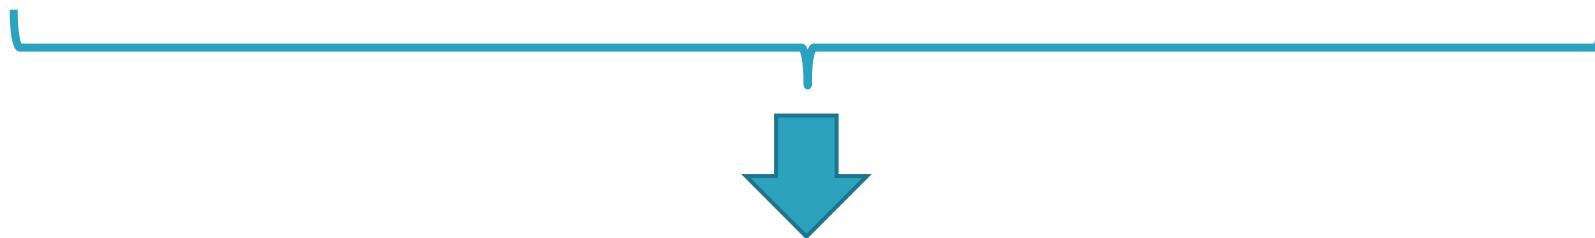

Large-Scale Voxels

Major remaining challenges for less performant systems:

- Bandwidth to GPU
- Storage (volumes grow quickly)

compression

[Dado, Kol, Thiery, Bauszat, Eisemann – Eurographics 2016]

2^{51} voxels = 2,251,799,813,685,248 Voxels

TWO HOUSEHOLDS, BOTH ALIKE IN DIGNITY, IN
MUTINY, WHERE CIVIL BLOOD MAKES CIVIL HUE,
STAR-CROSS'D LOVERS TAKE THEIR LIFE; WHILE
PARENTS' STRIFE, THE FEARFUL PASSAGE OF
BUT THEIR CHILDREN'S END, NOUGHT COULD
PATIENT EARS ATTEND, WHAT HERE SHALL ME
VERONA, WHERE WE LAY OUR SCENE, FROM A
UNCLEAN, FROM FORTH THE FATAL LOINS OF
MISADVENTURED PITEOUS OVERTHROWS DO
DEATH-MARK'D LOVE, AND THE CONTINUANCE
IS HOW THE TWO HOURS' TRAFFIC OF OUR STAGE
SHALL STRIVE TO MEND, TWO HOUSEHOLDS,
GRUDGE BREAK TO NEW MUTINY, WHERE CIVIL
FOES A PAIR OF STAR-CROSS'D LOVERS TAKE
THEIR PARENTS' STRIFE, THE FEARFUL PASSAGE
WHICH, BUT THEIR CHILDREN'S END, NOUGHT
WITH PATIENT EARS ATTEND, WHAT HERE SHALL ME
FAIR VERONA, WHERE WE LAY OUR SCENE, FROM A
UNCLEAN, FROM FORTH THE FATAL LOINS OF

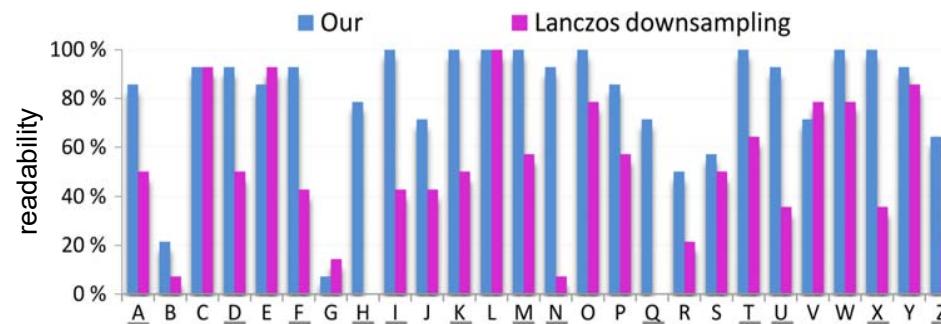

Our vs. Previous Downampling Techniques

Example: Alphabet

A B C D E F G H I J K L M N O P Q R S T U W V X Y Z

Size: 2 x 3 pixels

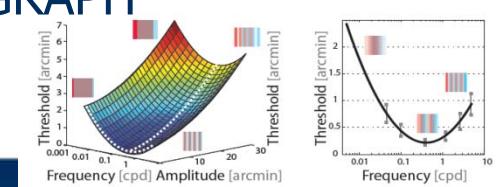

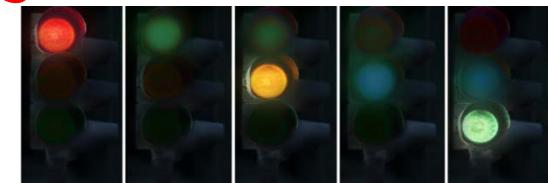

- Applications:
 - scrolling text or maps on low resolution devices
 - stock tickers, news headlines

Overcoming Physical Limitations

- Apparent Resolution Enhancement
[Didyk, Eisemann, Ritschel, Myszkowski, Seidel – SIGGRAPH 2010]
[Templin, Didyk, Ritschel, Eisemann, Myszkowski, Seidel - SCCG 2011]
- A Computational Model of Afterimages
[Ritschel & Eisemann - Eurographics'12]
Brightness
- A Perceptual Model for Disparity
[Didyk, Ritschel, Eisemann, Myszkowski, Seidel - SIGGRAPH 2011/SIGAsia2012]
Stereo illusion

Example

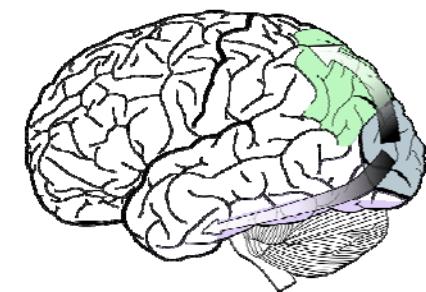

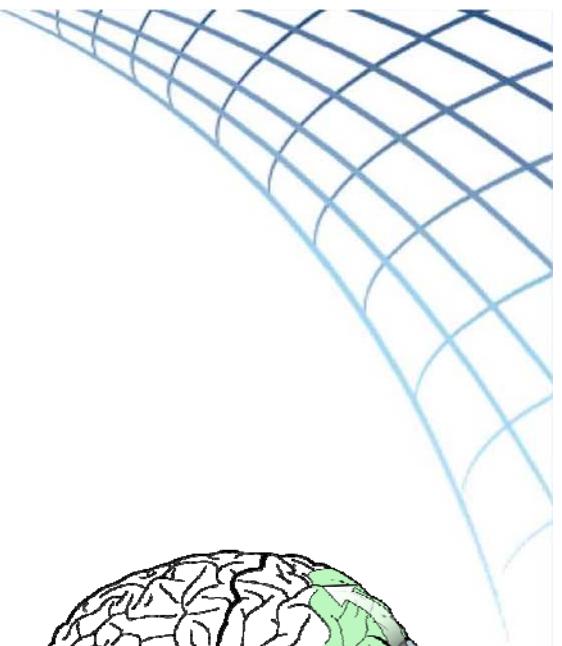

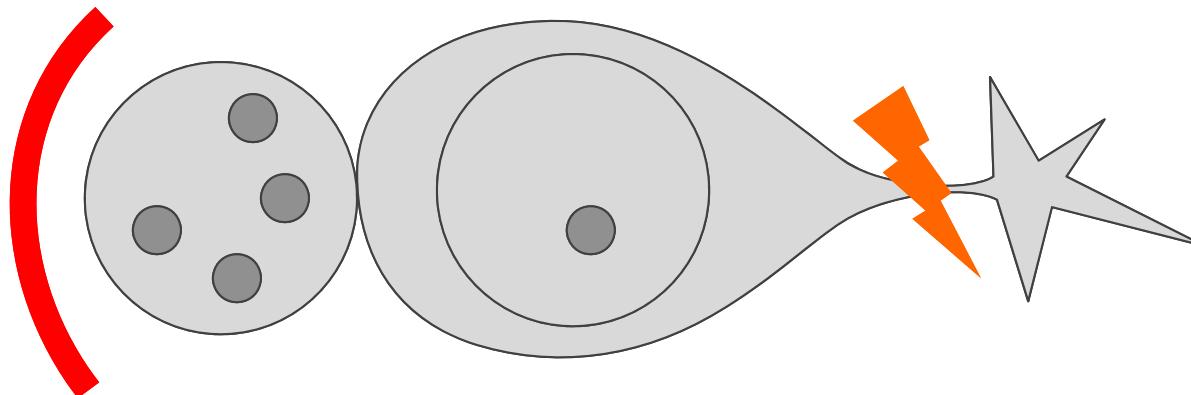

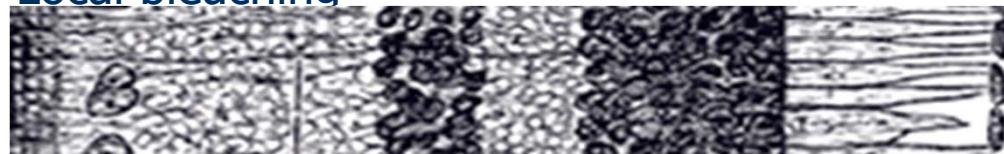

- Focus on the dark spot...

[Ritschel and Eisemann - Eurographics2012]

Chromatic Adaptation

- Local bleaching

Adaptation state relates to the bleaching in the retinal cells

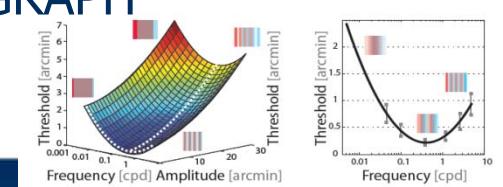

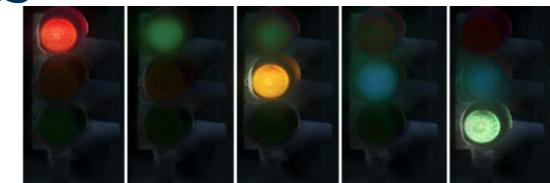

[Ritschel and Eisemann - Eurographics2012]

Overcoming Physical Limitations

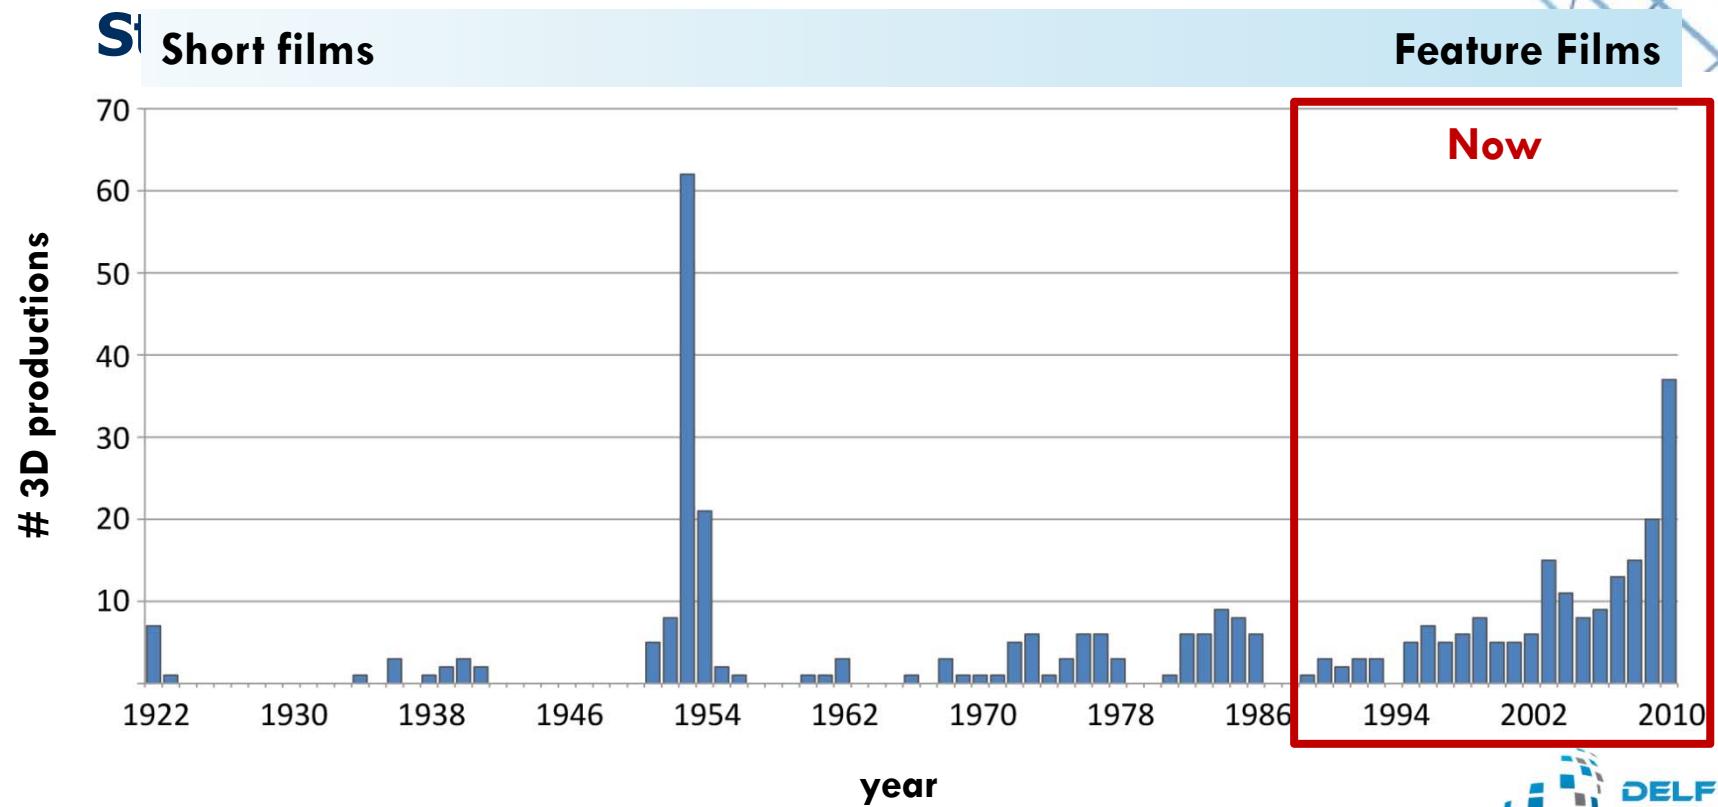

- Apparent Resolution Enhancement
[Didyk, Eisemann, Ritschel, Myszkowski, Seidel – SIGGRAPH 2010]
[Templin, Didyk, Ritschel, Eisemann, Myszkowski, Seidel - SCCG 2011]
- A Computational Model of Afterimages
[Ritschel & Eisemann - Eurographics'12]
Brightness
- A Perceptual Model for Disparity
[Didyk, Ritschel, Eisemann, Myszkowski, Seidel - SIGGRAPH 2011/SIGAsia2012]
Stereo illusion

Stereo Vision

~~Scene manipulation~~
Viewing discomfort

Viewing comfort

[Didyk, Ritschel, Eisemann, Myszkowski, Seidel – SIGGRAPH 2011]
[Didyk, Ritschel, Eisemann, Myszkowski, Seidel – SIGGRAPH Asia 2012]

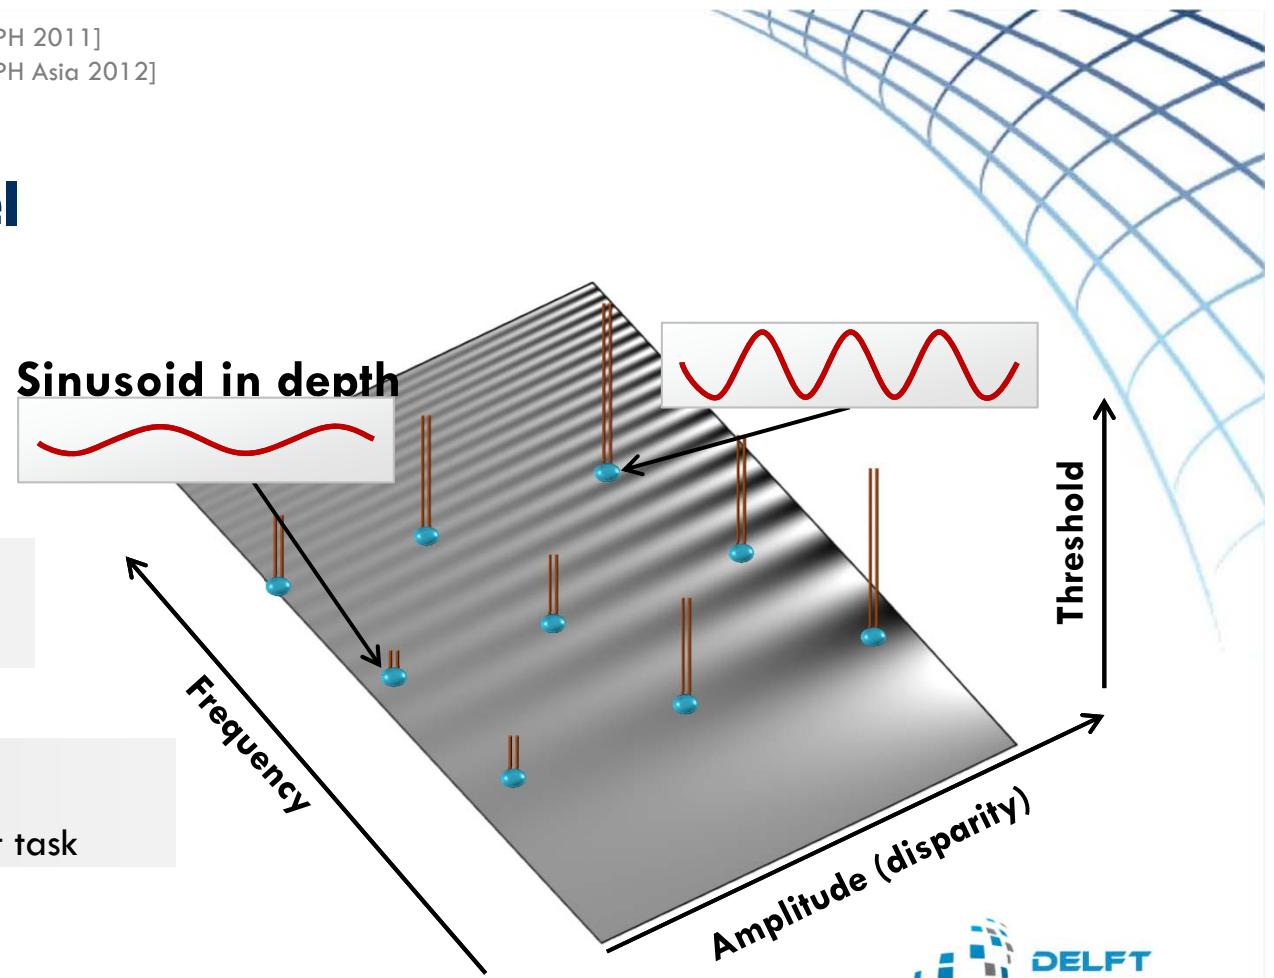

Perception Model

Parameter space:

Sample the space

Measure thresholds

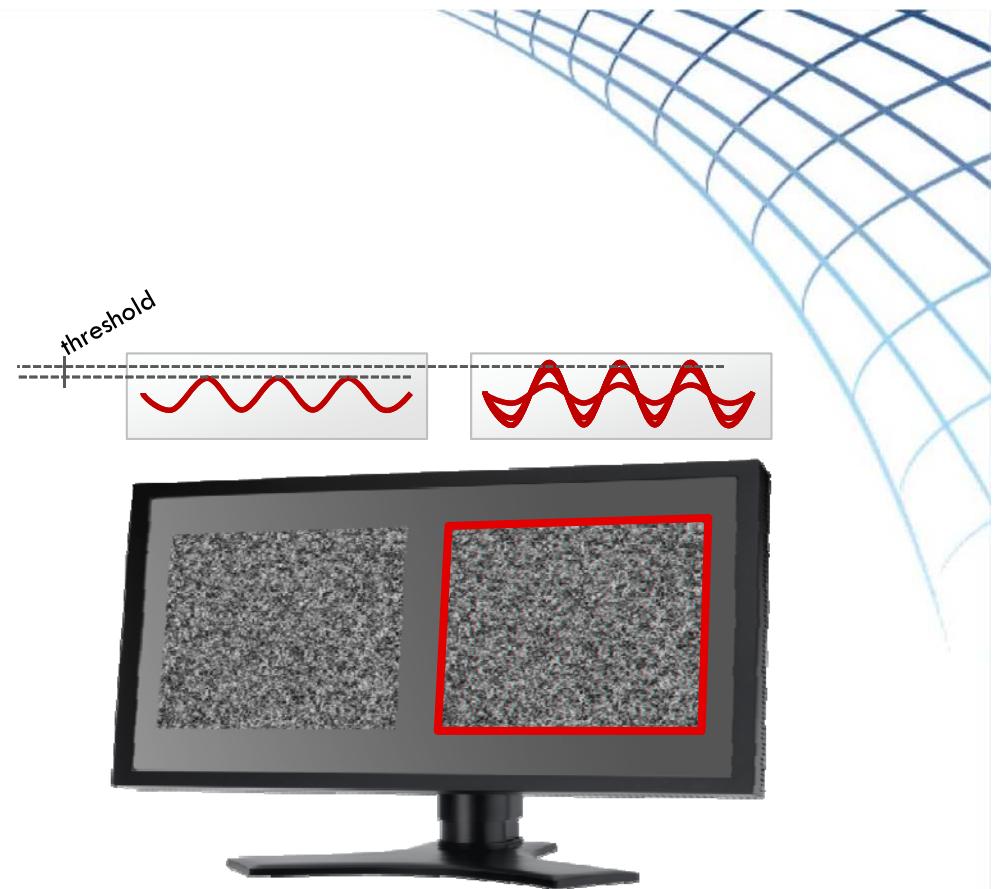

- Experiment with adjustment task

Measurements

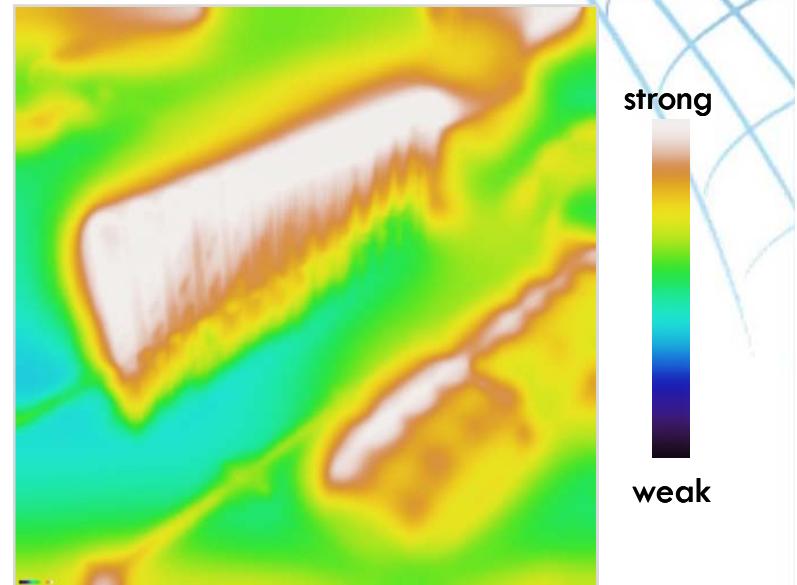

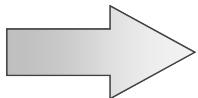

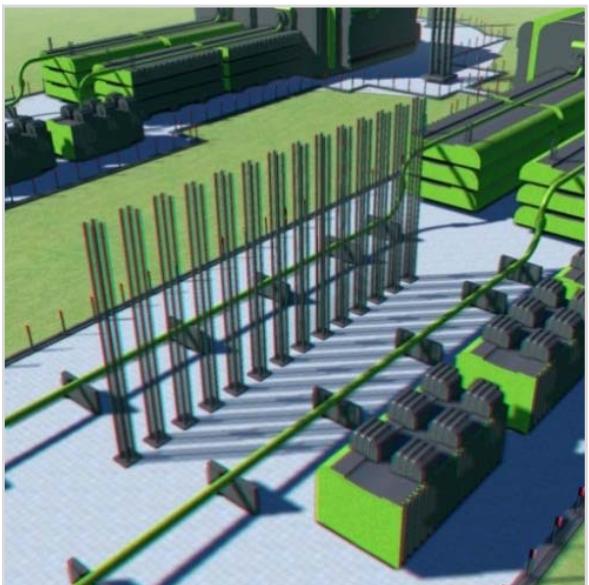

Thresholds measurement:

- Two sinusoidal corrugations
- Which one has more depth? (left/right)
- Amplitude adjustment (PEST with 2AFC)

[Didyk, Ritschel, Eisemann, Myszkowski, Seidel – SIGGRAPH 2011]
[Didyk, Ritschel, Eisemann, Myszkowski, Seidel – SIGGRAPH Asia 2012]

Stereo Vision – Metric

[Didyk, Ritschel, Eisemann, Myszkowski, Seidel – SIGGRAPH 2011]
[Didyk, Ritschel, Eisemann, Myszkowski, Seidel – SIGGRAPH Asia 2012]

Stereo Vision – Metric

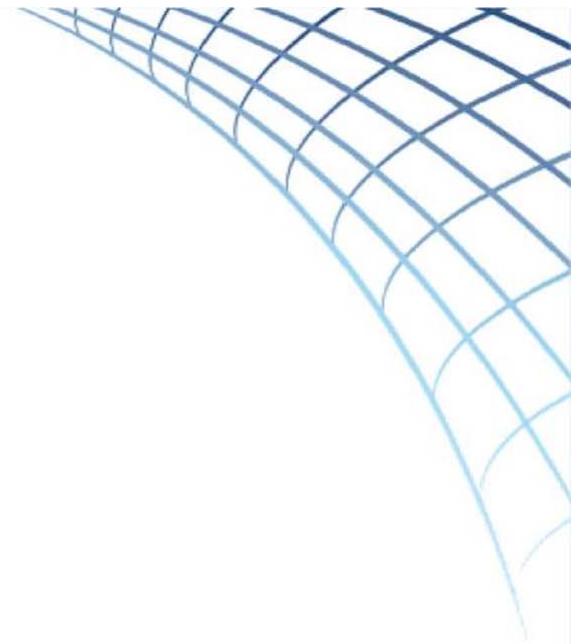

Standard stereo

Backward-compatible stereo

Perceptual Rendering

Taking perception into account

- can reduce computational cost
- can increase quality/comfort
- is advantageous even on modern displays

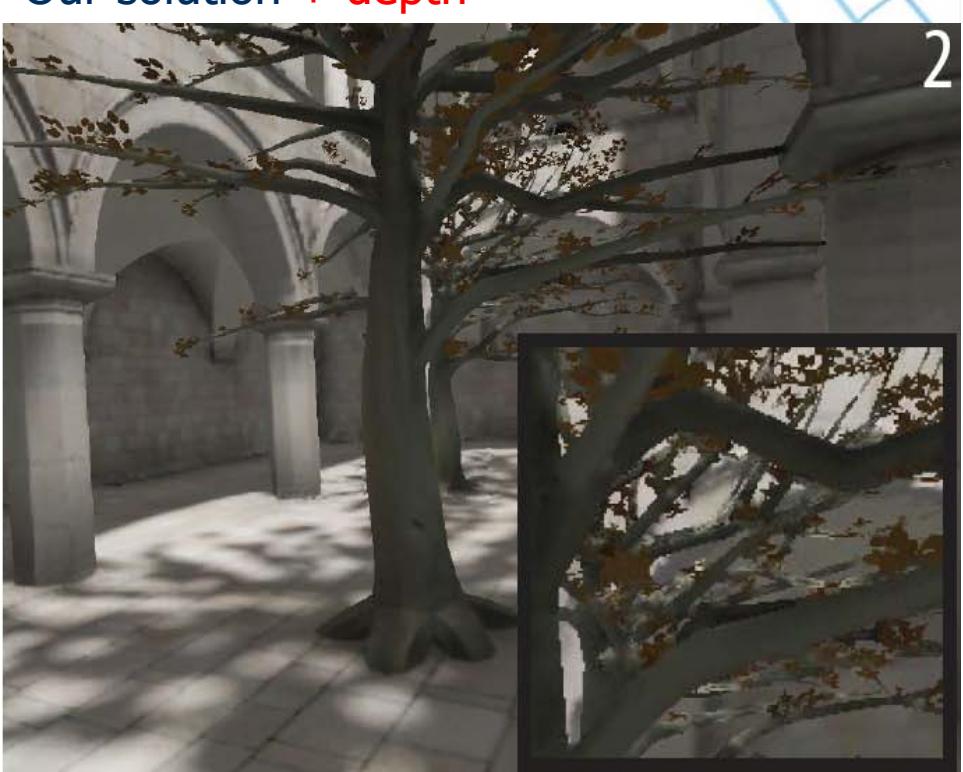

[Pajak, Herzog, Eisemann, Myszkowski, Seidel - EG 2014]

Streaming of Rendered Content with Depth Compression

H264

Visualization and Perception

- Realistic Rendering
- Perceptual Methods
- Visualization & Interface

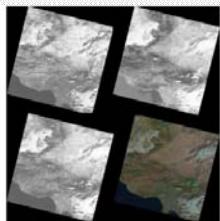

Effective Data Visualization Requires

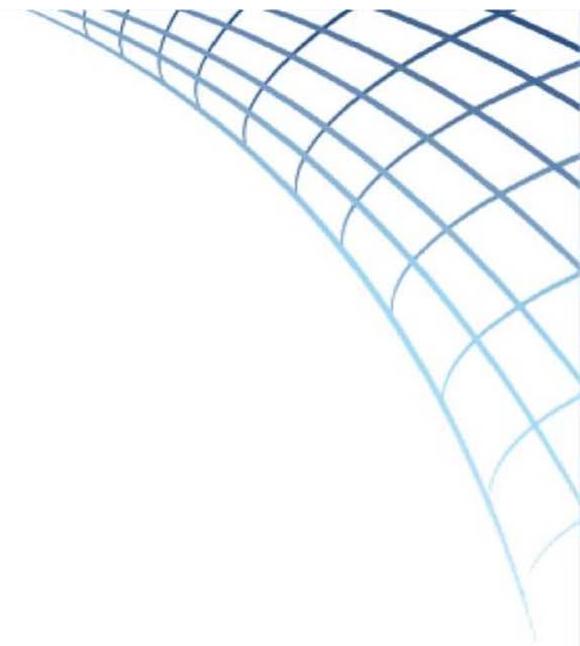

- **Large-Scale Rendering**

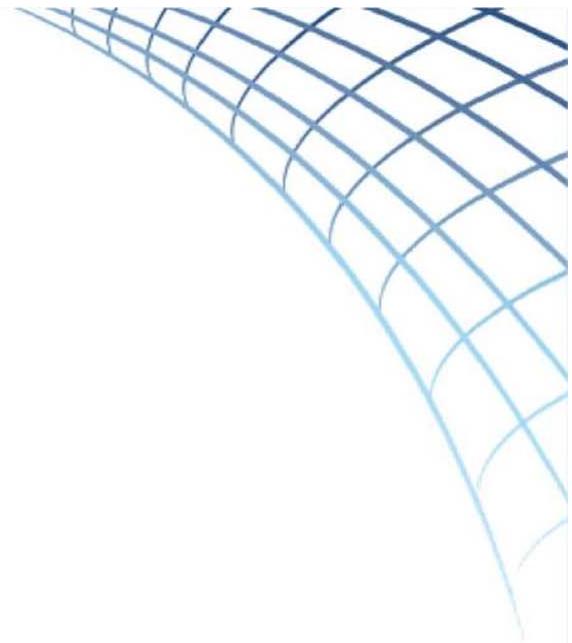

- **Visualization and Perception**

- **Data Analysis**

Questions?

Koninklijk Instituut Van Ingenieurs

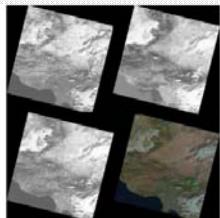

Effective Data Visualization Requires

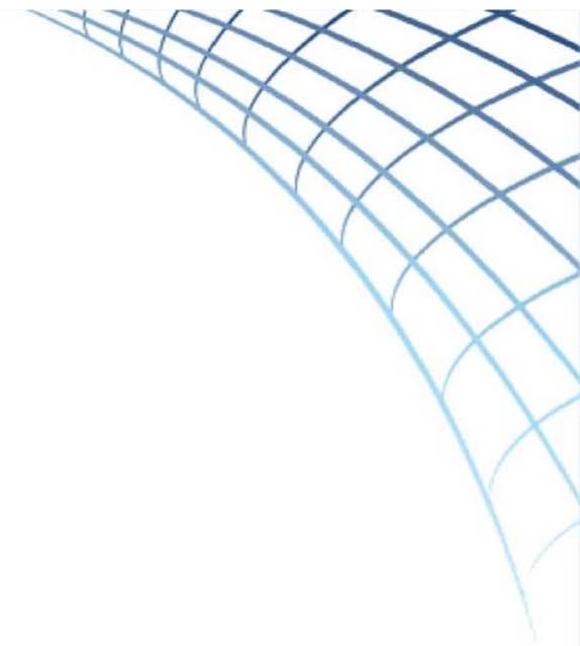

- **Large-Scale Rendering**

- **Visualization and Perception**

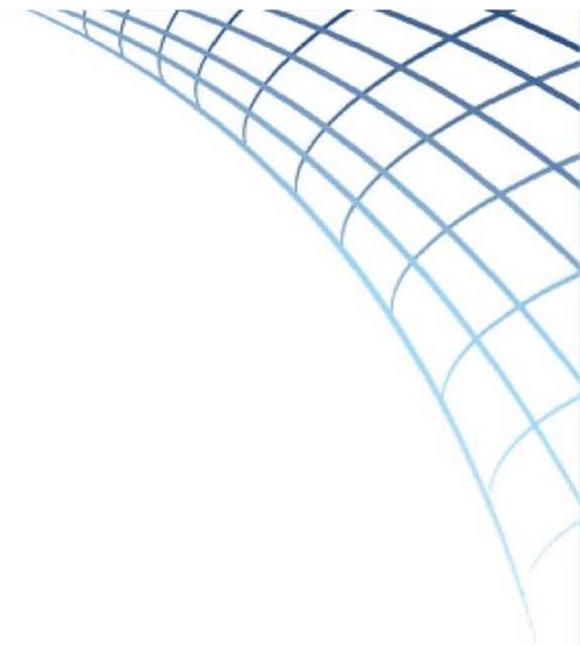

- **Data Analysis**

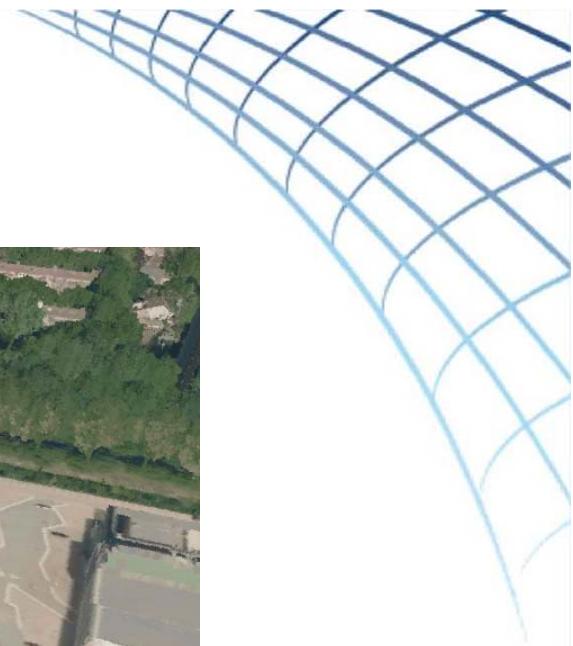

Data Analysis

- High-dimensional/Heterogeneous Data
- Dimensionality Reduction
- Visual Analytics

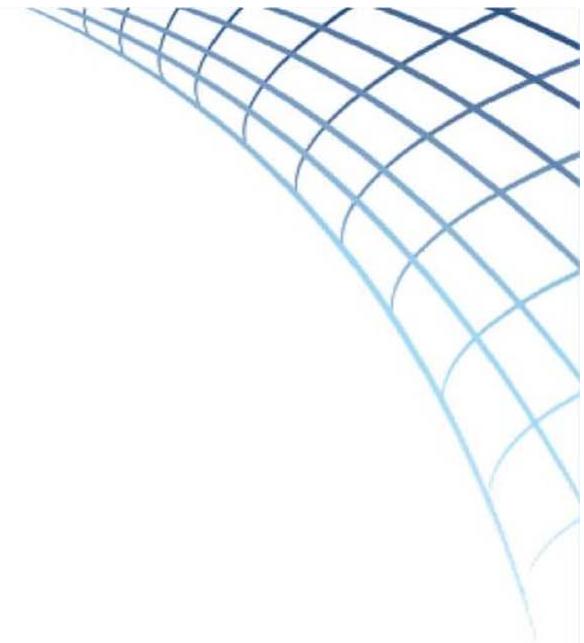

Data Analysis

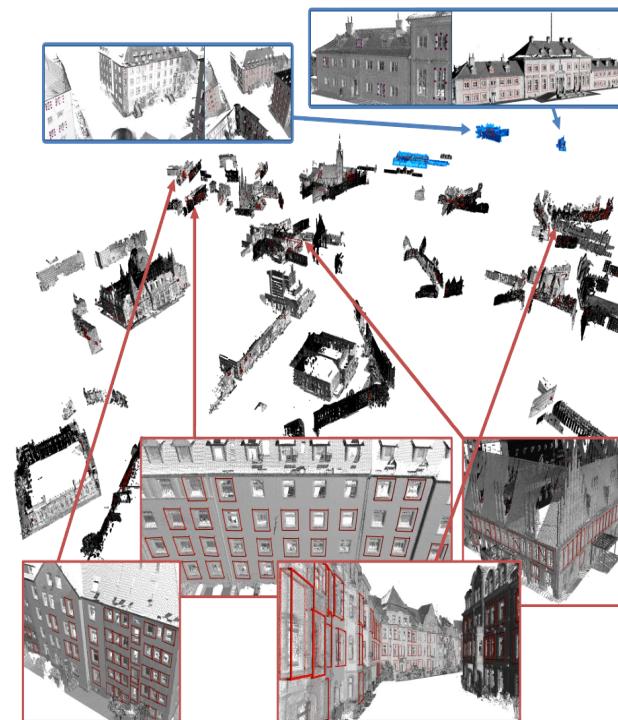

Koninklijk Instituut Van Ingenieurs

[Sunkel, Jansen, Wand, Eisemann, Seidel EG 2012]

Supported Recognition

- here 128 M points, find all windows: 2 min

Koninklijk Instituut Van Ingenieurs

[Silva, Eisemann, Bidarra, Coelho - PCG 2015]

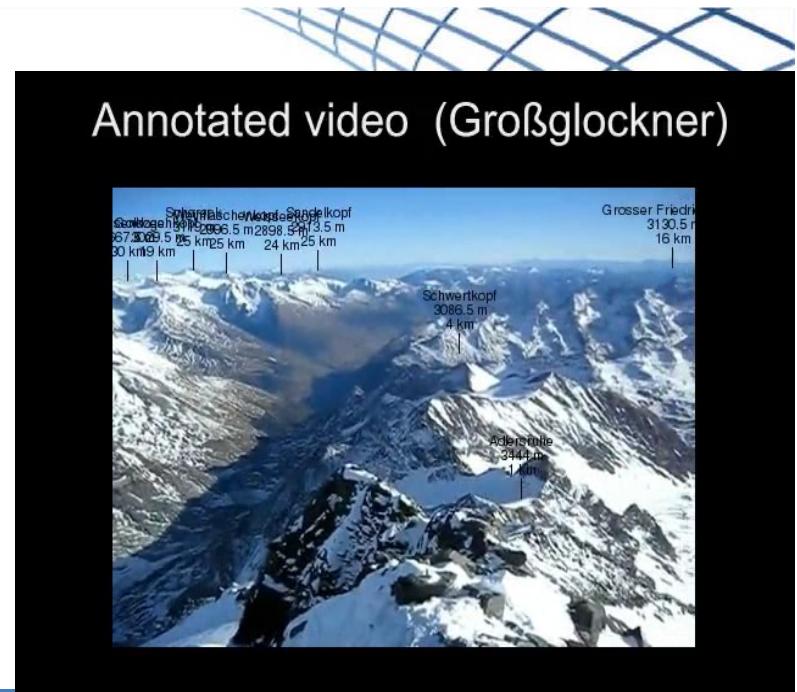

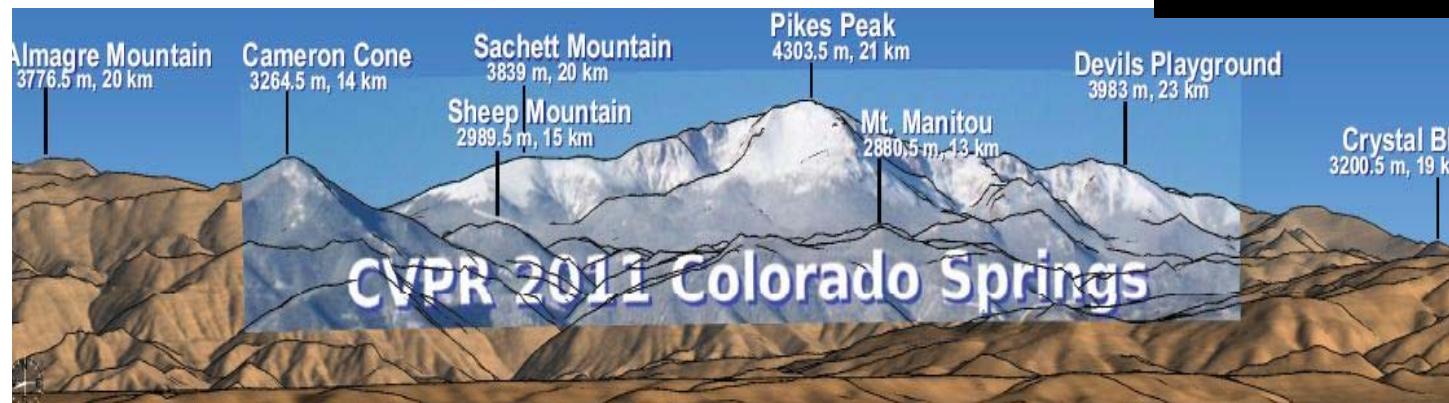

Model Construction: Blueprints + Rules +...

[Baboud, Cadik, Eisemann, Seidel – CVPR’11]

Model Construction

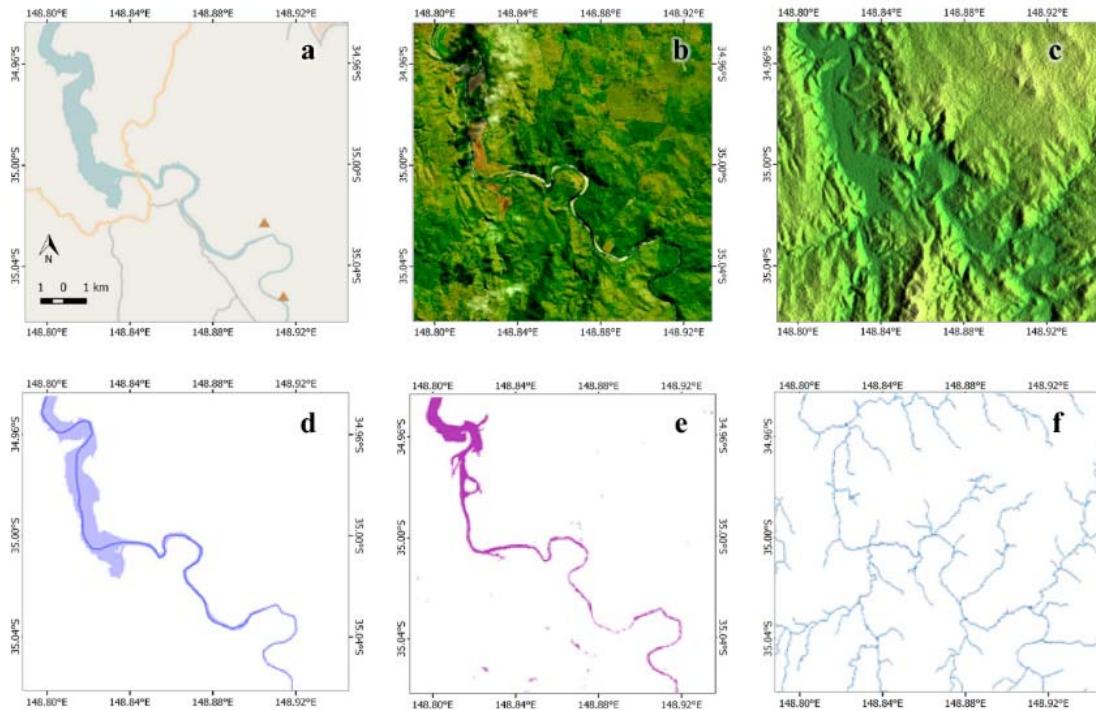

- Heterogeneous sources

[Donchyts, Schellekens, Winsemius, Eisemann, van de Giesen - Remote Sens. 16]

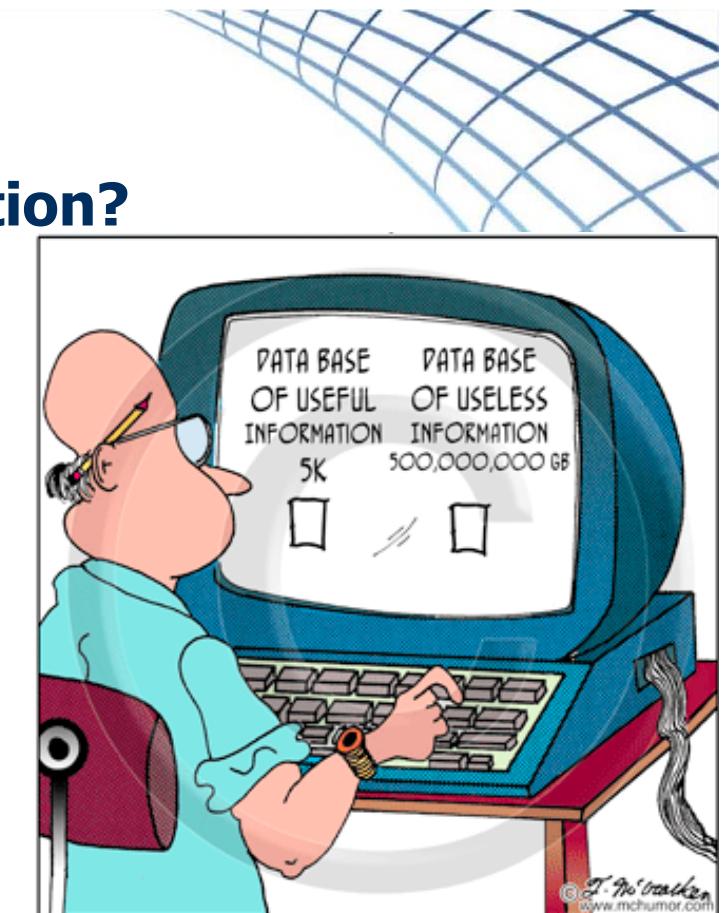

Model Construction

- Integrating Data Sets for River Validation

Data growth = increase in information?

- What if you do not yet know what “useful” is?

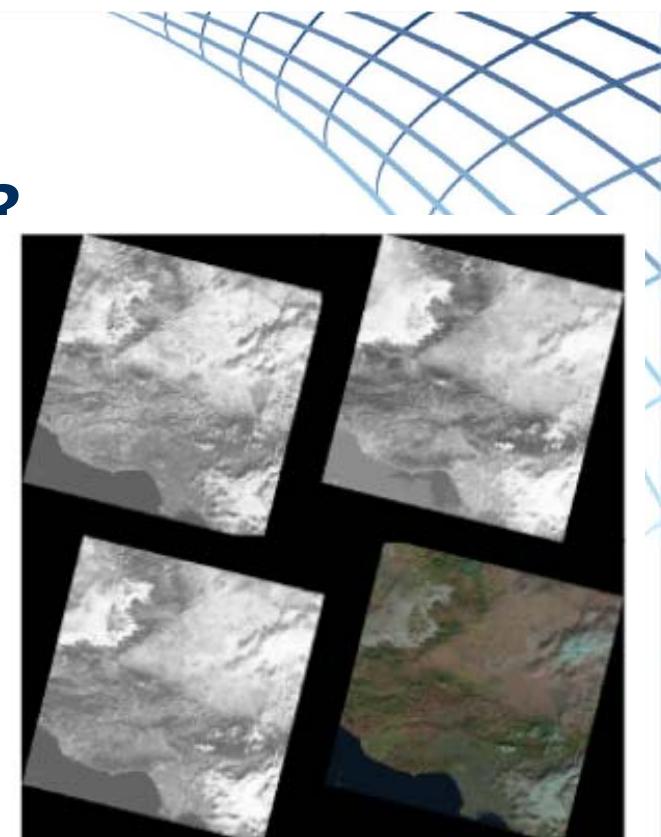

General Approach to Visual Analytics?

Visual Analytics:

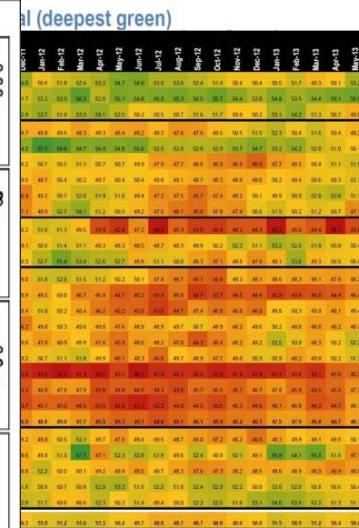

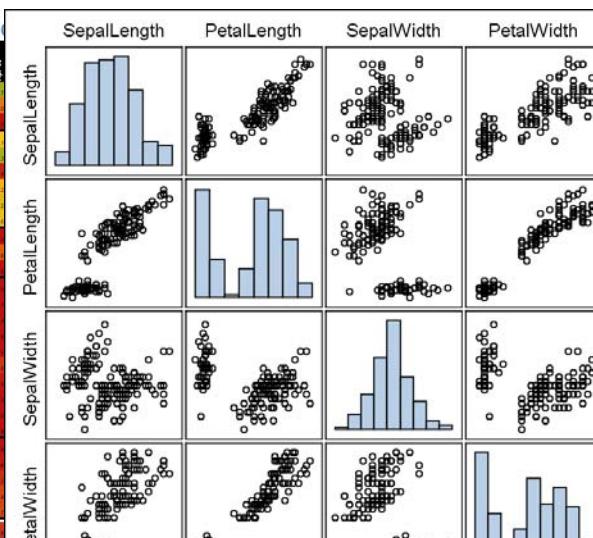

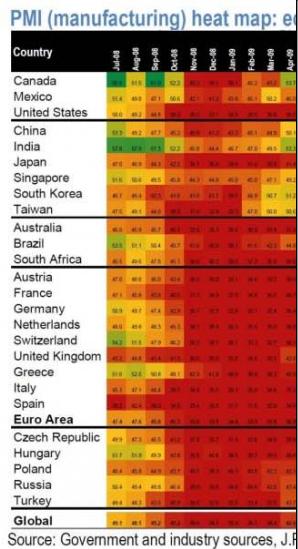

Interactive hypothesis finding via Data

- Many challenges, but we will focus on:
- Dimensionality

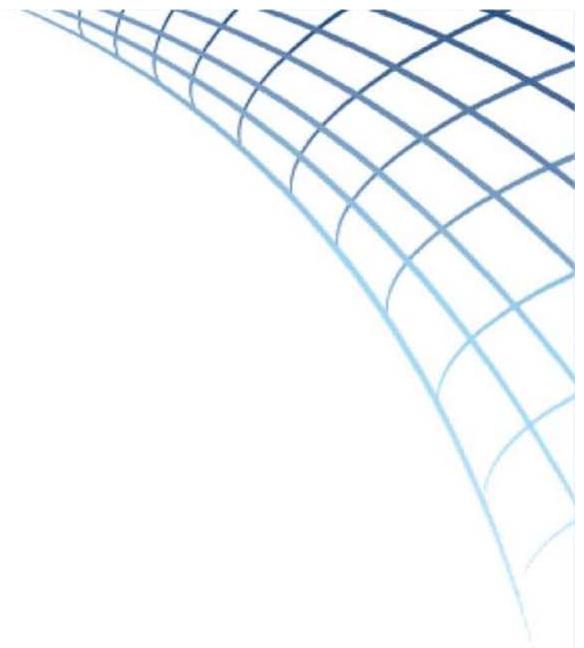

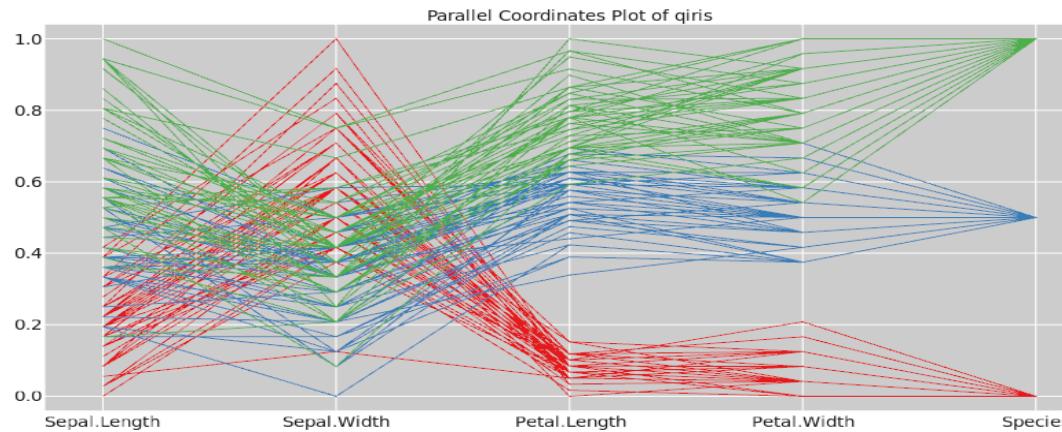

High-Dimensional Data

- Standard Solutions:

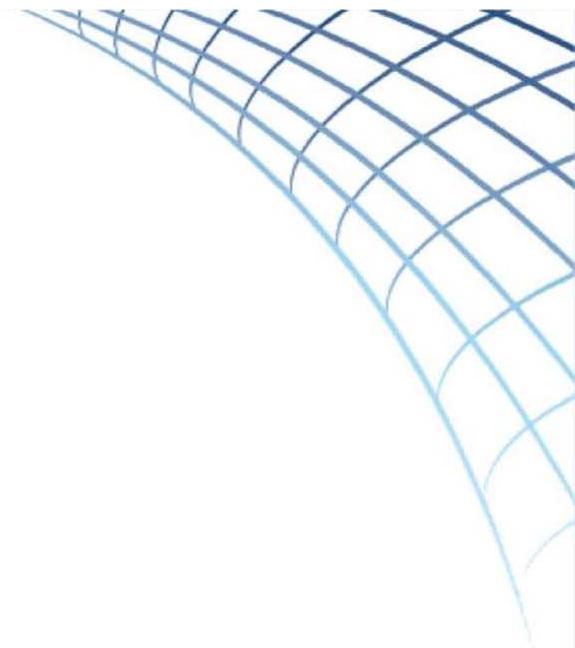

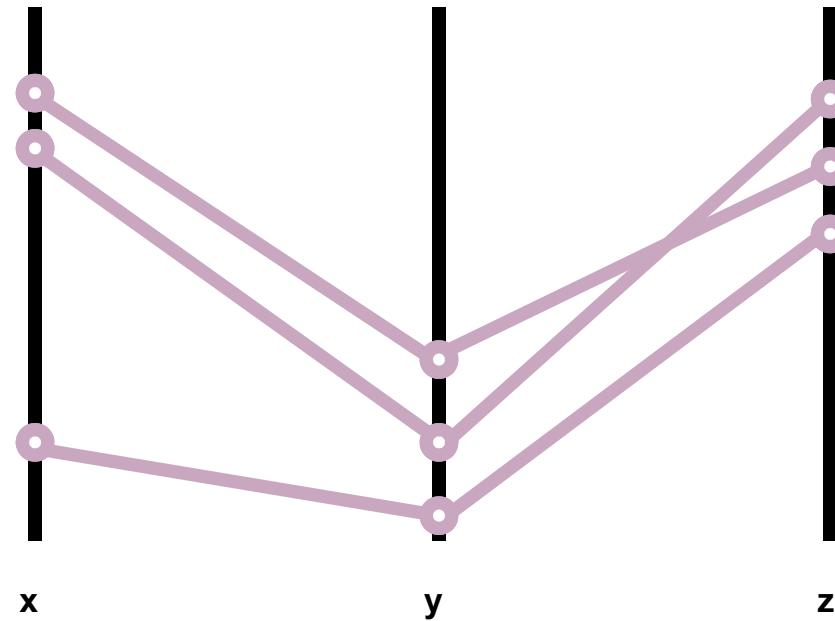

Parallel Coordinate Plots

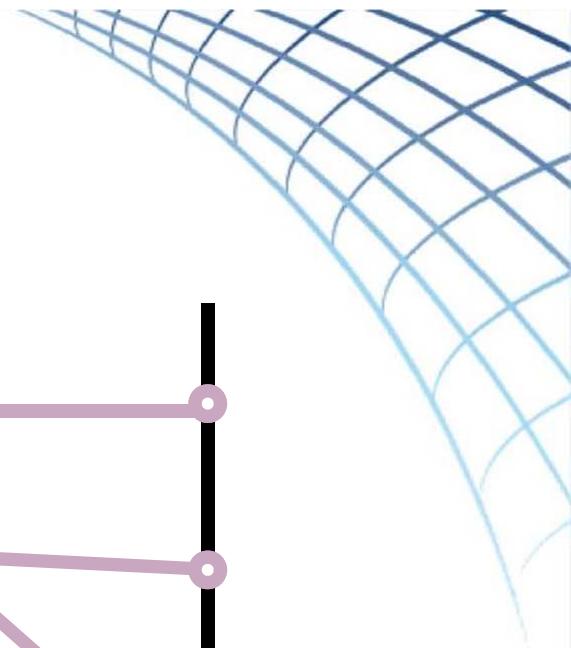

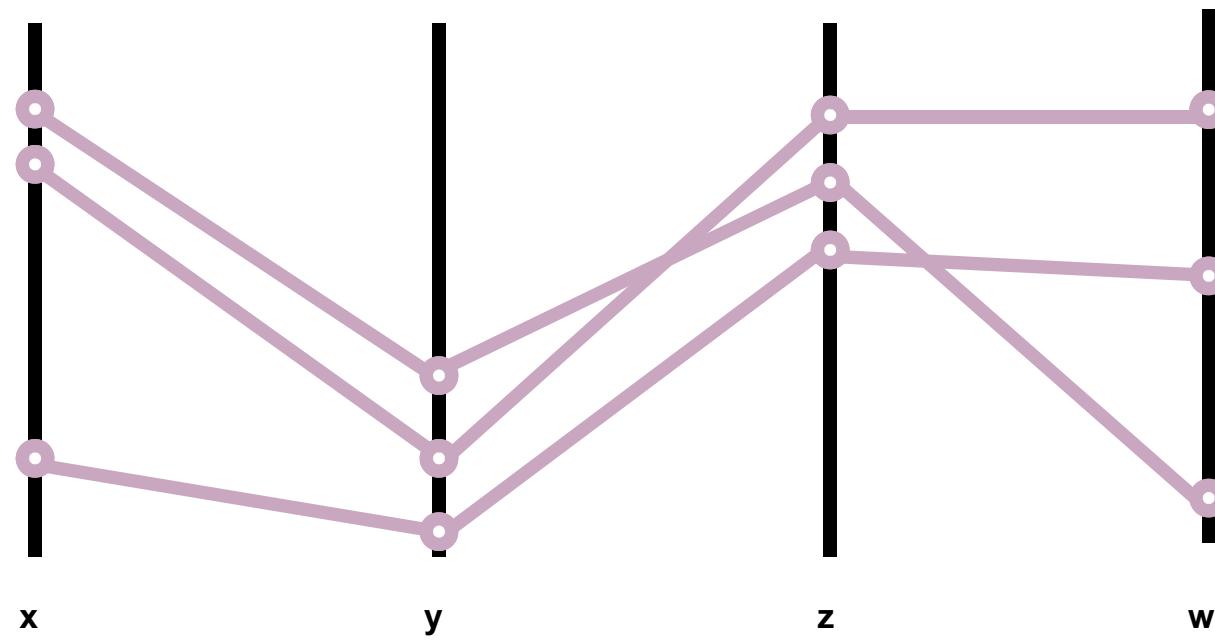

- More dimensions in one view
- Easier detection of patterns/outliers in data

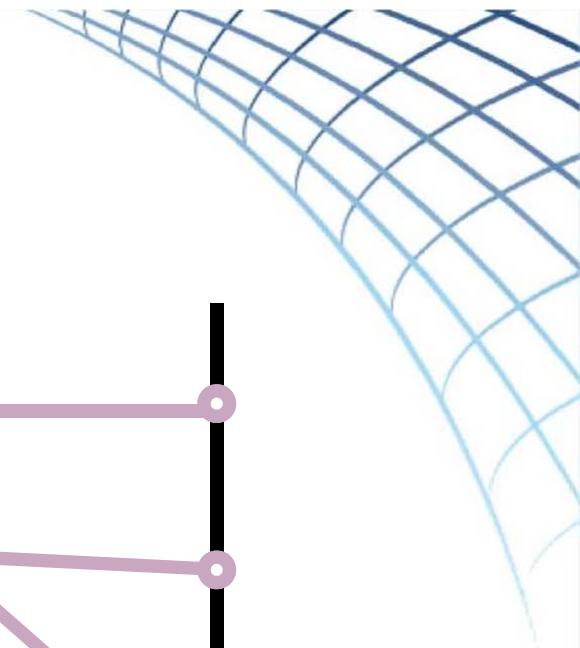

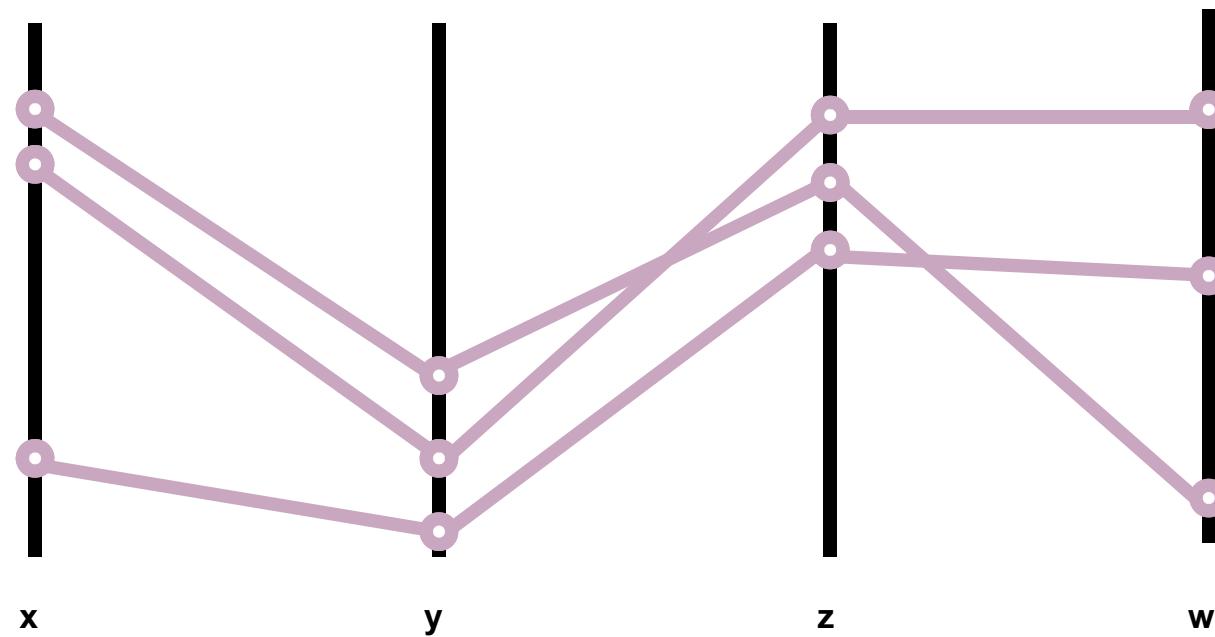

Parallel Coordinates

Parallel Coordinates

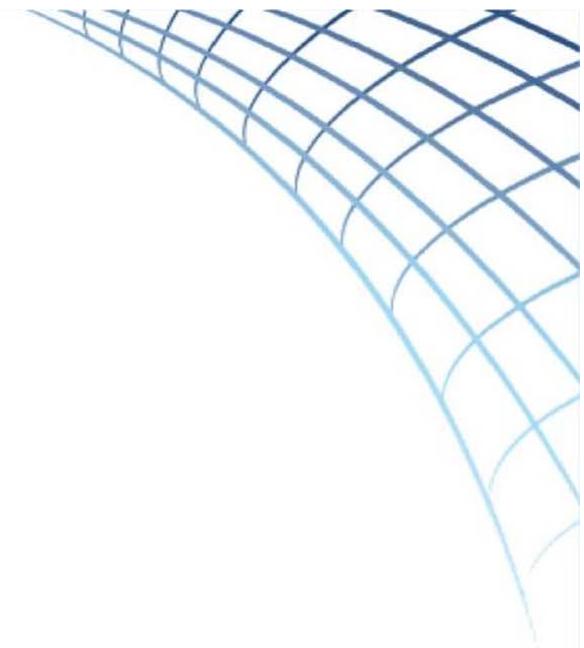

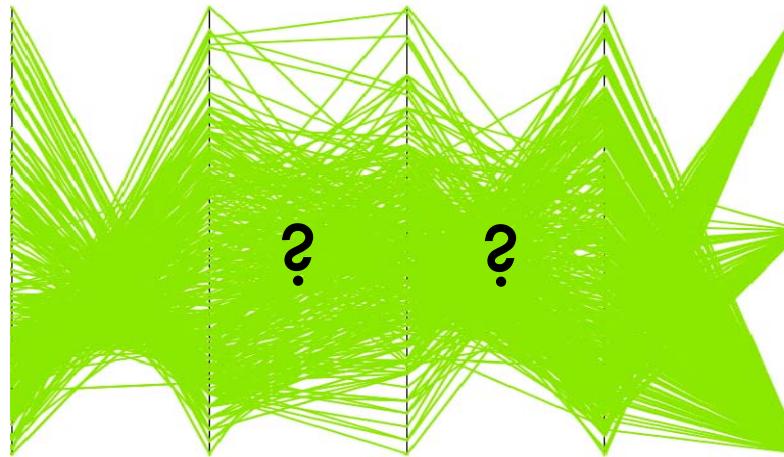

Parallel Coordinates

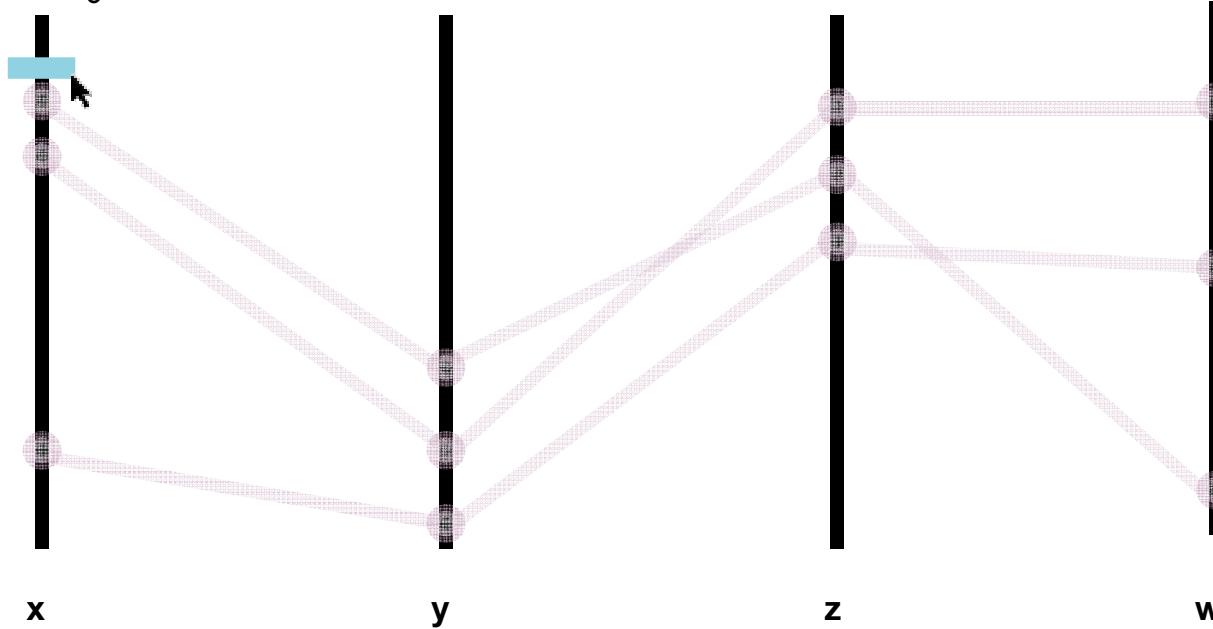

The Problem

- Clutter!

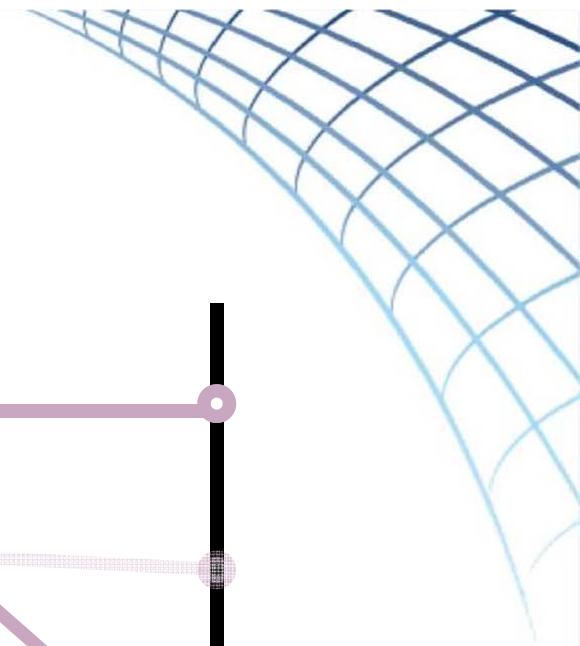

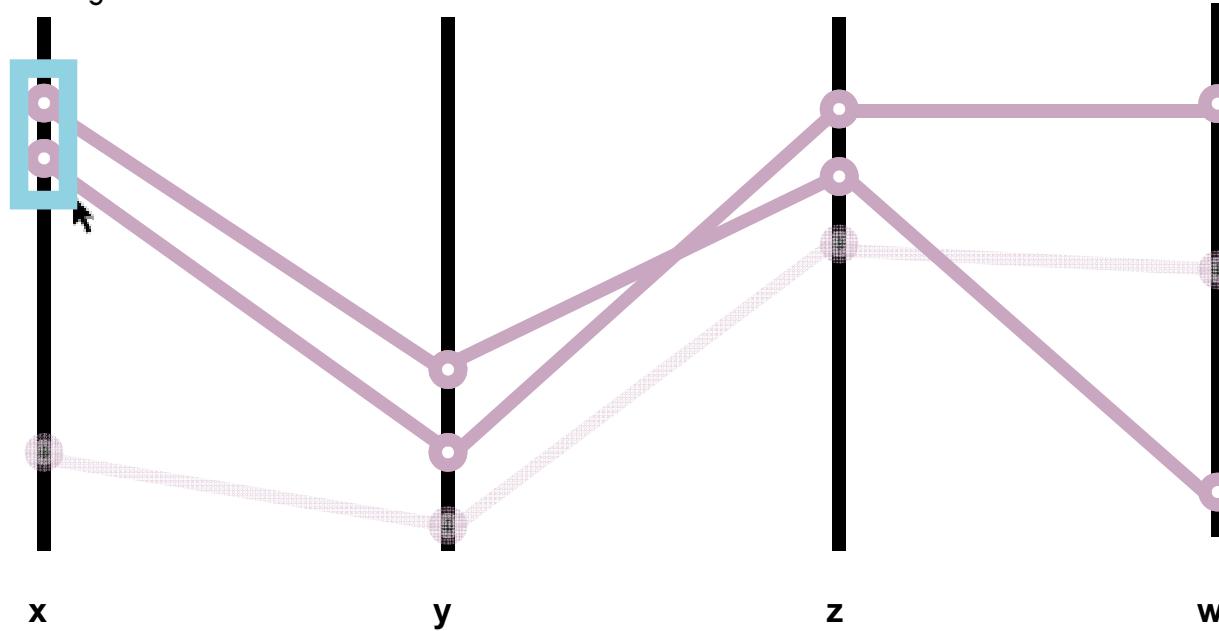

Parallel Coordinates

Drag a selection box on axis to **brush** data

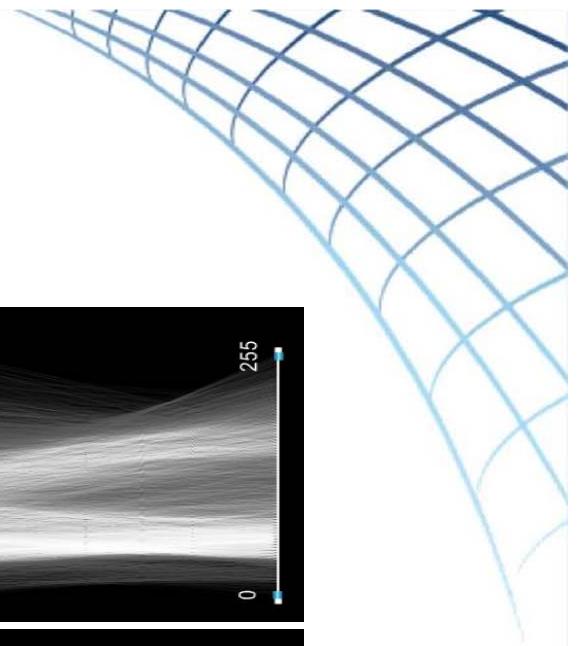

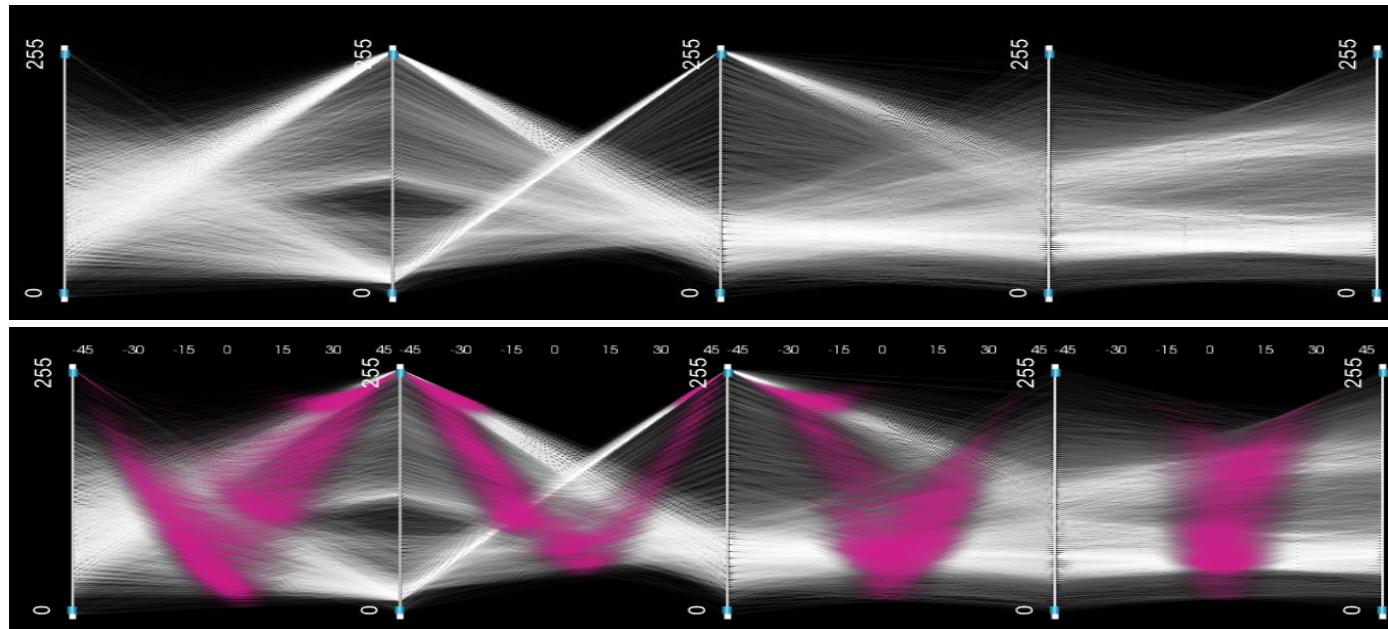

Parallel Coordinates

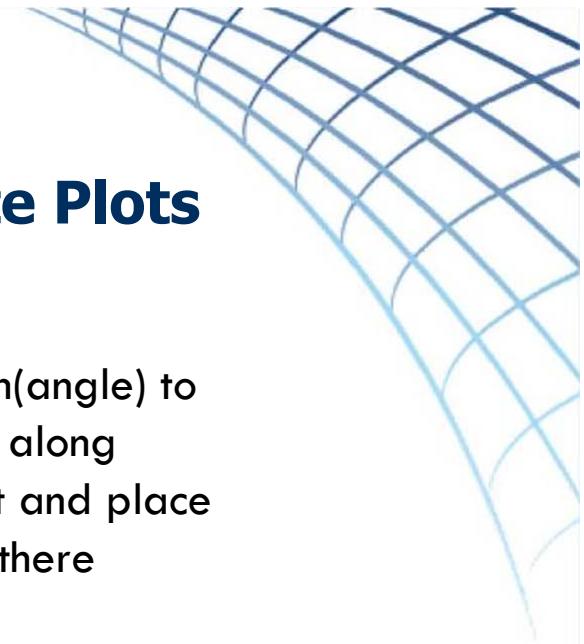

Drag a selection box on axis to **brush** data

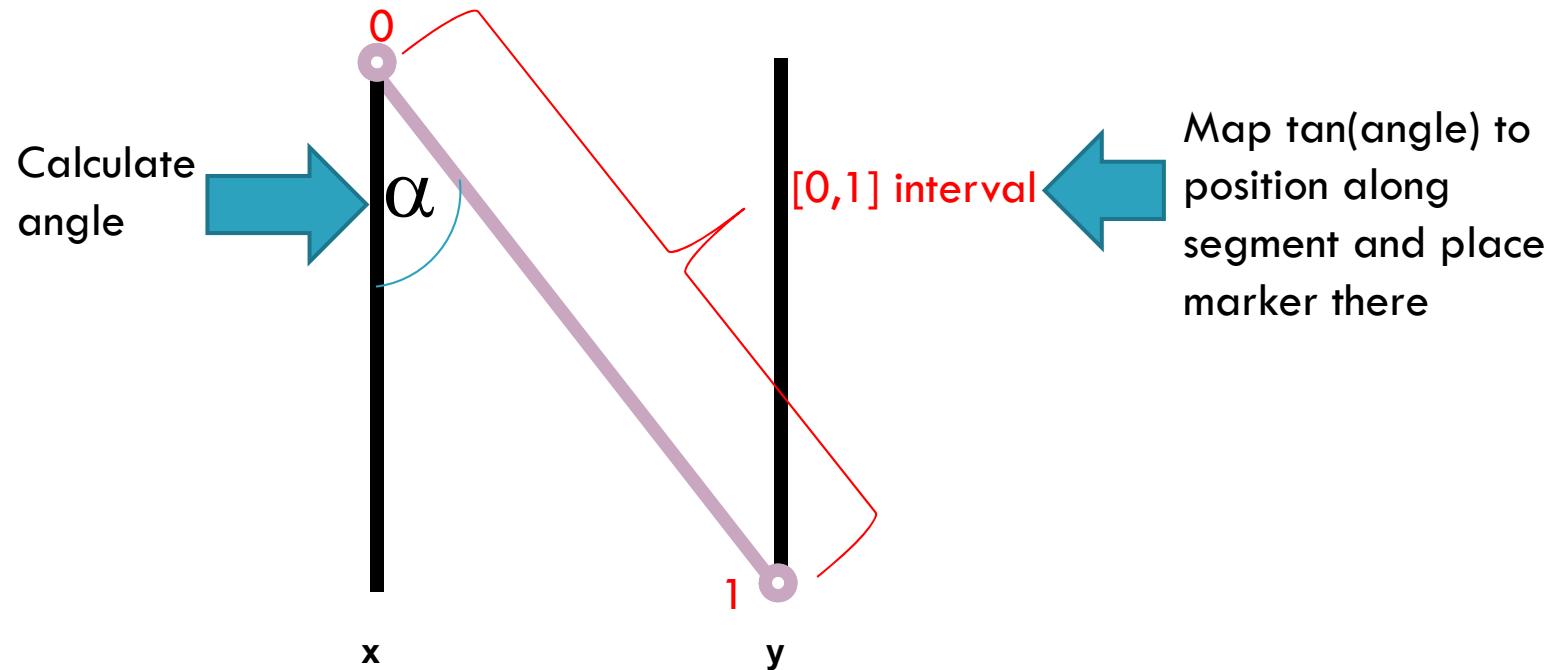

[Raidou, Eisemann, Breuwer, Eisemann, Vilanova - Vis 2015]

5-D Example

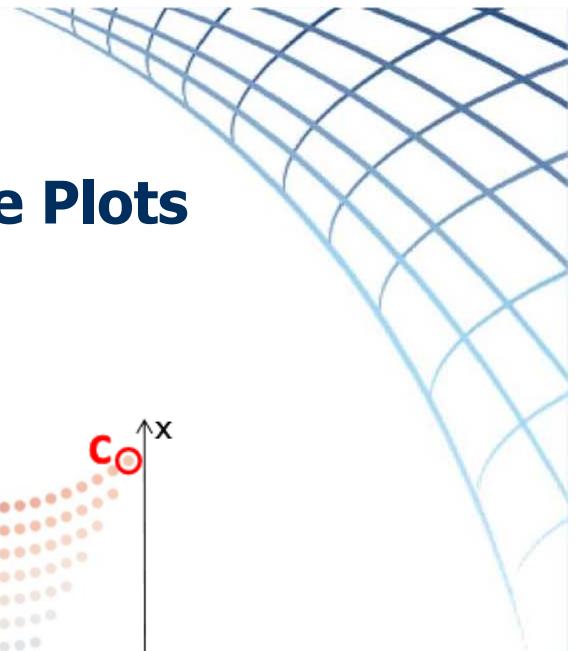

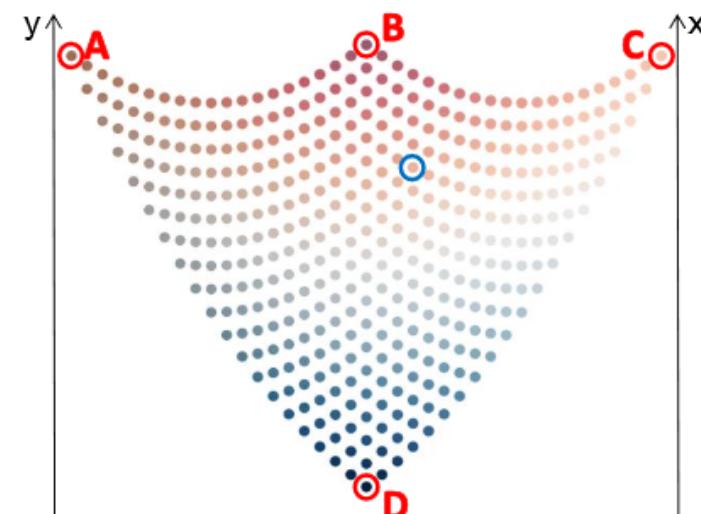

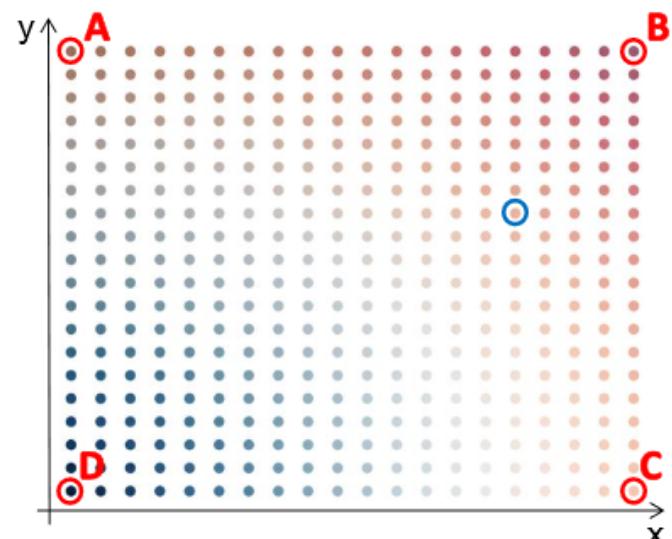

Orientation-Enhanced Parallel Coordinate Plots

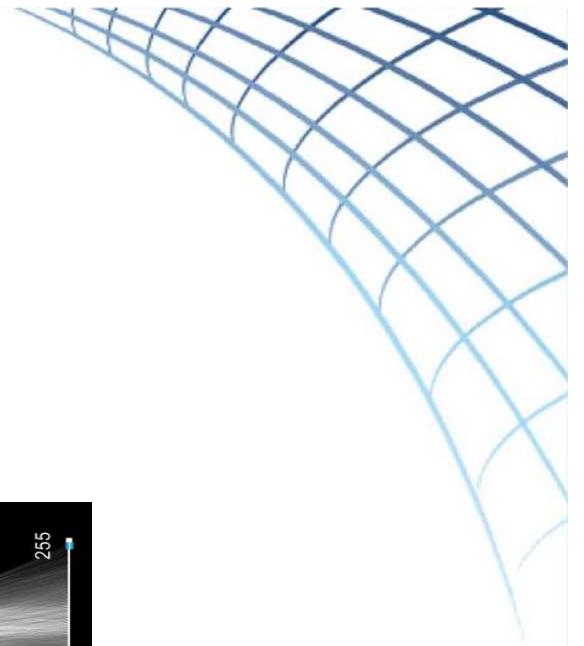

[Raidou, Eisemann, Breuwer, Eisemann, Vilanova - Vis 2015]

Orientation-Enhanced Parallel Coordinate Plots

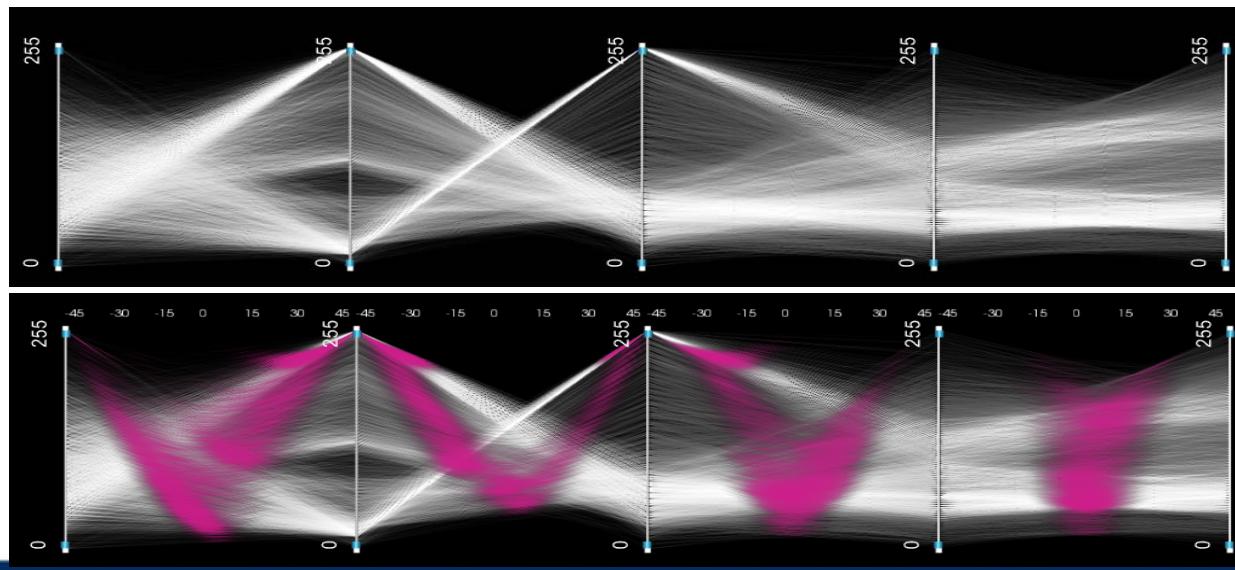

[Raidou, Eisemann, Breuwer, Eisemann, Vilanova - Vis 2015]

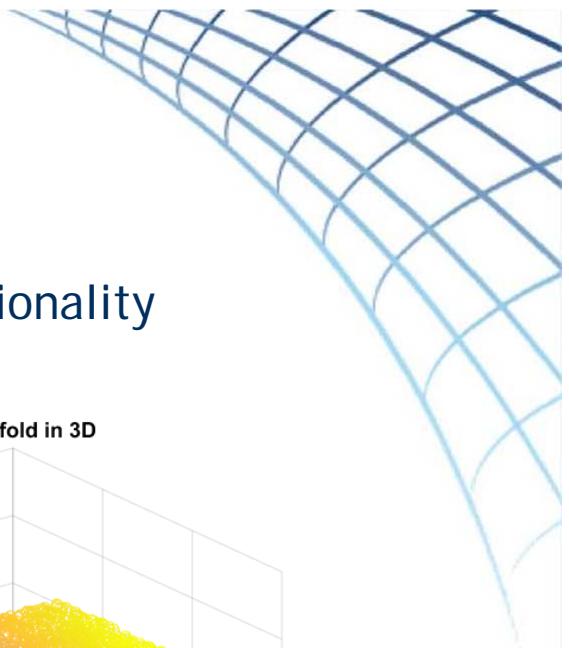

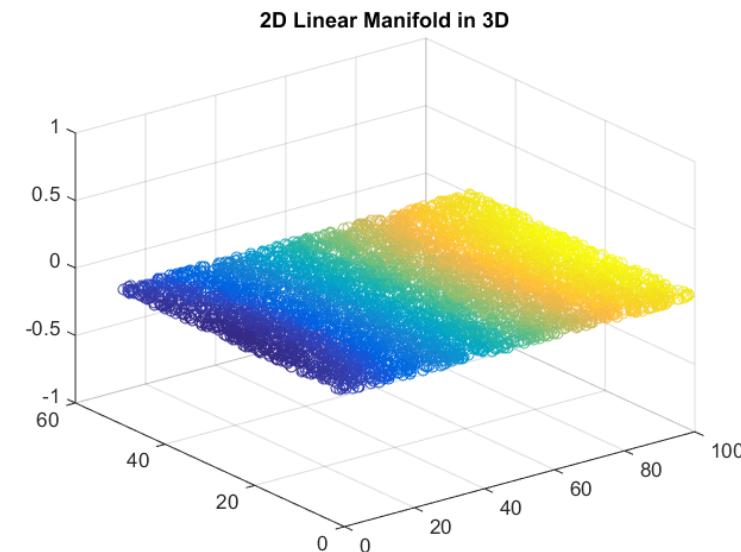

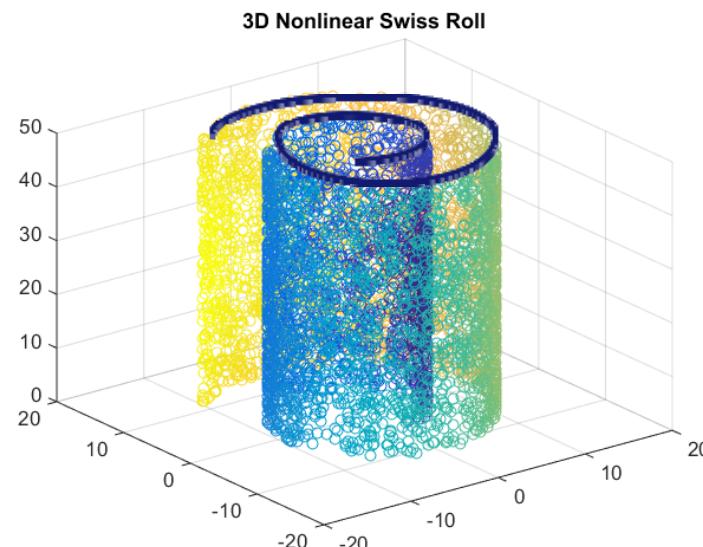

5-D Example

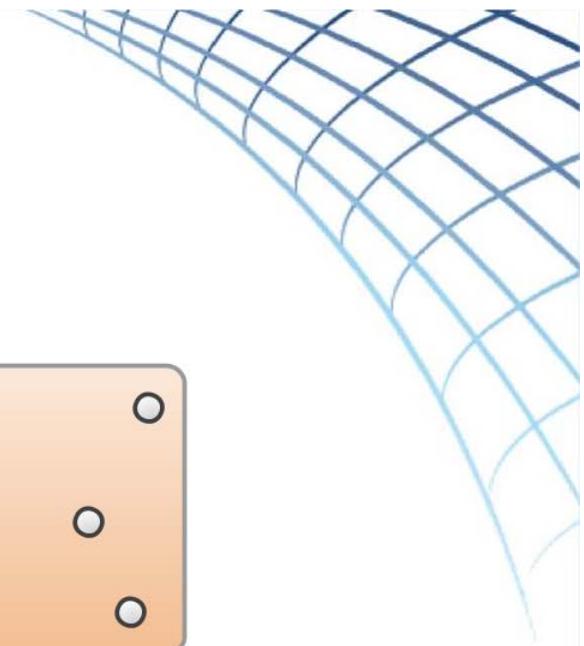

- Very effective to spot trends
- Supports interaction similar to the original PCP
- ...but fixed dimensionality

High-Dimensional Spaces

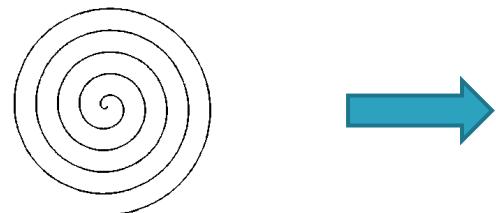

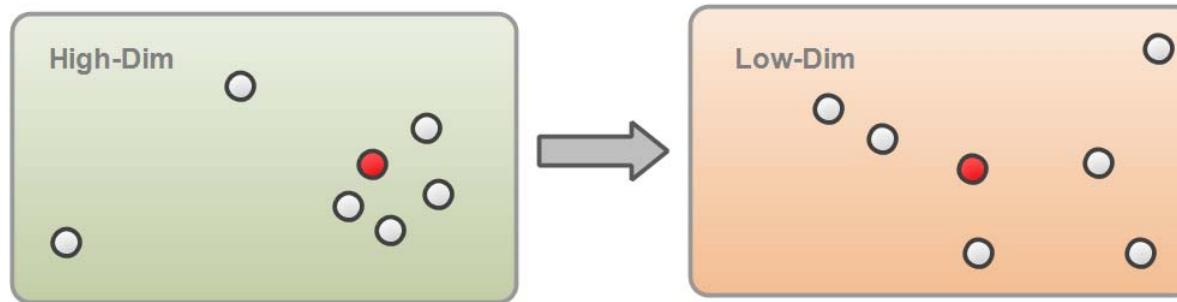

- A high dimensional space does not imply high dimensionality

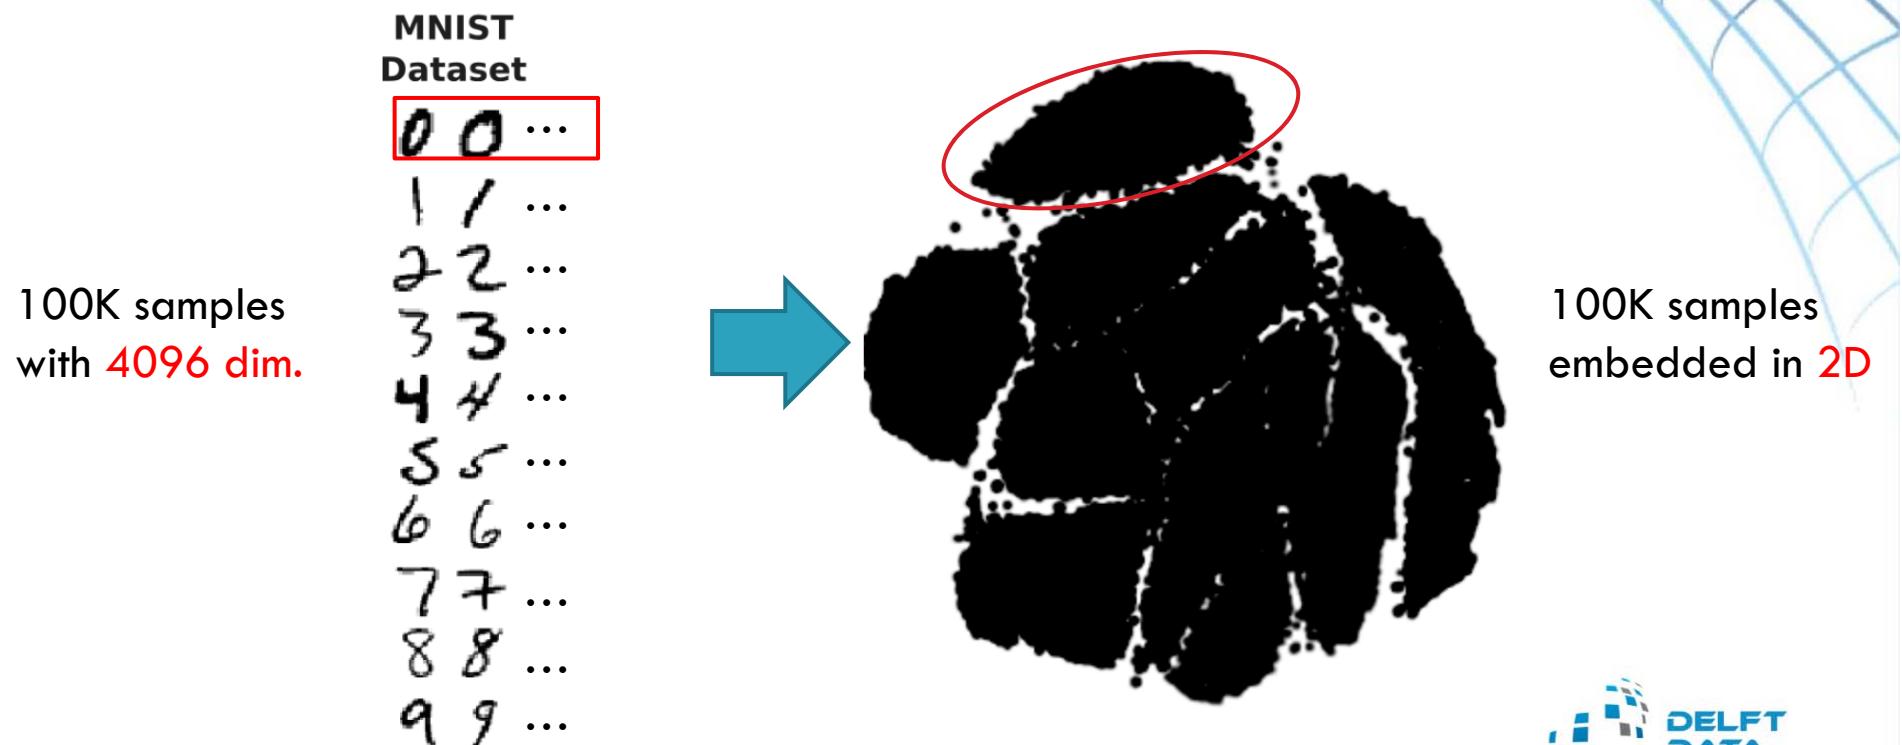

Multi-dimensional Embedding

- Reduce dimensions but maintain neighbors/distances

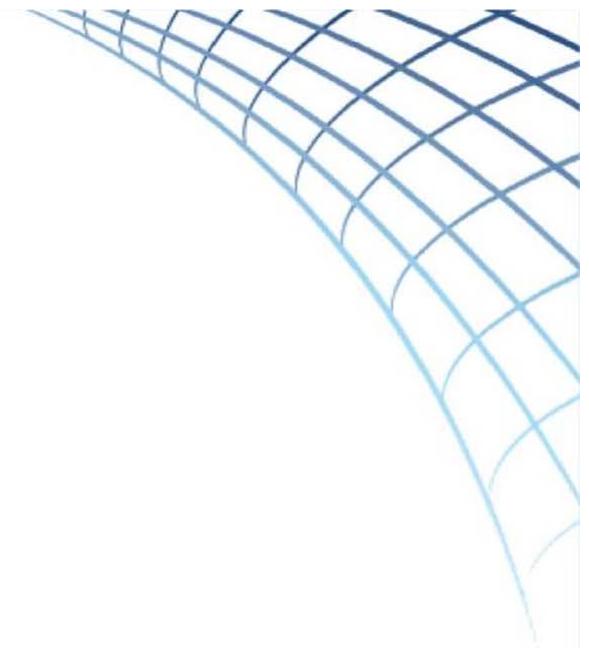

Example: Dimensionality Reduction

Challenges of Embedding

- Performance
 - Can be up to hours of calculation
- No Hierarchical information
 - Global embedding

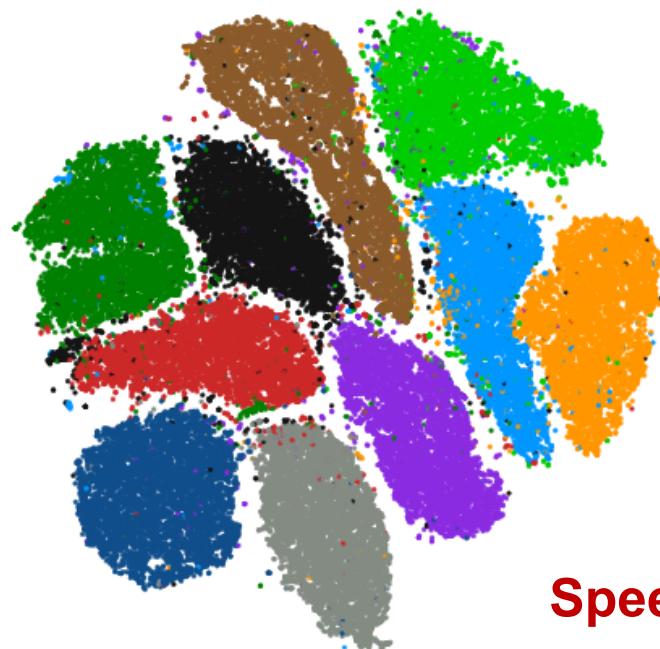

Challenges of Embedding

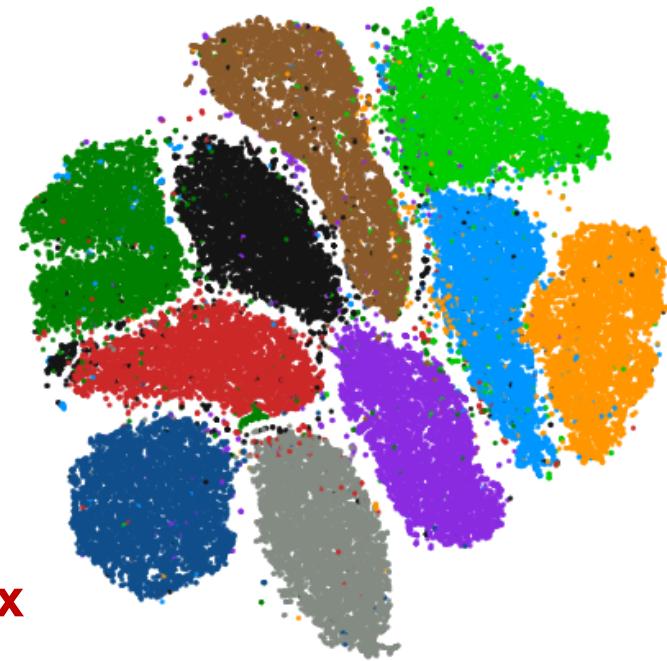

- Performance
 - Can be up to hours of calculation
- No Hierarchical information
 - Global embedding

[Pezzotti, Leliveldt, van der Maaten, Hoelt, Eisemann, Vilanova – TVCG2016]

Extreme Acceleration

tSNE
Time: 3191.8 s

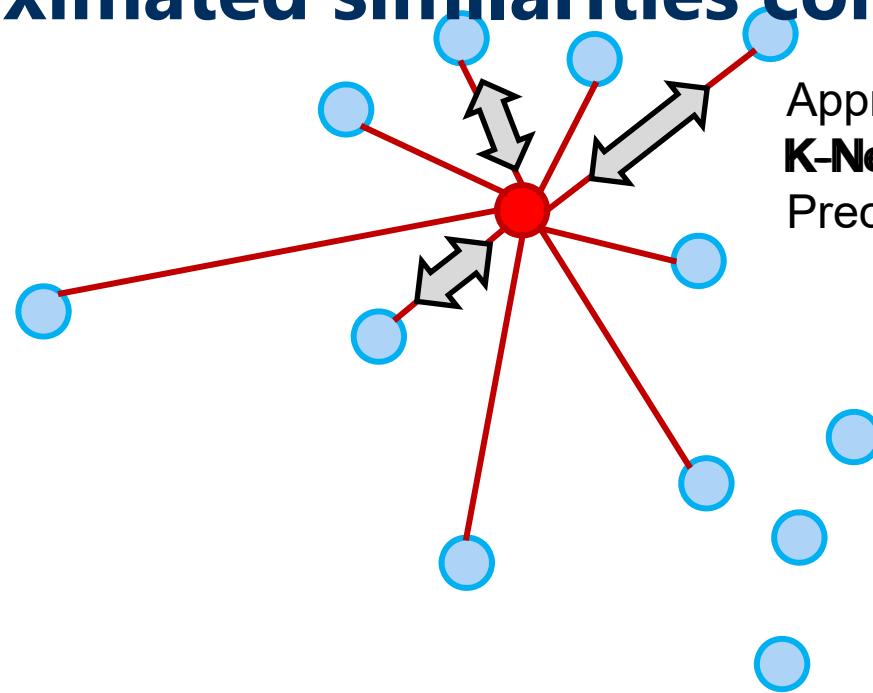

Speed up: 100x

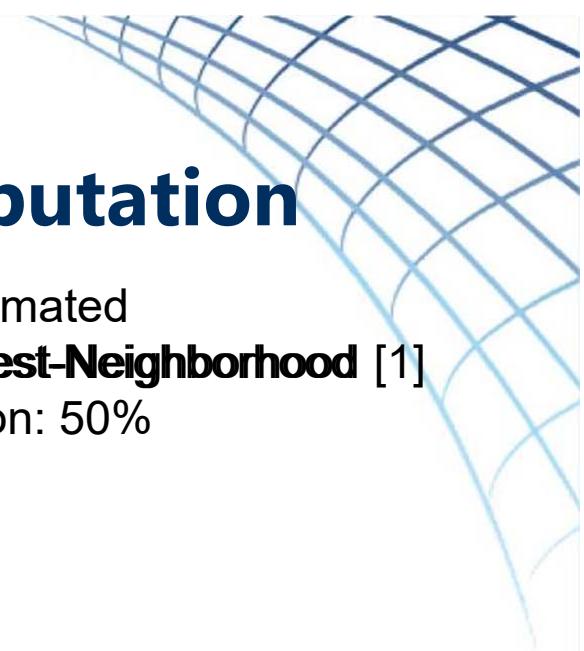

A-tSNE
Time: 30.1 s

Approximated similarities computation

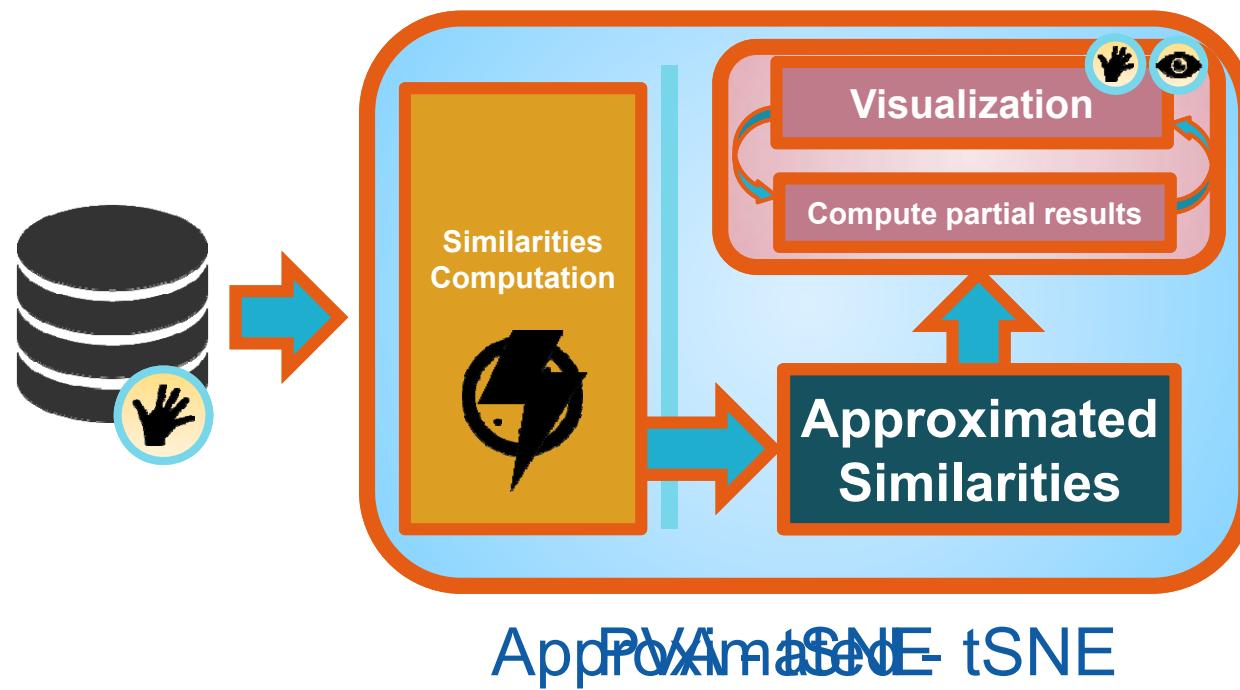

Approximated
K-Nearest-Neighborhood [1]
Precision: 50%

Fast Approximate Nearest Neighbors with Automatic Algorithm Configuration - Muja et al. - 2009

Approximated tSNE

Approximated tSNE

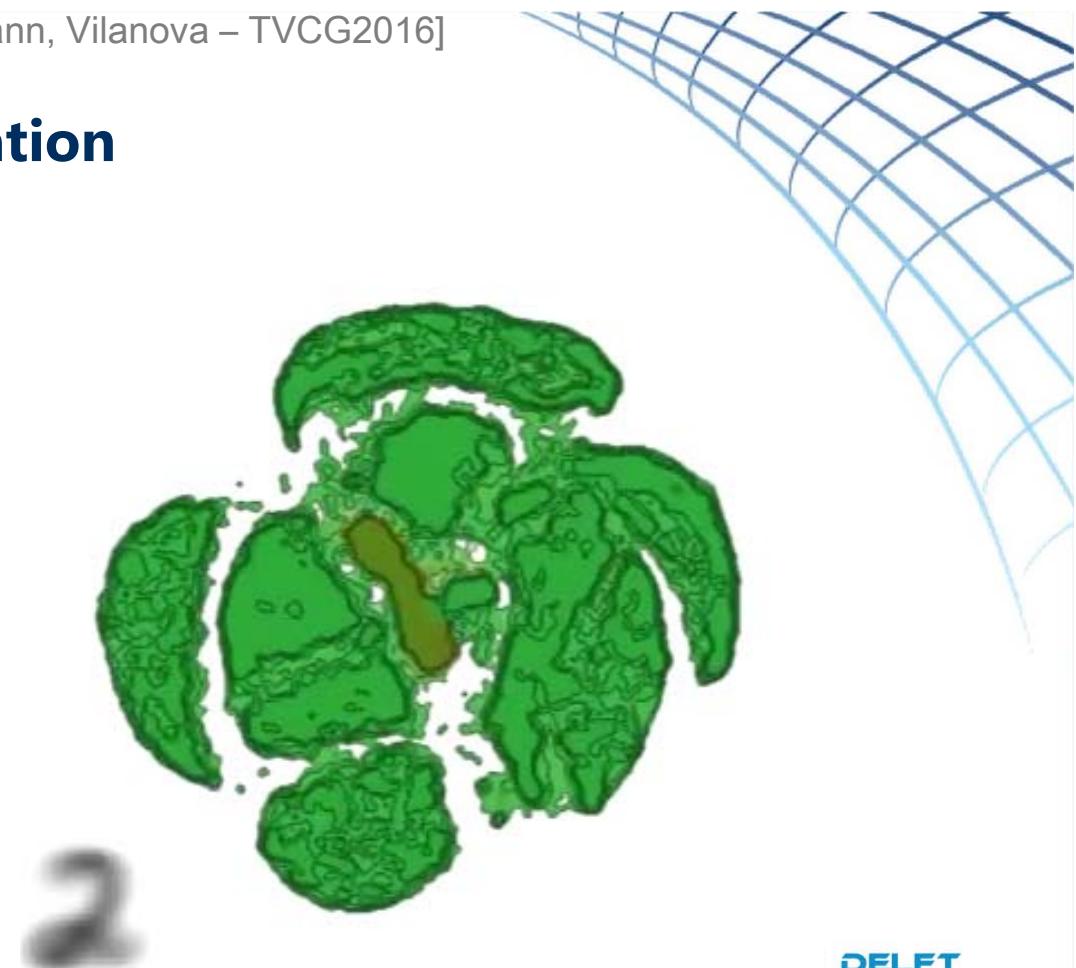

Koninklijk Instituut Van Ingenieurs

[Pezzotti, Leliveldt, van der Maaten, Hoelt, Eisemann, Vilanova – TVCG2016]

Steerability & Approximation

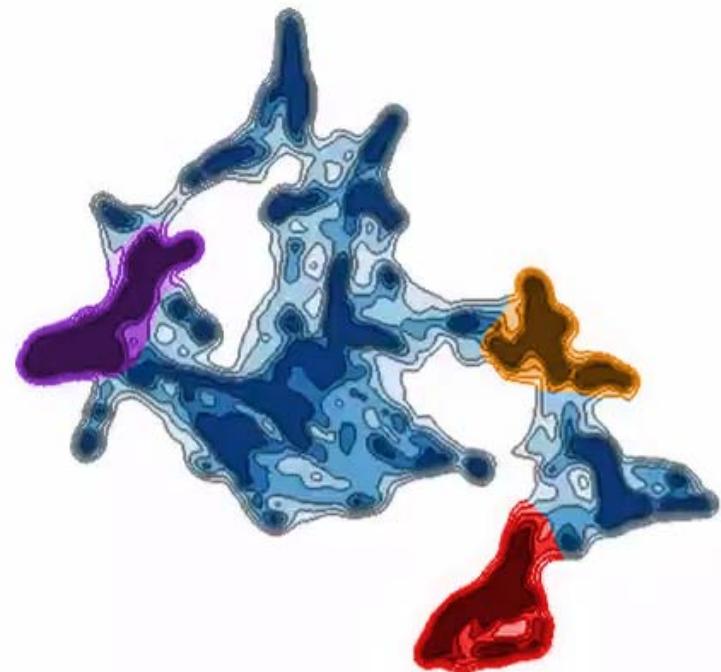

- Density-based visualization
 - Interaction support
 - Fast feedback and convergence

Preprocessing: 12 s (on purpose very low precision)

DELF
DATA
SCIENCE

Koninklijk Instituut Van Ingenieurs

Chest - Ankle - Wrist
52 Dimensions every 100 ms

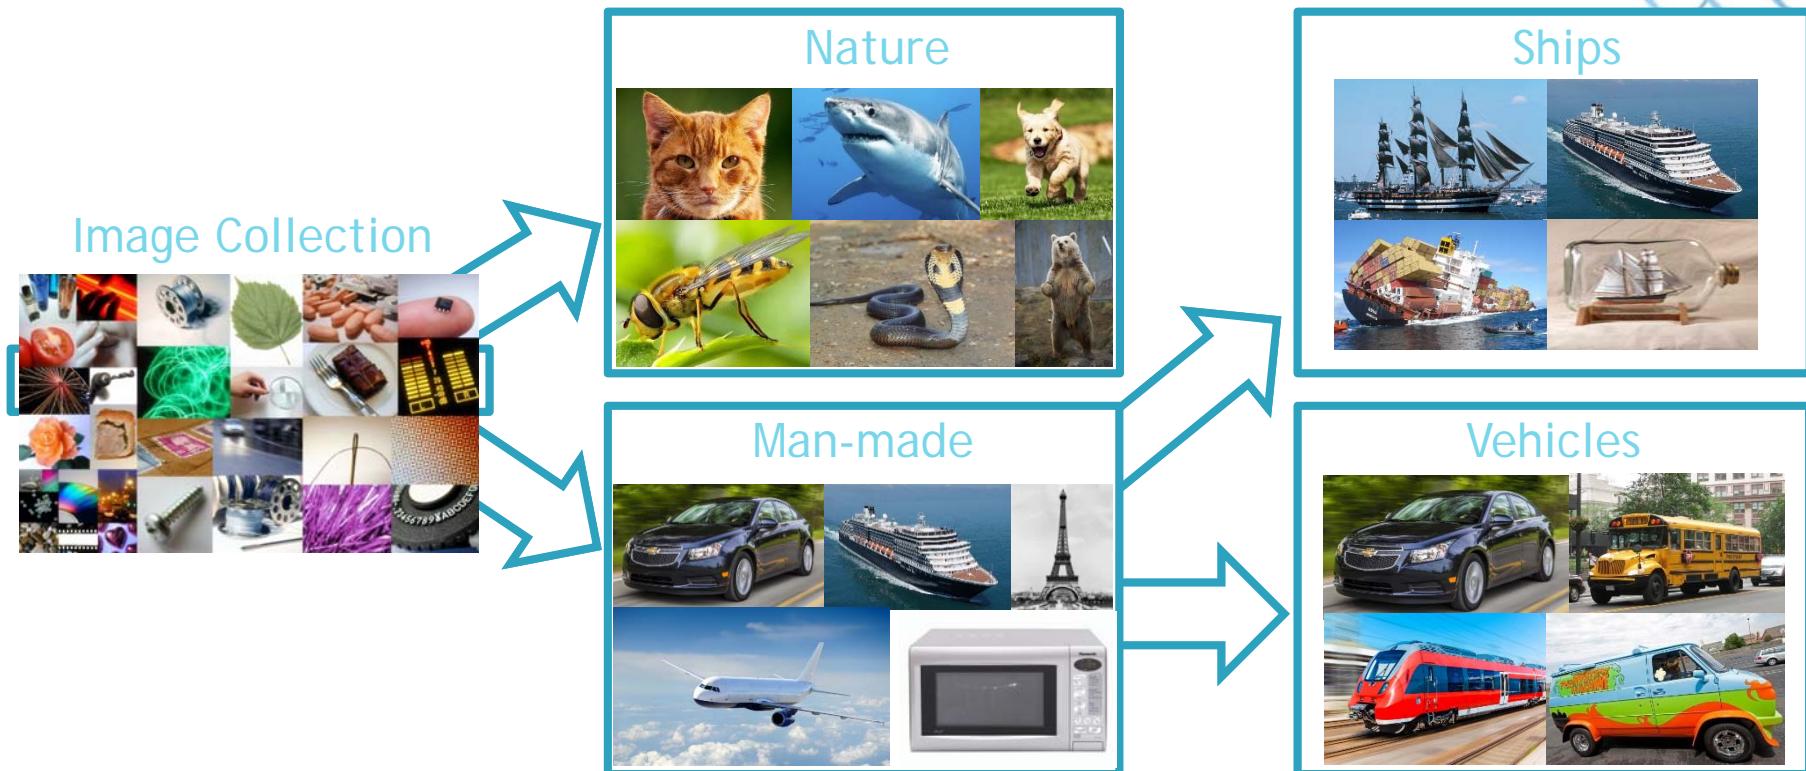

Challenges of Embedding

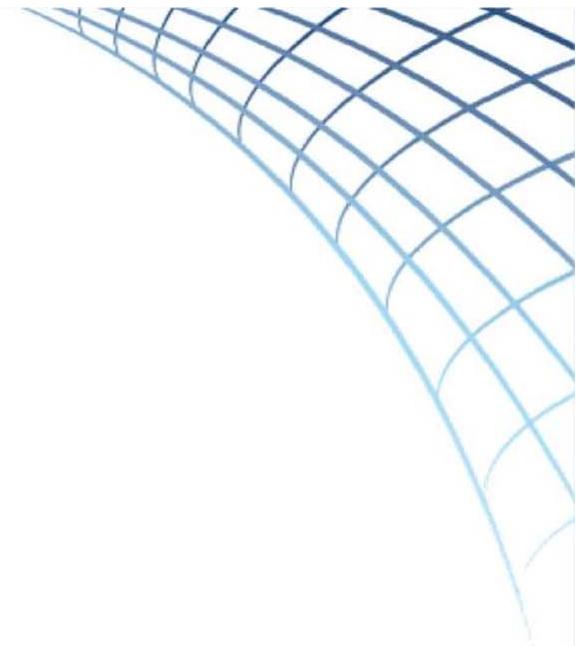

- Performance
 - Can be up to hours of calculation
- No Hierarchical information
 - Global embedding

How to structure data hierarchically without knowing about the hierarchy?

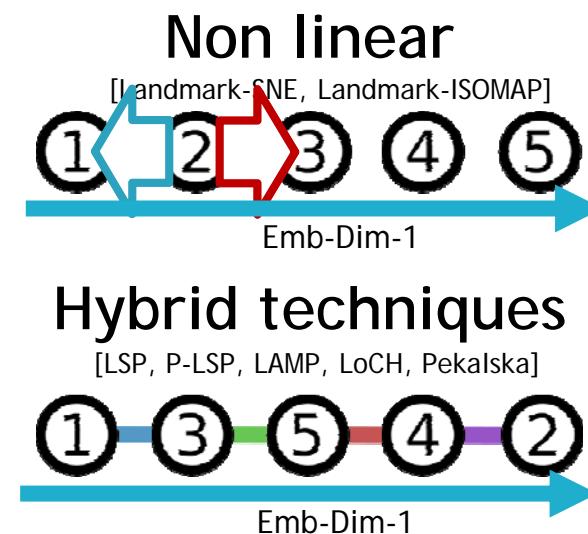

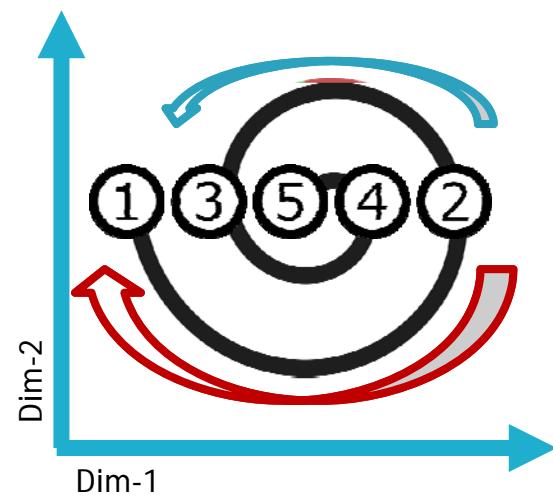

General Idea

- We want to find good representatives of each class
- Then subsample the data

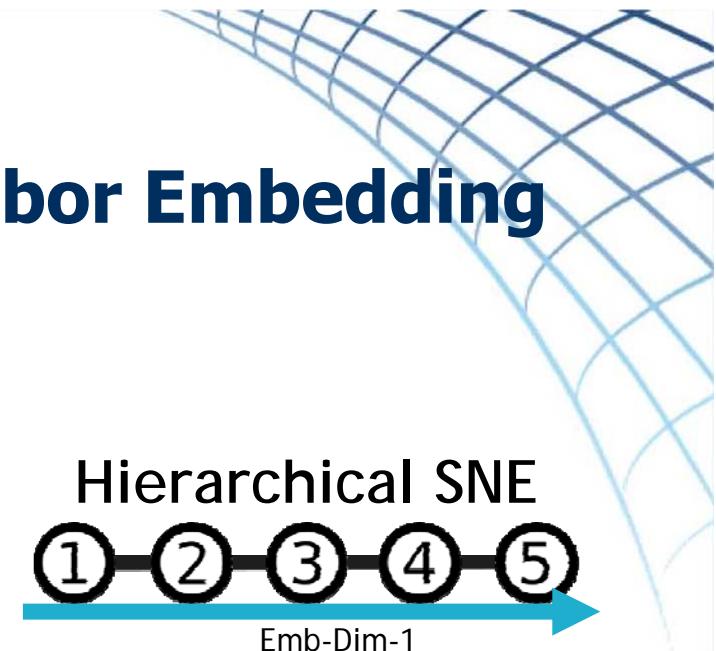

Non-Linear DR with Landmarks

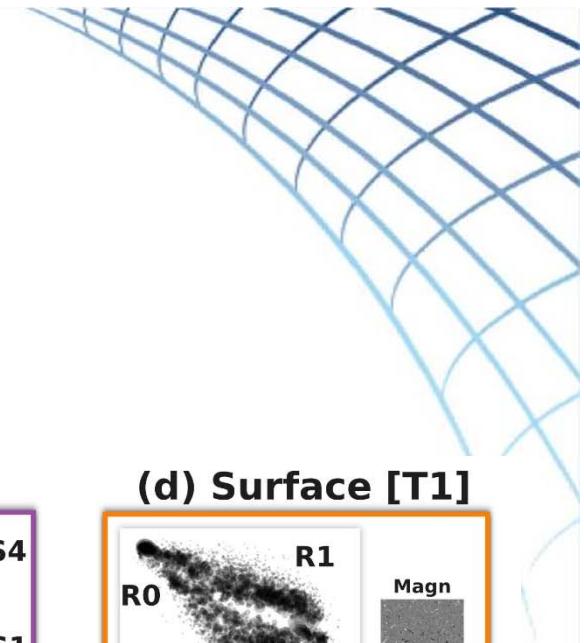

[Pezzotti, Hoelt, Leliveldt, Eisemann, Vilanova – EuroVis 2016]

Hierarchical Stochastic Neighbor Embedding

- Multiscale Dimensionality Reduction
 - Non-linear DR
 - Landmark based
- Hierarchical exploration of the data
 - Overview-first & Details-on-Demand
 - Filter & Drill-in

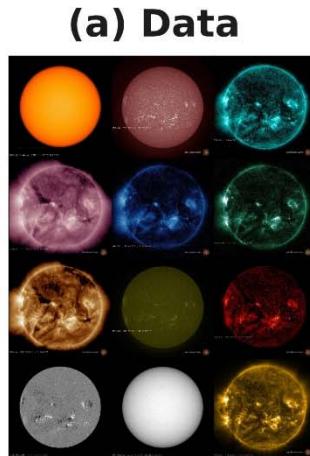

[Pezzotti, Hoelt, Leliveldt, Eisemann, Vilanova – EuroVis 2016]
[Pezzotti, Leliveldt, van der Maaten, Hoelt, Eisemann, Vilanova – TVCG2016]

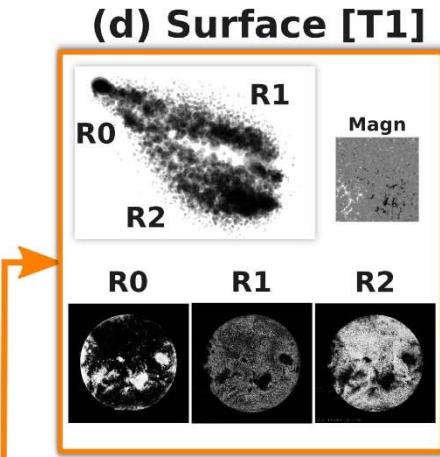

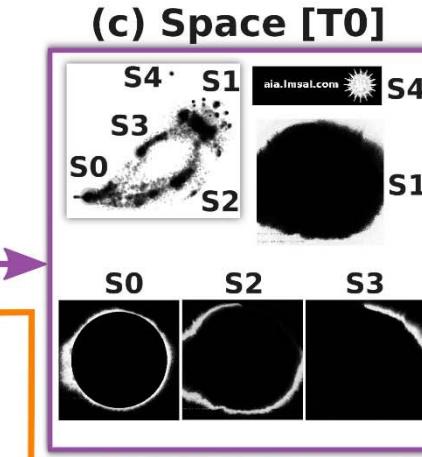

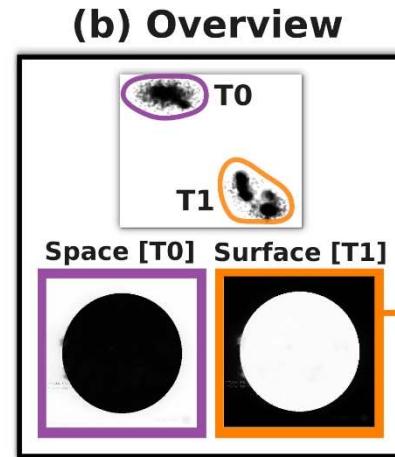

Hierarchical Dimensionality Reduction

- Organize Data at Different Scales

Sun

(a) Data

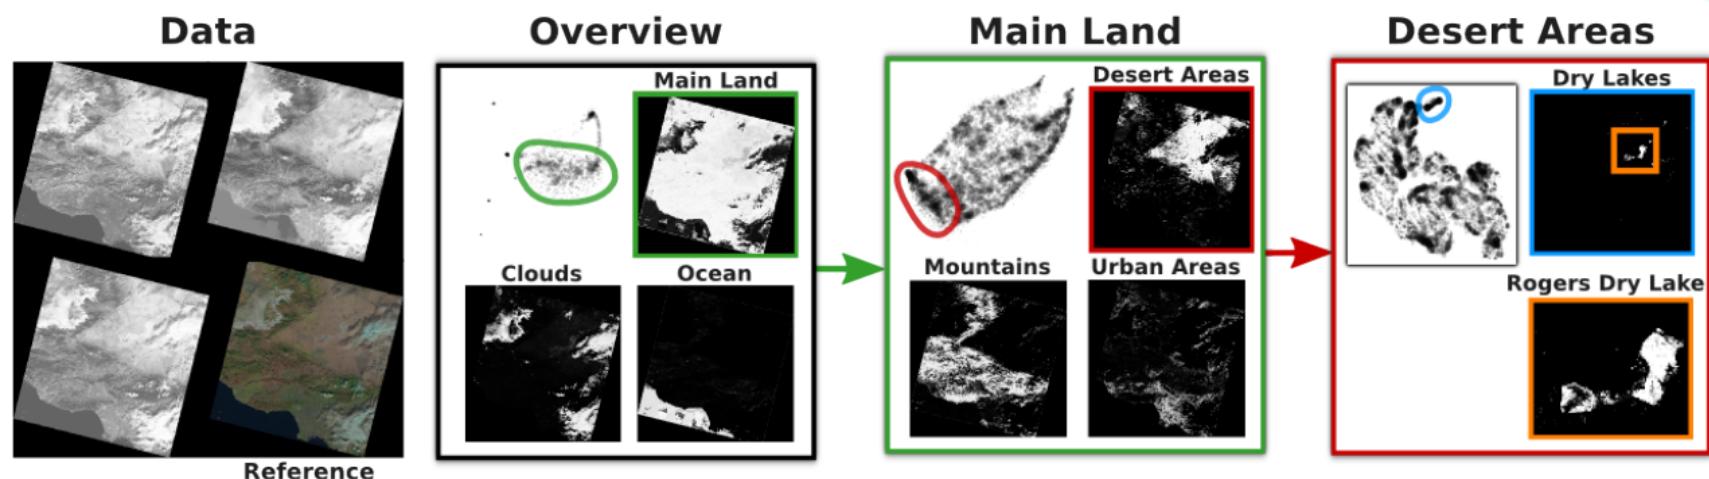

[Pezzotti, Hoelt, Leliveldt, Eisemann, Vilanova – EuroVis 2016]
[Pezzotti, Leliveldt, van der Maaten, Hoelt, Eisemann, Vilanova – TVCG2016]

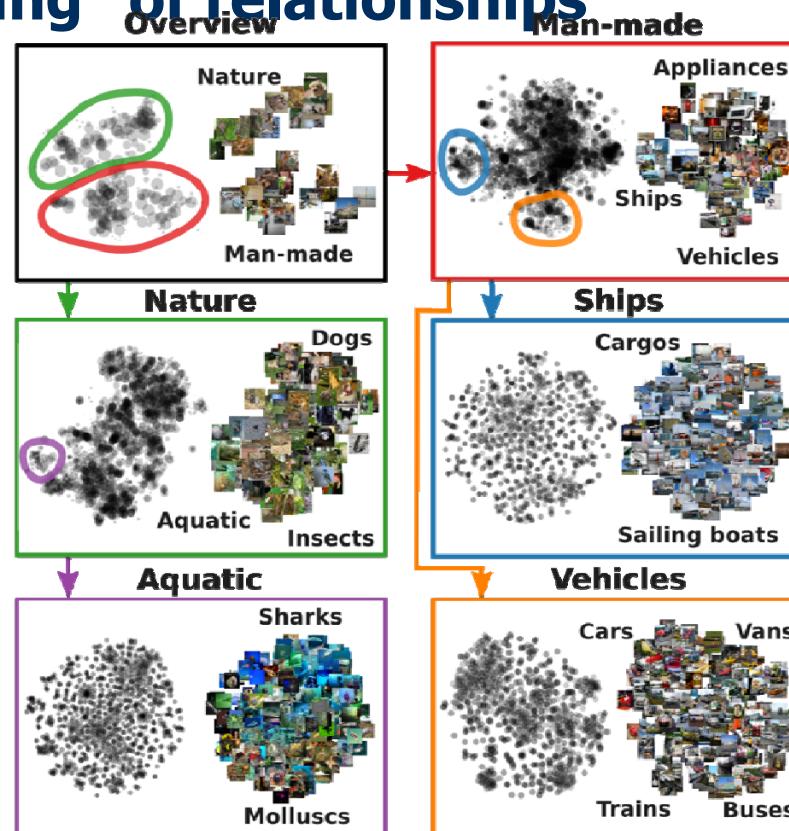

Hierarchical Dimensionality Reduction

- Organize Data at Different Scales

“Understanding” of relationships

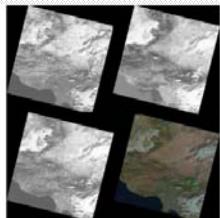

Effective Data Visualization Requires

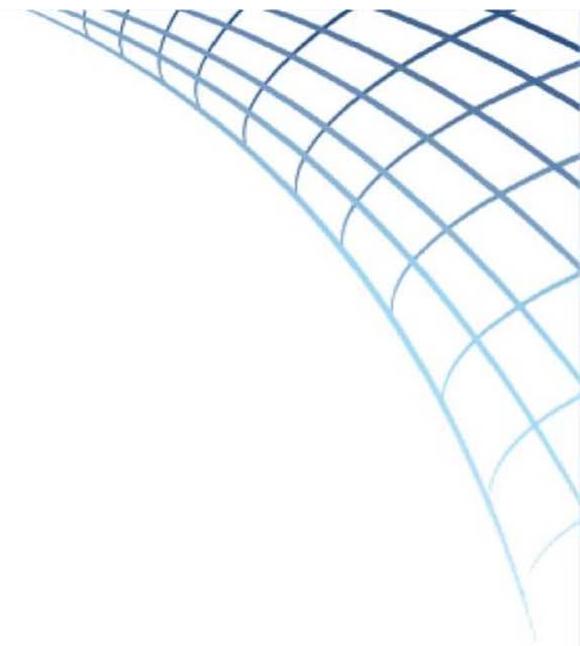

- **Large-Scale Rendering**

- **Visualization and Perception**

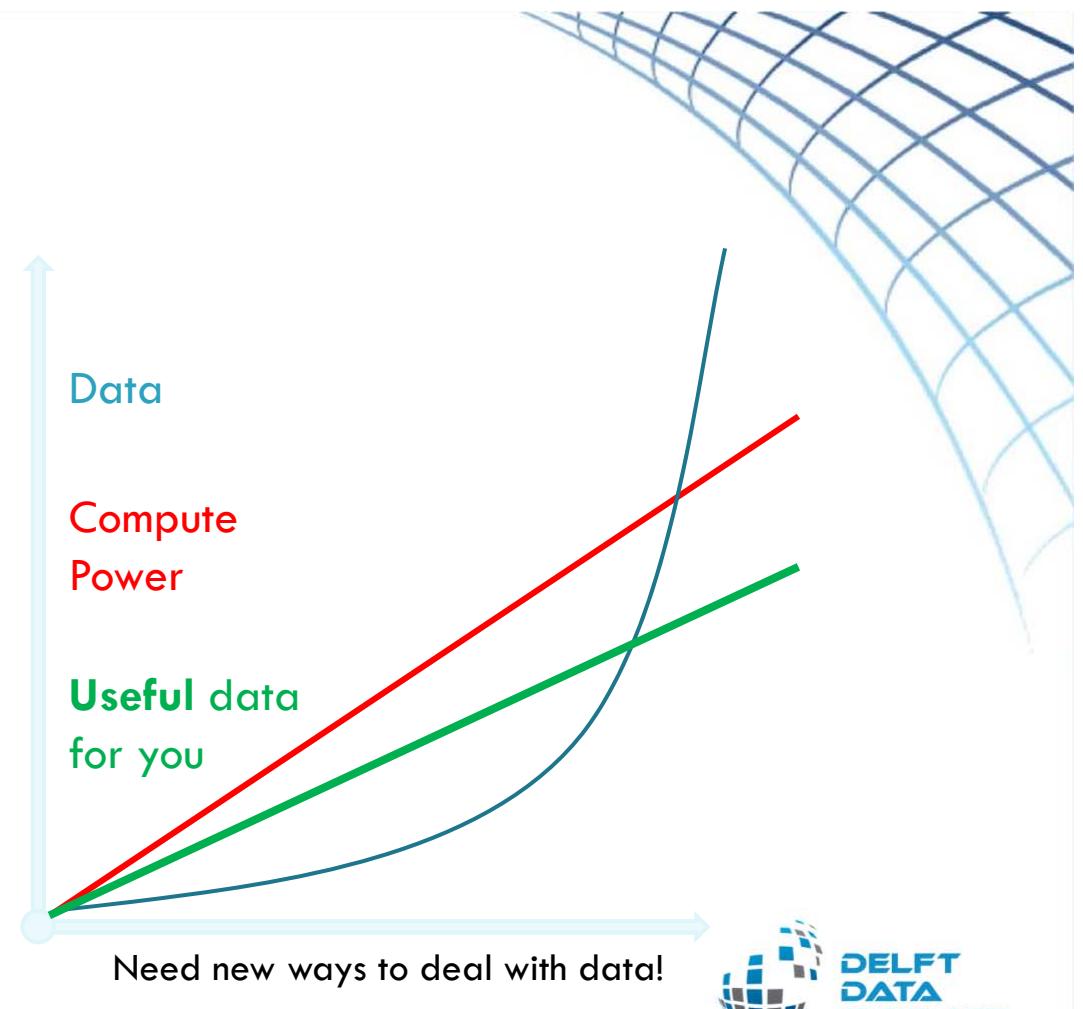

- **Data Analysis**

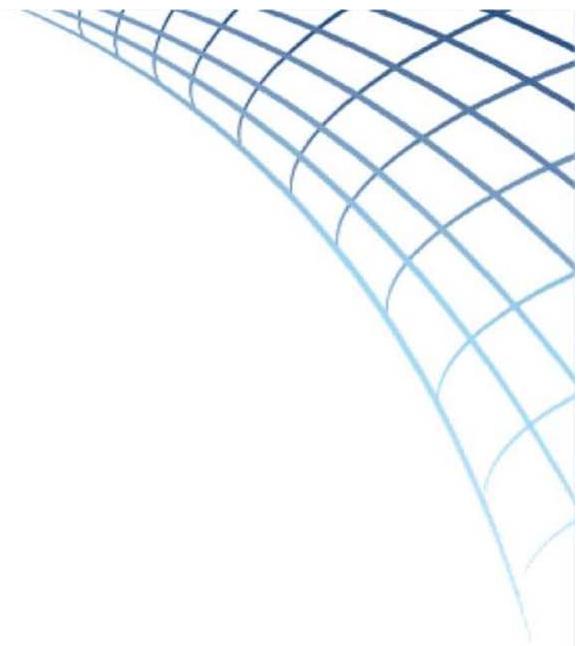

Data Development

- Processing
- Analysis
- Interaction
- Visualization
- Guidance

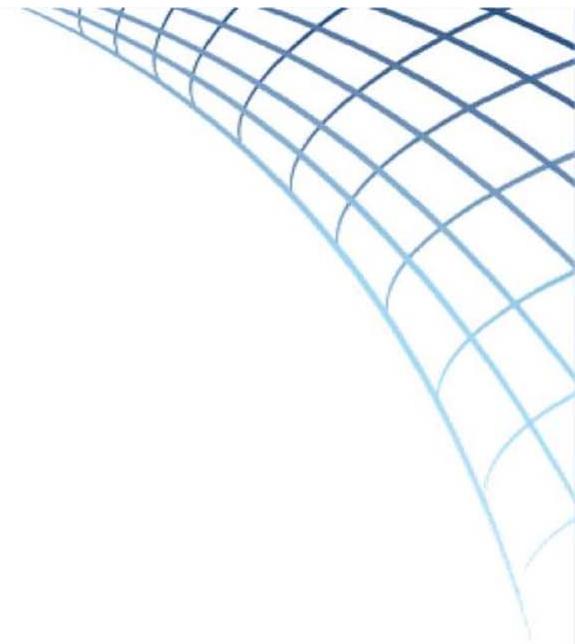

Large-Scale Rendering

- Ray Tracing
- Graphics Pipeline
- Specialized Methods for Different Data Types
 - Height-Field Data, Voxel Data, Data Management, Compression

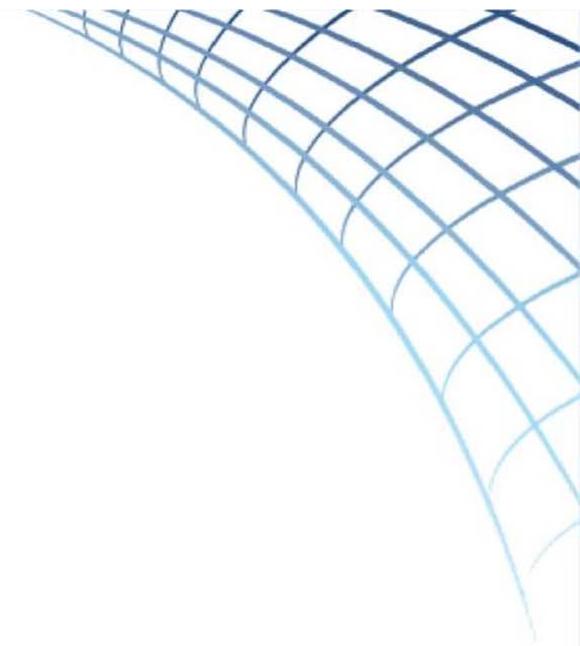

Visualization and Perception

- Realistic Rendering
- Perceptual Methods
- Visualization & Interface

Data Analysis

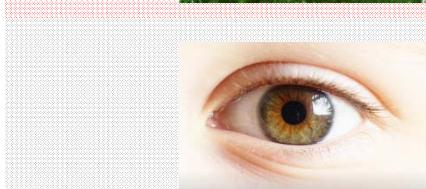

- High-dimensional/Heterogeneous Data
- Dimensionality Reduction
- Visual Analytics

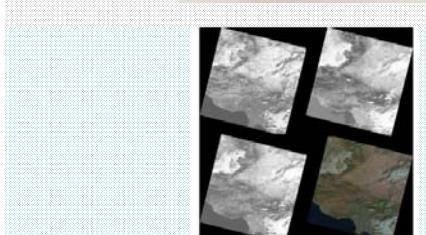

Effective Data Visualization Requires

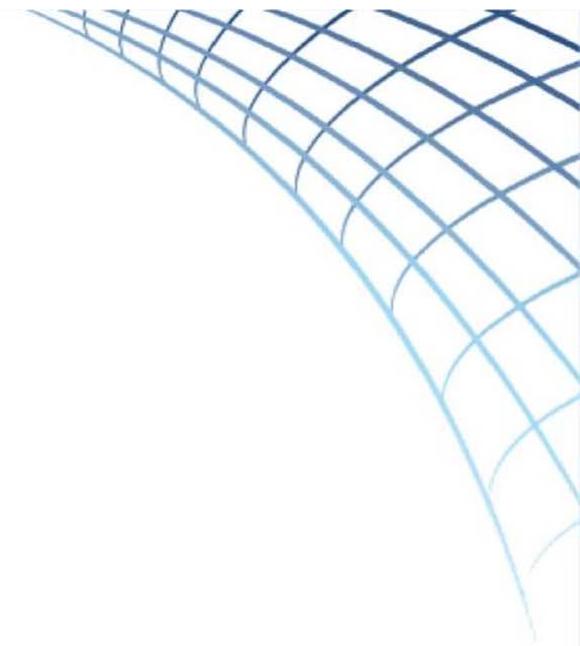

- **Large-Scale Rendering**

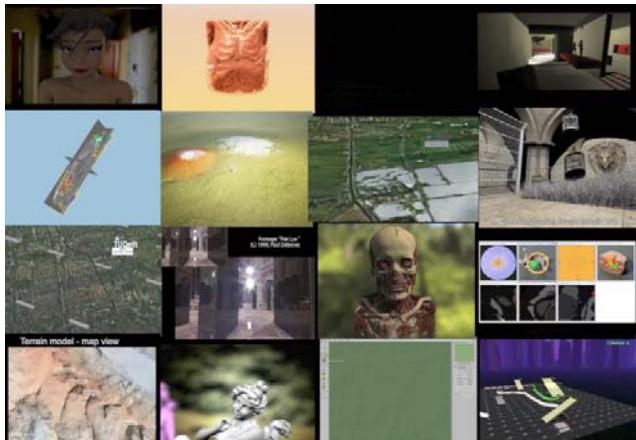

- **Visualization and Perception**

- **Data Analysis**
