

TICKETGUARD

Dynamic identification for daily access

We set a new standard within ticketing in a simple, safe and reliable way. By approaching ticketing in a disruptive way and change the roles in order to achieve a revolution in ticketing. By using the TigerID® we recognize people based on identity within an sustainable account-based ticket system.

Current

Ticketing is an centuries-old based concept. The organisations supply a ticket (token) to the end user, which comes with issues. This is a so-called ticket-based system, due to the value is locally stored.

Our approach

Ticket-based systems becomes account-based systems(ABS). Which means tickets become virtual and will be stored in the cloud where it is safe and in full control. The end user will be recognized based on identity by using the TigerID®, the digital dynamic ID-card. The TigerID® is a multimodal token, which can be used for nearly endless possibilities to replace regular tickets, employee- and visitors badges

TigerID® comes in two forms

TigerID® Security RSA 1024

When scan-speed counts

Wallet for easy control in all virtual tickets

TigerID® 3D Security RSA 2048

When user-identity is more important

- Works on every smartphone
- Works offline
- Changes every second
- Non reproduciable

- Can represent anything*
- Can be used anonymously
- Blockchain enabled

*what it will be presenting is stored in the cloud.

The TigerID works on every smartphone, changes every second and works totally offline. It can be used anonymously and represent anything since we store in the cloud what the end user will be doing. This results in an unprecedented total control for the organisation. That makes the TigerID useful for every moment in a simple, safe and reliable way in:
